

ISL80101-ADJ

High Performance 1A LDO

FN7834  
Rev.4.00  
Aug 21, 2020

The [ISL80101-ADJ](#) is a low voltage, high current, single output LDO specified at 1A output current. This LDO operates from input voltages from 2.2V to 6V, and is capable of providing output voltages from 0.8V to 5V. The ISL80101-ADJ features an adjustable output.

A submicron BiCMOS process is utilized for this product family to deliver the best in class analog performance and overall value. This CMOS LDO will consume significantly lower quiescent current as a function of load compared to bipolar LDOs, which translates into higher efficiency and packages with smaller footprints. State of the art internal compensation achieves a very fast load transient response. An external capacitor on the soft-start pin provides an adjustable soft-starting ramp. The ENABLE feature allows the part to be placed into a low quiescent current shutdown mode. A Power-good logic output signals a fault condition.

[Table 1](#) shows the differences between the ISL80101-ADJ and others in its family:

TABLE 1. KEY DIFFERENCES BETWEEN FAMILY OF PARTS

PART NUMBER	PROGRAMMABLE I <sub>LIMIT</sub>	I <sub>LIMIT</sub> (DEFAULT)	ADJ OR FIXED V <sub>OUT</sub>
ISL80101-ADJ	No	1.75A	ADJ
ISL80101A	Yes	1.62A	ADJ
ISL80121-5	Yes	0.75A	5.0V

Features

- ±1.8% V<sub>OUT</sub> accuracy guaranteed over line, load and T<sub>J</sub> = -40 °C to +125 °C
- Very low 130mV dropout voltage at V<sub>OUT</sub> = 2.5V
- Very fast transient response
- Programmable soft-starting
- Power-good output
- Excellent 65dB PSRR
- Current limit protection
- Thermal shutdown function
- Available in a 10 Ld DFN package
- Pb-Free (RoHS compliant)

Applications

- DSP, FPGA and μP core power supplies
- Noise-sensitive instrumentation systems
- Post regulation of switched mode power supplies
- Industrial systems
- Medical equipment
- Telecommunications and networking equipment
- Servers
- Hard disk drives (HD/HDD)

### NOTES:

1. Please see [TB347](#) for details about reel specifications.
2. For other output voltages, contact Marketing.
3. These Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J-STD-020.
4. For Moisture Sensitivity Level (MSL), see the [ISL80101-ADJ](#) device information page. For more information about MSL, see [TB363](#).

## Pin Configurations

## Pin Descriptions

PIN NUMBER	PIN NAME	DESCRIPTION
1, 2	V <sub>OUT</sub>	Regulated output voltage. A X5R/X7R output capacitor is required for stability. See <a href="#">“External Capacitor Requirements” on page 8</a> for more details.
3	ADJ	This pin is connected to the feedback resistor divider and provides voltage feedback signals for the LDO to set the output voltage. In addition, the PGOOD circuit uses this input to monitor the output voltage status.
4	PG	This is an open-drain logic output used to indicate the status of the output voltage. Logic low indicates V <sub>OUT</sub> is not in regulation. Must be grounded if not used.
5	GND	Ground
6	SS	External capacitor on this pin adjusts start-up ramp and controls inrush current.
7	ENABLE	V <sub>IN</sub> independent chip enable. TTL and CMOS compatible.
8	NC	No connection; Leave floating.
9, 10	V <sub>IN</sub>	Input supply; A minimum of 10μF X5R/X7R input capacitor is required for proper operation. See <a href="#">“External Capacitor Requirements” on page 8</a> for more details.
-	EPAD	EPAD at ground potential. It is recommended to solder the EPAD to the ground plane.

## Absolute Maximum Ratings

$V_{IN}$ Relative to GND (Note 5)	-0.3V to +6.5V
$V_{OUT}$ Relative to GND (Note 5)	-0.3V to +6.5V
PG, ENABLE, ADJ, SS	
Relative to GND (Note 5)	-0.3V to +6.5V
ESD Rating	
Human Body Model (Tested per JESD22 A114F)	2.5kV
Charge Device Model (Tested per JESD22-C101C)	2kV
Latch-up (Tested per JESD78C, Class 2, Level A)	$\pm 100$ mA at +125°C

## Thermal Information

Thermal Resistance (Typical)	$\theta_{JA}$ (°C/W)	$\theta_{JC}$ (°C/W)
10 Ld DFN Package (Notes 6, 7)	48	7
Storage Temperature Range	-65°C to +150°C	
Junction Temperature	+150°C	
Pb-Free Reflow Profile	see <a href="#">TB493</a>	

## Recommended Operating Conditions (Notes 8, 9)

Junction Temperature Range ( $T_J$ ) (Note 8)	-40°C to +125°C
$V_{IN}$ Relative to GND	2.2V to 6V
$V_{OUT}$ Range	800mV to 5V
PG, ENABLE, ADJ, SS relative to GND	0V to 6V
PG Sink Current	<10mA

**CAUTION:** Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions can adversely impact product reliability and result in failures not covered by warranty.

### NOTES:

- ABS max voltage rating is defined as the voltage applied for a lifetime average duty cycle above 6V of 1%.
- $\theta_{JA}$  is measured in free air with the component mounted on a high effective thermal conductivity test board with direct attach features. See [TB379](#).
- For  $\theta_{JC}$ , the case temperature location is the center of the exposed metal pad on the package underside.
- Extended operation at these conditions may compromise reliability. Exceeding these limits will result in damage. Recommended operating conditions define limits where specifications are guaranteed.
- Electromigration specification defined as lifetime average junction temperature of +110°C where max rated DC current = lifetime average current.

**Electrical Specifications** Unless otherwise noted, 2.2V <  $V_{IN}$  < 6V,  $V_{OUT}$  = 0.5V,  $T_J$  = +25°C. Applications must follow thermal guidelines of the package to determine worst case junction temperature. See ["Applications Information" on page 8](#) and [TB379](#).

**Boldface limits apply across the operating temperature range, -40°C to +125°C.**

NOTES:

- Compliance to datasheet limits is assured by one or more methods: production test, characterization and/or design.
- Dropout is defined as the difference in supply  $V_{IN}$  and  $V_{OUT}$  when the supply produces a 2% drop in  $V_{OUT}$  from its nominal voltage.
- $I_{PD}$  is the internal pull down current that discharges the external SS capacitor on disable.  $I_{CHG}$  is the current from the SS pin that charges the external SS capacitor during start-up.

# Typical Operating Performance

Unless otherwise noted:  $V_{IN} = 2.2V$ ,  $V_{OUT} = 1.8V$ ,  $C_{IN} = C_{OUT} = 10\mu F$ ,  $T_J = +25^\circ C$ ,  $I_L = 0A$ .

## Applications Information

### Input Voltage Requirements

ISL80101-ADJ is capable of delivering output voltages from 0.8V to 5.0V. Due to the nature of an LDO,  $V_{IN}$  must be some margin higher than  $V_{OUT}$  plus dropout at the maximum rated current of the application if active filtering (PSRR) is expected from  $V_{IN}$  to  $V_{OUT}$ . The very low dropout specification of this family of LDOs allows applications to design for a level of efficiency that can accommodate profiles smaller than the TO220/263.

### Enable Operation

The Enable turn-on threshold is typically 800mV with 80mV of hysteresis. This pin must not be left floating, and should be tied to  $V_{IN}$  if not used. A 1k $\Omega$  to 10k $\Omega$  pull-up resistor is required for applications that use open collector or open-drain outputs to control the Enable pin. An internal pull-up or pull-down resistor to change these values is available upon request. The Enable pin may be connected directly to  $V_{IN}$  for applications with outputs that are always on.

### Power-Good Operation

PG is a logic output that indicates the status of  $V_{OUT}$ . The PG flag is an open-drain NMOS that can sink up to 10mA. It requires an external pull-up resistor typically connected to the  $V_{OUT}$  pin. The PG pin should not be pulled up to a voltage source greater than  $V_{IN}$ . PG goes low when the output voltage drops below 84% of the nominal output voltage or if the part is disabled. The PG comparator functions during current limit and thermal shutdown. For applications not using this feature, connect this pin to ground.

### Soft-Start Operation

The soft-start circuit controls the rate at which the output voltage rises up to regulation at power-up or LDO enable. This start-up ramp time can be set by adding an external capacitor from the SS pin to ground. An internal 2 $\mu A$  current source charges up this  $C_{SS}$  and the feedback reference voltage is clamped to the voltage across it. The start-up time is set by [Equation 1](#).

$$T_{start} = \frac{C_{SS} \times 0.5}{2\mu A} \quad (\text{EQ. 1})$$

[Equation 2](#) determines the  $C_{SS}$  required for a specific start-up in-rush current, where  $V_{OUT}$  is the output voltage,  $C_{OUT}$  is the total capacitance on the output and  $I_{INRUSH}$  is the desired in-rush current.

$$C_{SS} = \frac{V_{OUT} \times C_{OUT} \times 2\mu A}{I_{INRUSH} \times 0.5V} \quad (\text{EQ. 2})$$

The external capacitor is always discharged to ground at the beginning of start-up or enabling.

### Output Voltage Selection

An external resistor divider,  $R_1$  and  $R_2$  as referenced in [Figure 1 on page 1](#), is used to scale the output voltage relative to the internal reference voltage. The output voltage can be programmed to any level between 0.8V and 5V. The recommended value for  $R_2$  is 500 $\Omega$  to 5k $\Omega$ .  $R_1$  is then chosen to satisfy [Equation 3](#).

$$V_{OUT} = 0.5V \times \left( \frac{R_2}{R_1} + 1 \right) \quad (\text{EQ. 3})$$

### External Capacitor Requirements

External capacitors are required for proper operation. Careful attention must be paid to the layout guidelines and selection of capacitor type and value to ensure optimal performance.

#### OUTPUT CAPACITOR

The ISL80101-ADJ applies state-of-the-art internal compensation to keep the selection of the output capacitor simple for the customer. Stable operation over full temperature,  $V_{IN}$  range,  $V_{OUT}$  range and load extremes are guaranteed for all capacitor types and values assuming the minimum recommended ceramic capacitor is used for local bypass on  $V_{OUT}$ . There is a growing trend to use very-low ESR multilayer ceramic capacitors (MLCC) because they can support fast load transients and also bypass very high frequency noise from other sources. However, the effective capacitance of MLCCs drops with applied voltage, age,

and temperature. X7R and X5R dielectric ceramic capacitors are strongly recommended as they typically maintain a capacitance range within  $\pm 20\%$  of nominal voltage over full operating ratings of temperature and voltage. This output capacitor must be connected to the  $V_{OUT}$  and GND pins of the LDO with PCB traces no longer than 0.5cm.

Additional capacitors of any value in ceramic, POSCAP, alum/tantalum electrolytic types may be placed in parallel to improve PSRR at higher frequencies and/or load transient AC output voltage tolerances. The use of  $C_{PB}$  (see following section) is recommended when only the minimum recommended ceramic capacitor is used on the output. Please refer to [Table 2](#) for these minimum conditions for various output voltages.

## Phase Boost Capacitor

A small phase boost capacitor,  $C_{PB}$ , can be placed across the top resistor,  $R_2$ , in the feedback resistor divider network in order to place a zero at:

$$F_z = \frac{1}{2\pi R_2 C_{PB}} \quad (\text{EQ. 4})$$

This zero increases the crossover frequency of the LDO and provides additional phase resulting in faster load transient response.

It is important to note that LDO stability and load transient performance are affected by the type of output capacitor used. For optimal result, empirical tuning of  $C_{PB}$  is suggested for each specific application. It is recommended to not use  $C_{PB}$  when high ESR capacitors such as Aluminum Electrolytic or Tantalum are used on the output.

[Table 2](#) shows the recommended minimum ceramic  $C_{OUT}$  and corresponding  $C_{PB}$ ,  $R_2$  and  $R_1$  for different output voltages.

TABLE 2. RECOMMENDED  $C_{PB}$  FOR DIFFERENT  $V_{OUT}$  AND  $C_{OUT}$

$V_{OUT}$ (V)	$R_2$ (k $\Omega$ )	$R_1$ (k $\Omega$ )	$C_{OUT}$ ( $\mu$ F)	$C_{PB}$ (pF)
5.0	2.61	0.287	10	100
3.3	2.61	0.464	10	100
2.5	2.61	0.649	10	82
1.8	2.61	1.0	10	82
1.5	2.61	1.3	10	68
1.5	2.61	1.3	22	150
1.2	2.61	1.87	22	120
1.2	2.61	1.87	47	270
1.0	2.61	2.61	47	220
0.8	2.61	4.32	47	220

## INPUT CAPACITOR

For proper operation, a minimum capacitance of 10 $\mu$ F X5R/X7R is required at the input. This ceramic input capacitor must be connected to the  $V_{IN}$  and GND pins of the LDO with PCB traces no longer than 0.5cm.

## Power Dissipation and Thermals

The junction temperature must not exceed the range specified in the "Recommended Operating Conditions" on [page 4](#). The power dissipation can be calculated by using [Equation 5](#):

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_{GND} \quad (\text{EQ. 5})$$

The maximum allowable junction temperature,  $T_{J(MAX)}$  and the maximum expected ambient temperature,  $T_{A(MAX)}$  determine the maximum allowable power dissipation, as shown in [Equation 6](#):

$$P_{D(MAX)} = (T_{J(MAX)} - T_A) / \theta_{JA} \quad (\text{EQ. 6})$$

$\theta_{JA}$  is the junction-to-ambient thermal resistance.

For safe operation, ensure that the power dissipation  $P_D$ , calculated from [Equation 5](#), is less than the maximum allowable power dissipation  $P_{D(MAX)}$ .

The DFN package uses the copper area on the PCB as a heatsink. The EPAD of this package must be soldered to the copper plane (GND plane) for effective heat dissipation. [Figure 16](#) shows a curve for the  $\theta_{JA}$  of the DFN package for different copper area sizes.

FIGURE 16. 3mmx3mm 10-PIN DFN ON 4-LAYER PCB WITH THERMAL VIAS  $\theta_{JA}$  vs EPAD-MOUNT COPPER LAND AREA ON PCB

## Thermal Fault Protection

The power level and the thermal impedance of the package (+45° C/W for DFN) determine when the junction temperature exceeds the thermal shutdown temperature. In the event that the die temperature exceeds around +160° C, the output of the LDO will shut down until the die temperature cools down to about +130° C.

## Current Limit Protection

The ISL80101-ADJ LDO incorporates protection against overcurrent due to any short or overload condition applied to the output pin. The LDO performs as a constant current source when the output current exceeds the current limit threshold noted in the "Electrical Specifications" table on [page 4](#). If the short or overload condition is removed from  $V_{OUT}$ , then the output returns to normal voltage regulation mode. In the event of an overload condition, the LDO may begin to cycle on and off due to the die temperature exceeding thermal fault condition and subsequently cooling down after the power device is turned off.

Test Conditions changed from: <math>V_{OUT} + 0.5\text{V} &lt; V_{IN} &lt; 5\text{V}</math> to: <math>V_{OUT} + 0.4\text{V} &lt; V_{IN} &lt; 6\text{V}</math>, <math>V_{OUT} = 2.5\text{V}</math></p> <p>"DC Output Load Regulation" on page 4 - changed symbol from <math>\Delta V_{OUT}/\Delta I_{OUT}</math> to <math>V_{OUT}</math> no load-<math>V_{OUT}</math> high load)/<math>V_{OUT}</math> no load and added MAX 1. Test Conditions changed from: <math>0\text{A} &lt; I_{LOAD} &lt; 1\text{A}</math>, All voltage options to: <math>0\text{A} &lt; I_{LOAD} &lt; 1\text{A}</math>, <math>V_{OUT} = 2.5\text{V}</math></p> <p>Ground Pin Current Test Conditions changed from:</p> <p><math>I_{LOAD} = 0\text{A}</math>, <math>2.2\text{V} &lt; V_{IN} &lt; 6\text{V}</math> to: <math>I_{LOAD} = 0\text{A}</math>, <math>V_{OUT} + 0.4\text{V} &lt; V_{IN} &lt; 6\text{V}</math>, <math>V_{OUT} = 2.5\text{V}</math></p> <p><math>I_{LOAD} = 1\text{A}</math>, <math>2.2\text{V} &lt; V_{IN} &lt; 6\text{V}</math> to: <math>I_{LOAD} = 1\text{A}</math>, <math>V_{OUT} + 0.4\text{V} &lt; V_{IN} &lt; 6\text{V}</math>, <math>V_{OUT} = 2.5\text{V}</math></p> <p>Output Short Circuit Current Test Conditions changed from: <math>V_{OUT} = 0\text{V}</math>, <math>2.2\text{V} &lt; V_{IN} &lt; 6\text{V}</math> to: <math>V_{OUT} = 0\text{V}</math></p> <p>Thermal Shutdown Temperature, Thermal Shutdown Hysteresis, Turn-on Threshold and Hysteresis - Removed Test Conditions</p> <p>Removed "Rising Threshold" from "Thermal Shutdown Hysteresis" on page 4 and from "Hysteresis" on page 5</p> <p>"AC CHARACTERISTICS" on page 4 in PSRR - changed TYP from "72" to "65" for <math>f = 120\text{Hz}</math>. Added to Test Conditions: <math>V_{OUT} = 1.8\text{V}</math></p> <p>Output Noise Voltage in test conditions changed "10Hz" to "100Hz", added <math>V_{IN} = 2.2\text{V}</math>, <math>V_{OUT} = 1.8\text{V}</math>. Changed TYP from "63" to "53"</p> <p>"PG Flag Low Voltage" on page 5 changed in test conditions - <math>V_{IN} = 2.5\text{V}</math> TO <math>V_{IN} = 3\text{V}</math></p> <p>"Turn-on Threshold" on page 5 changed MIN from: 0.3; to: 0.5</p> <p>"Hysteresis" on page 5 changed in test conditions from: <math>2.2\text{V} &lt; V_{OUT} + 0.4\text{V} &lt; 6\text{V}</math>, to: <math>2.2\text{V} &lt; V_{IN} &lt; 6\text{V}</math></p> <p>"ENABLE Pin Leakage Current" on page 5 changed "Enable = 3V" to "Enable = 2.8V"</p> <p>Updated Output Spectral Noise Density (Figure 15 on page 8) and changed <math>I_L = 1\text{A}</math> to <math>I_{OUT} = 1\text{A}</math></p> <p>Updated POD L10.3x3 to most recent revision with changes as follows:</p> <p>Added missing dimension 0.415 in Typical Recommended land pattern.</p> <p>Shortened the e-pad rectangle on both the recommended land pattern and the package bottom view to line up with the centers of the corner pins.</p> <p>Tiebar Note 4 updated</p> <p>From: Tiebar shown (if present) is a non-functional feature.</p> <p>To: Tiebar shown (if present) is a non-functional feature and may be located on any of the 4 sides (or ends).</p>
Jul 31, 2014	2.00	<p>Updated the "Block Diagram" on page 2 reversed the + and - terminals on the EA amp. The inverting terminal is now connected to the Adj/Sense pin.</p> <p>Updated About Intersil verbiage to new standard.</p> <p>Updated "Package Outline Drawing" on page 12 to latest revision.</p>

DATE	REVISION	CHANGE
Aug 3, 2011	1.00	<p><b>PAGE 1</b></p> <p>1. Introduction, paragraph 1: Last two sentences removed, and replaced with: "The ISL80101-ADJ features an adjustable output. For the fixed output version of the ISL80101, please refer to the ISL80101 datasheet."</p> <p>2. Table 1: Replaced Table 1 with Table 1 from FN6931 to include the "ADJ or Fixed VOUT" column and "ISL80101-ADJ" row.</p> <p>3. Features: "Available in a 10 Ld DFN Package" has "T0220-5, T0263-5 and SOT223-5 to follow soon" removed.</p> <p><b>PAGE 5</b></p> <p>1. Enable Pin Characteristics</p> <p>a. "Enable Pin Turn-on Delay" changed to "ENABLE Pin Turn-on Delay"</p> <p>b. "Enable Pin Leakage Current" changed to "ENABLE Pin Leakage Current"</p> <p><b>PAGE 7</b></p> <p>Figure 9: Timescale changed from "20µs/DIV" to "TIME (20µs/DIV)"</p> <p><b>PAGE 8</b></p> <p>2. Equation 1 - Parentheses deleted.</p> <p>3. Equation 2 - Parentheses deleted.</p>
Mar 31, 2011	FN7834.0	Initial Release.

# Package Outline Drawing

For the most recent package outline drawing, see [L10.3x3](#).

L10.3x3  
 10 Lead Dual Flat Package (DFN)  
 Rev 11, 3/15

**NOTES:**

1. Dimensions are in millimeters.  
Dimensions in ( ) for Reference Only.
2. Dimensioning and tolerancing conform to ASME Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal ± 0.05
4. Tiebar shown (if present) is a non-functional feature and may be located on any of the 4 sides (or ends).
5. The configuration of the pin #1 identifier is optional, but must be located within the zone indicated. The pin #1 identifier may be either a mold or mark feature.

## IMPORTANT NOTICE AND DISCLAIMER

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES (“RENESAS”) PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for developers skilled in the art designing with Renesas products. You are solely responsible for (1) selecting the appropriate products for your application, (2) designing, validating, and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. Renesas grants you permission to use these resources only for development of an application that uses Renesas products. Other reproduction or use of these resources is strictly prohibited. No license is granted to any other Renesas intellectual property or to any third party intellectual property. Renesas disclaims responsibility for, and you will fully indemnify Renesas and its representatives against, any claims, damages, costs, losses, or liabilities arising out of your use of these resources. Renesas' products are provided only subject to Renesas' Terms and Conditions of Sale or other applicable terms agreed to in writing. No use of any Renesas resources expands or otherwise alters any applicable warranties or warranty disclaimers for these products.
