Thank you for joining NEC Electronics’ webcast.
CAUTIONARY STATEMENTS:

The statements in this presentation with respect to the plans, strategies and forecasts of NEC Electronics and its consolidated subsidiaries (collectively “we”) are forward-looking statements involving risks and uncertainties. We caution you in advance that actual results could differ materially from such forward-looking statements due to several factors. The important factors that could cause actual results to differ materially from such statements include, but are not limited to: general economic conditions in our markets, which are primarily Japan, North America, Asia and Europe; demand for, and competitive pricing pressure on, our products and services in the marketplace; our ability to continue to win acceptance of its products and services in these highly competitive markets; and movements in currency exchange rates, particularly the rate between the yen and the U.S. dollar. Among other factors, a worsening of the world economy; a worsening of financial conditions in the world markets, and a deterioration in the domestic and overseas stock markets, would cause actual results to differ from the projected results forecast.

Before we start, please be sure to review the cautionary statements carefully.
Executive Summary

I. Q3 FY07/3 Financial Results

- Semiconductor sales were in line with initial expectations but operating losses were greater than expected due to changes in the product mix.

II. FY07/3 Financial Forecasts and Measures to Improve Profitability

- Q4 results are expected to worsen from Q3 levels, as sales and profits will fall short of targets due to adjustments for LCD panels and PC peripherals.
- NEC Electronics is currently considering plans for structural reform and strategies for growth, which it intends to announce on February 22nd. Consequently, costs associated with these reforms are also being determined, and forecasts for the fiscal year remain unchanged for the time being.

Slide 3 shows a summary of today’s presentation.

Semiconductor sales for the third quarter were in line with initial expectations, driven by strong demand for chips for consumer electronics applications. However, operating losses were larger than expected due to changes in the product mix.

Fourth quarter sales and gross profits are not expected to meet targeted levels, leading to higher operating losses in the fourth quarter. However, as costs associated with structural reforms are still under consideration, the full-year financial forecasts remain unchanged for the time being.

NEC Electronics plans to announce growth strategies and structural reform plans on February 22nd.
Let us review the financial results for the third quarter.
Slide 5 shows a summary of results for the third quarter.

Semiconductor sales were 171.1 billion yen, an increase of 14.4 billion yen year on year, and 1.4 billion yen quarter on quarter. On a nine-month cumulative basis, sales increased 41.8 billion yen, or 9 percent, totaling 498.9 billion yen.

Operating losses were 3.8 billion yen. This was a 3.2 billion yen year-on-year improvement, but was still 2.7 billion yen worse than the previous quarter. On a nine-month cumulative basis, operating losses totaled 10.8 billion yen, an 8.4 billion yen improvement.

We recorded losses for EBT in the amount of 3.5 billion yen, and net loss of 5.8 billion yen.

Free cash flows for the third quarter were negative 7.6 billion yen, but on a nine-month cumulative basis, they were positive 5.8 billion yen.

Shareholder’s equity ratio was 39%.
Slide 6 shows trends in quarterly results.

Profits improved steadily through the second quarter, when operating losses were 1.2 billion yen. However, stagnant sales growth and changes in the product mix resulted in larger operating losses in the third quarter.
Slide 7 shows year-on-year changes in sales, by platform.

Third quarter sales grew 9% year on year, due to increases in sales of game console chips, and automotive and All Flash™ microcontrollers.
The next slide shows quarter-on-quarter changes in sales, by platform.

Third quarter sales grew only slightly from the previous quarter, unlike the strong growth shown year-on-year.
Slide 9 shows sales growth by application.

The Consumer Electronics segment showed strong growth both yearly and quarterly, boosting overall semiconductor sales, but Communications and Computing and Peripherals showed decreases in sales both year on year and quarter on quarter.
Slide 10 shows year-on-year and quarter-on-quarter changes in profits for the third quarter.

Year-on-year, higher semiconductor sales and gross profit margins contributed to improvements in profitability, but an increase in R&D expenses necessary for future growth resulted in operating loss.

On a quarterly basis, we expected that operating losses in the third quarter would be similar to those in the second quarter. Although semiconductor sales for the third quarter were as expected, sales of products with lower gross profit margins increased more than expected, and led to greater operating losses for the third quarter.
The next slide shows the company’s balance sheet.

Inventories increased by approximately 6 billion yen from the end of September. This was mainly due to year-end inventory increases in North America and Europe. We will lower inventories to optimal levels by the end of March, by adjusting production levels during the fourth quarter.

Slide 12 shows cash flows.
Free cash flows for the third quarter were negative 7.6 billion yen. This was mainly due to capital expenditures in the amount of 37.8 billion yen related to capacity expansion for the 300mm wafer line.
Next, we will address the company’s outlook for the fiscal year ending March 2007, and measures to improve profitability.
Slide 14 shows the current forecasts for the fiscal year, which we announced on October 25.

These forecasts will remain unchanged for the time being, but as we will explain in greater detail in the following slides, fourth quarter sales are expected to decline, making it inevitable that the company will post operating losses.

However, the amount of non-operating losses is still unclear, and operating losses themselves may be affected by the structural reforms currently under consideration. Therefore, we have decided not to revise the forecasts at this time.

I intend to explain our plan for reform on February 22nd. Forecasts will be announced in a timely manner, once the costs associated with reforms have been determined.
Decline in Q4 Profitability (on operating basis)

- **Decrease in semiconductor sales**
  - Q4 semiconductor sales are expected to be less than Q3 levels
    - SoC Platform: Decrease in sales due to adjustments of PC peripherals
    - Display Driver ICs: Decrease in sales due to production adjustments by customers and price declines

- **Manufacturing adjustments (lower utilization rates)**
  - Adjust manufacturing levels in response to slowing demand and higher-than-optimal inventory levels for December
  - | Utilization Rates | Q3 | Q4 |
  - |-------------------|----|----|
  - |                   | > 90% | approx. 80% |

- **Additional costs for structural reforms**
  - Currently under consideration. To be announced February 22nd.

The next slide explains factors expected to cause operating losses to increase in the fourth quarter.

First, semiconductor sales in the fourth quarter are expected to be affected by adjustments in LCD drivers and PC peripherals, which would lead to a decline by several percentage points.

Second, operating profits will be affected as production levels are adjusted to respond to declining demand and bring inventories to optimal levels.

Third, to address such deterioration in financial performance, NEC Electronics is currently considering plans for structural reforms, which in turn are likely to affect operating losses.
Slide 16 shows the company’s understanding of the challenges it faces, which will be addressed by the structural reforms.

Until now, the company aimed to expand sales evenly across its different product types, and sales for the nine months ended December 31, 2006 did grow 10% year on year.

Although we increased R&D spending and CAPEX for capacity expansion in the hopes of sustaining double-digit sales growth, we do not believe we can sustain such growth or improve profits in the near term.
Now let’s take a look at slide 17.

Taking into consideration the previous conditions, as well as the softening of the semiconductor market which is expected through the first half of next fiscal year, I feel it is necessary to implement some structural reforms in order to achieve new growth.

Although we cannot announce a detailed plan until February 22nd, fundamentally there will be two key points – expanding sales, and improving cost competitiveness.

Until now, the company had scattered its R&D resources across all of its various product lines, but as a result, resources were spread too thin and it was difficult to develop products that were competitive enough to win new business. As a first step toward expanding sales, the company needs to identify and focus on its “core” products, which should help win new business.

We will also re-evaluate manufacturing operations, particularly for mature products, which are facing stiff pricing pressure. As a first step, I think it will be necessary to actively shift manufacturing of these products overseas.
In closing today, I would like to reiterate that NEC Electronics is currently considering structural reforms, and will announce management and sales strategies on February 22nd.

As prospects for achieving operating profits in the second half of the fiscal year are slim, I understand the concern among our shareholders and stakeholders, and would like to ask for your understanding and patience as we carefully consider our plans for reform.
This concludes our presentation today. Thank you for joining us.
