1. Abstract

The D/A converter is a device that converts a digital code to an analog voltage when a value is written to the DAi register, and the D/A conversion result is output \((i = 0, 1)\). Analog voltage to be output \((V)\) is calculated based on the value \((n)\) set in the DAi register \((n = 0\) to 255).

\[
\text{Analog voltage to be output (V) = } \frac{\text{reference voltage (VREF) \times (setting value in the DAi register)}}{256}
\]

2. Introduction

The application example described in this document applies to the following microcomputers (MCUs):

MCUs: R32C/116 Group, R32C/117 Group, and R32C/118 Group

This application note can be used with other R32C/100 Series MCUs which have the same special function registers (SFRs) as the above groups. Check the manuals for any modifications to functions. Careful evaluation is recommended before using the program described in this application note.
3. Application Example

This application example describes how to output analog voltage from the DA0 pin (P9_3). This document explains how to rewrite the DA0 register using timer A0 to generate an interrupt with a 1 ms interval. The initial output value is 0.0 V. The output value rises approximately 1.0 V every 1 ms (e.g. 1.0 V → 2.0 V). After reaching an output value of approximately 5.0 V, the output value loops back to 0.0 V (e.g. 0.0 V → 1.0 V → 2.0 V → 3.0 V → 4.0 V → 5.0 V → 0.0 V).

The other condition is that the reference voltage (VREF) is 5.0 V.

3.1 Description of Application Example

The following numbers in parenthesis correspond to the number in parenthesis in the figure below.

1. In the DA0 register, set the value that outputs 0.0 V.
2. When the DA0E bit in the DACON register is set to 1, the conversion result is output from the DA0 pin.
3. Timer A0 starts counting.
4. When timer A0 underflows, an interrupt request is generated. Change the output value of the DA0 register in the interrupt handler for that interrupt.

Additional description:
- To disable the D/A conversion result output, the DA0E bit should be set to 0. At that time, the DA0 pin becomes high-impedance.
- To use the DA0 pin, the P9_3S register should be set to 80h and the PD9_3 bit in the PD9 register should be set to input.
- To use the DA1 pin, the P9_4S register should be set to 80h and the PD9_4 bit in the PD9 register should be set to input.

3.2 Timing

Figure 3.1 shows D/A Converter Operation.

![Figure 3.1 D/A Converter Operation](image)
3.3 Flowcharts

Figure 3.2 and Figure 3.3 show the Main Function and Timer A0 Interrupt Function, respectively.

```
main

(1) Disable maskable interrupts

(Note 1) SetPLLClock() Initialize clock.

(2) Set registers associated with timer A0

(3) PRCR ← 04h

(4) P9_3S ← 80h

(5) PRCR ← 04h

(6) PD9_3 ← 0

(7) Set output value to the DA0 register (0.0 V)

(8) DACON ← 01h

(9) Enable maskable interrupts

(10) Start timer A0 count

Notes:
1. Refer to the hardware user's manual for initializing the clock.
2. In registers PD9 and P9_3S, the write operation should be performed immediately after the instruction to set the PRC2 bit in the PRCR register to 1. No interrupt or DMA transfers should be accepted between this instruction and the next one.
3. To use as the D/A converter pin, the PD9_3 bit should be set to 0 (port PD9_3 functions as input port).
```

Figure 3.2 Main Function
Figure 3.3 Timer A0 Interrupt Function

Output value for D/A conversion was approximately 5.0 V?

Yes

- Initialize output value for next D/A conversion (0.0 V)

No

- Set output value for next D/A conversion

- Set output value to the DA0 register

- REIT

General Precautions in the Handling of MPU/MCU Products

The following usage notes are applicable to all MPU/MCU products from Renesas. For detailed usage notes on the products covered by this manual, refer to the relevant sections of the manual. If the descriptions under General Precautions in the Handling of MPU/MCU Products and in the body of the manual differ from each other, the description in the body of the manual takes precedence.

1. Handling of Unused Pins
   Handle unused pins in accord with the directions given under Handling of Unused Pins in the manual.
   - The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.

2. Processing at Power-on
   The state of the product is undefined at the moment when power is supplied.
   - The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

3. Prohibition of Access to Reserved Addresses
   Access to reserved addresses is prohibited.
   - The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.

4. Clock Signals
   After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.
   - When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

5. Differences between Products
   Before changing from one product to another, i.e. to one with a different part number, confirm that the change will not lead to problems.
   - The characteristics of MPU/MCU in the same group but having different part numbers may differ because of the differences in internal memory capacity and layout pattern. When changing to products of different part numbers, implement a system-evaluation test for each of the products.
Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.

2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.

3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.

4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application example. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.

5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacturers, uses, or sale is prohibited under any applicable domestic or foreign laws or regulations.

6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors or omissions from the information included herein.

7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics.

8. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

9. "Standard" - Computer; office equipment; communication equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal equipment; industrial robots.

10. "High Quality" - Transportation equipment (automobiles, trains, ships, etc.); anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.

11. "Specific" - Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems); surgical implantations; or healthcare intervention (e.g. respiration, etc.); and any other applications or purposes that pose a direct threat or human life.

12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

13. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristic. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.

14. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.

15. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.

16. The documents described in this document are not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics.

17. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.

18. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Not 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Not 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
