

## A Theoretical View of Coherent Sampling

### Introduction

In recent years, the comprehensive science behind testing the performance of A/D converters has been perfected. Commercially available equipment used to test the performance of A/D converters has been forced to keep up with the various performance measures developed. Some of these parameters include effective number of bits (ENOB), total harmonic distortion (THD), and signal to noise ratio (SNR). A number of data acquisition systems (DAS) have been developed to test the performance of these A/D converters.

One approach for measuring the parameters listed above is to use frequency-based continuous wave tests on A/D converters. Since these tests perform fast Fourier (FFT) transforms [1] of the sample signal, one issue arises. The continuous (sinusoidal) wave must be sampled coherently by the DAS system in order to avoid FFT artifacts. This application note was written to assist those trying to understand coherent sampling mathematically. For a more general discussion on coherent sampling, refer to [2].

### Definition of Coherent Sampling

In order to avoid FFT artifacts, the ratio between the frequency of the input signal and the sampling frequency of the system must be able to be expressed as a rational number. Let us take the ideal sinusoid formed from N samples:

$$x(n) = \sin(2\pi f n) \quad (\text{EQ. 1})$$

where n is defined as the sampling index  $0 \leq n \leq N - 1$ .

f is equal to the digital frequency. The analog frequency, F, is defined as  $F = F_S f$ , where  $F_S$  is the sampling frequency of the system. The digital frequency is considered coherent if f is a rational number; since there are only N samples in the sinusoidal data set, f is the rational number

$$f = \frac{k_0}{N} = \frac{F}{F_S}, \quad (\text{EQ. 2})$$

where  $k_0$  and N are integers.

$$x(n) = \sin\left(\frac{2\pi}{N} k_0 n\right) \quad (\text{EQ. 3})$$

where n is defined as the sampling index  $0 \leq n \leq N - 1$ .

Mathematically, there is no reason why f is required to be rational; N remains an integer, but  $k_0$  can range from all real numbers. In the following section, we will derive the discrete Fourier transform (DFT) of Equation 3 without requiring Equation 2 to be rational.

### Mathematical Reason Behind Coherent Sampling

The DFT is defined as

$$X(k) = \sum_{n=0}^{N-1} x(n) e^{-j2\pi k \frac{n}{N}} \quad (\text{EQ. 4})$$

where  $0 \leq k \leq N-1$  and k is the frequency sampling index. It is related to the analog frequency by

$$F = \frac{k}{N} F_S \quad (\text{EQ. 5})$$

To clear up a point of confusion, the FFT is an efficient method of computing DFT if N, the number of samples, is a power of 2. The DFT and FFT are only a tools used to identify the spectral purity of a periodic tone. Sinusoids certainly have the simplest spectral results (with which we will derive later); but other periodic signals, such as triangle waves and square waves, also have distinct spectral response. These transforms were invented by mathematicians at the turn of the century as a simple extension of the unit circle/sine-cosine relationship. As engineers, we apply the DFT and FFTs to a wide variety of signals and have been trained to identify a signal, perform signal-to-noise ratios, and evaluate the quality of whole systems.

Notice that F is now a discretely sampled domain related to the sampling frequency. k, also known as the frequency bin can only go up to N-1, and thus the maximum frequency is  $(N-1)F_S/N$ .

Recall that one of the Euler's identities is

$$\sin(x) = \frac{e^{jx} - e^{-jx}}{2j} \quad (\text{EQ. 6})$$

Using Equations 3, 4, and 6, the following can be derived:

$$X(k) = \frac{1}{2j} \sum_{n=0}^{N-1} \left( e^{j\frac{2\pi}{N} k_0 n} - e^{-j\frac{2\pi}{N} k_0 n} \right) e^{-j2\pi k \frac{n}{N}} \quad (\text{EQ. 7})$$

$$X(k) = \frac{1}{2j} \sum_{n=0}^{N-1} \left( e^{j\frac{2\pi}{N} (k_0 - k) n} - e^{-j\frac{2\pi}{N} (k_0 + k) n} \right). \quad (\text{EQ. 8})$$

The summation can be easily evaluated using the geometric series equation

$$\sum_{n=0}^{N-1} a^n = \frac{1-a^N}{1-a} \text{ for } |a| < 1 \quad (\text{EQ. 9})$$

Thus Equation 8 becomes

$$X(k) = \frac{1}{2j} \left( \frac{1 - e^{j\frac{2\pi}{N}(k_0 - k)N}}{1 - e^{j\frac{2\pi}{N}(k_0 - k)}} - \frac{1 - e^{-j\frac{2\pi}{N}(k_0 + k)N}}{1 - e^{-j\frac{2\pi}{N}(k_0 + k)}} \right) \quad (\text{EQ. 10})$$

Take advantage of the fact that

$$e^{2N} = e^N e^N \quad (\text{EQ. 11})$$

Equation 10 can be written as

$$X(k) = \frac{1}{2j} \left( \left[ \frac{e^{-j\pi(k_0 - k)} - e^{j\pi(k_0 - k)}}{e^{-j\frac{\pi}{N}(k_0 - k)} - e^{j\frac{\pi}{N}(k_0 - k)}} \right] \frac{e^{j\pi(k_0 - k)}}{e^{j\frac{\pi}{N}(k_0 - k)}} - \left[ \frac{e^{j\pi(k_0 + k)} - e^{-j\pi(k_0 + k)}}{e^{j\frac{\pi}{N}(k_0 + k)} - e^{-j\frac{\pi}{N}(k_0 + k)}} \right] \frac{e^{-j\pi(k_0 + k)}}{e^{-j\frac{\pi}{N}(k_0 + k)}} \right) \quad (\text{EQ. 12})$$

The resulting bracket terms can be reformed into sine wave using the synthesis of Equation 6. Thus Equation 12 can be written as

$$X(k) = \frac{1}{2j} \left( \left[ \frac{\sin[\pi(k_0 - k)]}{\sin[\frac{\pi}{N}(k_0 - k)]} \right] e^{j\pi[\frac{N-1}{N}](k_0 - k)} - \left[ \frac{\sin[\pi(k_0 + k)]}{\sin[\frac{\pi}{N}(k_0 + k)]} \right] e^{-j\pi[\frac{N-1}{N}](k_0 + k)} \right) \quad (\text{EQ. 13})$$

for  $k = 0, 1, \dots, N-1$ .

Now the importance of the digital frequency,  $f$ , being rational becomes clear. If  $f$  is rational, then  $k_0$  is an integer, and the numerators of both  $\sin(x)/\sin(x/N)$  functions are 0 for all frequency index  $k$ . Remember that the frequency index,  $k$ , is also related to a discrete analog frequency bin as shown in Equation 5. Now note that the denominator of the first  $\sin(x)/\sin(x/N)$  function goes to  $\sin(0) = 0$  only when  $k = k_0$ . Thus the signal is indeterminate when  $k = k_0$ . The first  $\sin(x)/\sin(x/N)$  function at this indeterminate point is equal to  $N$  using L'Hospital rule. A similar indeterminate function occurs for the second  $\sin(x)/\sin(x/N)$  function when  $k = N - k_0$ . The denominator is equal to  $\sin(\pi) = 0$ . Thus, if  $k_0$  is an integer, then Equation 13 is

$$X(k) = \frac{N}{2j} (\delta(k - k_0) + \delta(k - N + k_0)) \quad \text{for } k = 0, 1, \dots, N-1, \quad (\text{EQ. 14})$$

where  $\delta(x)$  is a delta function defined by  $\delta(x) = 0$  for all  $x$  except for  $x = 0$ ;  $\delta(0) = 1$ . Figure 1 shows a plot of Equation 13; the second delta function is not identical to Equation 14 due to the sinusoidal roll-over limitations of the software. The pseudo-code used to generate this plot is given in the Appendix.

FIGURE 1. PLOT OF THE FREQUENCY RESPONSE OF A SINUSOID WHERE  $k_0 = 16$ ,  $N = 256$

We define coherent frequencies as when the digital frequency of the sinusoid is rational and the FFT results in perfect delta functions occurring at the frequency bin  $k_0$  and  $N - k_0$ . Note that for logarithm magnitude display of Equation 13, engineers often normalize the FFT and DFT results by  $1/N$ . The number of samples,  $N$ , is seen as a computational gain. Note that the  $2j$  term in the gain is a phase component. The magnitude plots of Equation 13 show that the energy of the sinusoid is divided between the two delta functions.

Now let us examine sinusoids where  $k_0$  is not equal to an integer, and the function is not coherent with respect to  $N$  and  $F_S$ . The numerator of both  $\sin(x)/\sin(x/N)$  functions in Equation 13 can never go to 0 because  $k - k_0$  can never equal 0 and  $k - N + k_0$  can never equal  $N$ . In fact, the linear domain has, for large  $N$ , a sinc function shifted about  $k_0$  and  $N - k_0$  frequency bins. The dB plots of Equation 13 with a non-integer  $k_0$  reveal spreading about these same frequency bins. Figure 2 shows a 256 point sinusoid with a  $k_0 = 15.25$ . The pseudo-code used to generate this plot is given in the Appendix.

FIGURE 2. PLOT OF THE FREQUENCY RESPONSE OF A SINUSOID WHERE  $k_0 = 15.25$ ,  $N = 256$

## Summary

For a data set of  $N$ , it was shown that the ratio of  $F/F_S$  must have an equivalent ratio  $k_0/N$  that is a rational number. If this condition is not met, smearing across the frequency bins occurs. The DAS system is left with three options. First, it can compensate for the frequency artifact caused by non-coherent sampling using windowing. The compensation of non-coherent sampling can only be marginal, however, if the DAS system is limited in registers and computational capability. The second option is for the DAS system to fix the sampling frequency of the system, compute a frequency of the continuous wave that results in an equivalent ratio  $F/F_S = k_0/N$  that is rational, and tune the input continuous wave to the computed frequency. The third option is for the DAS system to fix the continuous wave frequency, compute a sampling frequency of the system that results in an equivalent ratio  $F/F_S = k_0/N$  that is rational, and tune the sampling frequency to the computed frequency. The latter two options are practical approaches for most DAS systems.

## Appendix

Pseudo-code used to generate Figure 1 from Equation 13

```
k = 0:255;
k0 = 16;
A1 = sin(pi*(k0-k)); A2 = sin(pi*(k0+k));
B1 = sin(pi*(k0-k)/256); B2 = sin(pi*(k0+k)/256);
C1 = exp(j*pi*255/256*(k0-k));
C2 = exp(-j*pi*255/256*(k0+k));
for o = 1:256
    if B1(o) ~= 0
        X1(o) = 1/(2*j)*(A1(o)/B1(o)*C1(o) -
            A2(o)/B2(o)*C2(o));
    else
        X1(o) = 256;
    end
end
plot(20*log10(abs(X1/256)), 'w')
axis([1 256 -60 0])
xlabel('frequency index = k')
ylabel('Magnitude (dB)')
```

Pseudo-code used to generate Figure 2 from Equation 13

```
k=0:255;
k0 = 15.25;
A1 = sin(pi*(k0-k)); A2 = sin(pi*(k0+k));
B1 = sin(pi*(k0-k)/256); B2 = sin(pi*(k0+k)/256);
C1 = exp(j*pi*255/256*(k0-k));
C2 = exp(-j*pi*255/256*(k0+k));
X1 = 1/(2*j)*(A1./B1.*C1 - A2./B2.*C2);
plot(k, 20*log10(abs(X1/256)), 'w')
axis([0 255 -60 0])
xlabel('frequency index = k')
ylabel('Magnitude (dB)')
```

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.  
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.  
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.  
Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.  
(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.  
(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
