

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

M16C/62P, M32C/87 Group

Differences between M16C/62P and M32C/87

1. Abstract

The following document describes differences between M16C/62P 128-pin version and M32C/87 144-pin version. Refer to each device's hardware manual or software manual for details.

2. Introduction

The explanation of this issue is applied to the following condition:

Applicable MCU: M16C/62P 128-pin version, M32C/87 144-pin version

3. Differences Outline

3.1 Differences Outline of Functions

Table 3.1.1 lists the differences of functions.

Table 3.1.1 Differences of Functions ⁽¹⁾

Item	M16C/62P	M32C/87
Basic Instructions	91 instructions	108 instructions
Minimum Instruction Execution Time	41.7ns(f(BCLK)=24MHz, VCC1=3.0V to 5.5V) 100ns(f(BCLK)=10MHz, VCC1=2.7V to 5.5V)	31.3ns(f(BCLK)=32MHz, VCC1=4.2V to 5.5V) 41.7ns(f(BCLK)=24MHz, VCC1=3.0V to 5.5V)
Address Space	1 Mbytes (Available to 4 Mbytes by memory space expansion function)	16 Mbytes
I/O Port	I/O Port: 113, Input Port: 1	I/O Port: 123, Input Port: 1
Real-Time Port	None	4 bits x 4 channels
Intelligent I/O	None	Time measurement function: 16 bits x 8 channels Waveform generating function: 16 bits x 16 channels Communication function (Clock synchronous serial I/O, Clock asynchronous serial I/O, HDLC data processing, IEBus, Clock synchronous variable length serial I/O)
Serial Interface	3 channels Clock synchronous serial I/O Clock asynchronous serial I/O I ² C bus ⁽²⁾ , IEBus ⁽³⁾ 2 channels Clock synchronous serial I/O	5 channels Clock synchronous serial I/O Clock asynchronous serial I/O I ² C bus, IEBus, IrDA (1 channel) 2 channels Clock synchronous serial I/O Clock asynchronous serial I/O
CAN Module	None	2 channels (M32C/87A: 1 channel, M32C/87B: Not available)
A/D Converter	10-bit A/D converter: 1 circuit, 26 channels	10-bit A/D converter: 1 circuit, 34 channels
DMAC	2 channels	4 channels
DMAC II	None	Included
X/Y Converter	None	16 bits x 16 bits
Interrupt	29 internal and 8 external sources, 4 software sources	41 internal and 11 external sources, 5 software sources
Oscillation Stop Detect Function	Stop detection of main clock oscillation, re-oscillation detection function	Stop detection of main clock oscillation
Supply Voltage	VCC1=3.0V to 5.5V, VCC2=2.7V to VCC1 (f(BCLK)=24MHz) VCC1=2.7V to 5.5V, VCC2=2.7V to VCC1 (f(BCLK)=10MHz)	VCC1=4.2V to 5.5V, VCC2=3.0V to VCC1 (f(BCLK)=32MHz) VCC1=3.0V to 5.5V, VCC2=3.0V to VCC1 (f(BCLK)=24MHz)
Power Consumption	14mA(VCC1=VCC2=5V, f(BCLK)=24MHz) 8mA(VCC1=VCC2=3V, f(BCLK)=10MHz) 2.0μA(VCC1=VCC2=5V, f(XCIN)=32kHz, wait mode) 0.8μA(VCC1=VCC2=5V, stop mode)	32mA(VCC1=VCC2=5V, f(BCLK)=32MHz) 25mA(VCC1=VCC2=3.3V, f(BCLK)=24MHz) 10μA(VCC1=VCC2=5V, f(BCLK)=32kHz, wait mode) 0.8μA(VCC1=VCC2=5V, stop mode)
Program and Erase Endurance	100 times (all area) or 1,000 times (user ROM area without block A and block 1)/ 10,000 times (block A, block 1)	100 times (all area)

NOTES:

1. Refer to hardware manual for Electrical Characteristics and details.
2. I²C bus is a trademark of Koninklijke Philips Electronics N. V.
3. IEBus is a trademark of NEC Electronics Corporation.

3.2 Differences of Pin Characteristics

Table 3.2.1 and Table 3.2.2 list the differences of pin characteristics.

Table 3.2.1 Differences of Pin Characteristics (1/2)

M16C/62P	M32C/87	Differences from M16C/62P
P9_7/SIN4/ADTRG	P9_7/RXD4/SCL4/STXD4/ADTRG	Add RXD4/SCL4/STXD4 Delete SIN4
P9_6/SOUT4/ANEX1	P9_6/TXD4/SDA4/SRXD4/CAN1OUT/ANEX1	Add TXD4/SDA4/SRXD4/CAN1OUT Delete SOUT4
P9_5/CLK4/ANEX0	P9_5/CLK4/CAN1IN/CAN1WU/ANEX0	Add CAN1IN/CAN1WU
P9_4/TB4IN/DA1	P9_4/TB4IN/CTS4/RTS4/SS4/DA1	Add CTS4/RTS4/SS4
P9_3/TB3IN/DA0	P9_3/TB3IN/CTS3/RTS3/SS3/DA0	Add CTS3/RTS3/SS3

4. Detailed Differences

4.1 Differences of CPU Functions

Table 4.1.1 lists the differences of Instructions, Table 4.1.2 lists the differences of CPU registers, and Table 4.1.3 lists the differences of register banks.

Table 4.1.1 Differences of Instructions

Item	M16C/62P	M32C/87
Additional Instructions	-	ADDX, BITINDEX, BRK2, CLIP, EXTZ, FREIT, INDEXcnd, MAX, MIN, MOVX, MULEX, SCcnd, SCMPU, SHANC, SIN, SMOVU, SOUT, SUBX
Deleted Instructions	-	LDE (use MOV instruction) STE (use MOV instruction) LDINTB (use LDC #IMM, INTB)
Bit Operation	Register bit 0 to 15 can be operated BSET, bit, R0 (bit 0 to 15)	Register bit 0 to 7 can be operated BSET, bit, R0L (bit 0 to 7) BSET, bit, R0H (bit 0 to 7)

Table 4.1.2 Differences of Bit Length

Internal register		M16C/62P	M32C/87
Address register	A0, A1	16 bit	24 bit
Static base register	SB		
Frame base register	FB		
User stack pointer	USP		
Interrupt stack pointer	ISP		
Interrupt table register	INTB	20 bit	24 bit
	INTBL	16 bit	-
	INTBH	4 bit	-
Program counter	PC	20 bit	24 bit
High-speed interrupt register	SVF	-	16 bit
	SVP	-	16 bit
	VCT	-	24 bit
DMAC associated register (When using three or more DMAC channels, Register bank 1 and high-speed interrupt register are extended for use as DMAC register)	DMD0, DMD1	-	8 bit
	DCT0, DCT1, DCT2(R0), DCT3(R1)	-	16 bit
	DRC0, DRC1, DRC2(R2), DRC3(R3)	-	16 bit
	DMA0, DMA1, DMA2(A0), DMA3(A1)	-	24 bit
	DRA0, DRA1, DRA2(SVP), DRA3(VCT)	-	24 bit
	DSA0, DSA1, DSA2(SB), DSA3(FB)	-	24 bit

Table 4.1.3 Differences of Register Banks

Internal register		M16C/62P	M32C/87
Static base register	SB	Register bank 0	Register bank 0 Register bank 1

4.2 Differences of Reset

There are 5 kinds of reset which are hardware reset 1, low voltage detection reset (hardware reset 2), software reset, watchdog timer reset and oscillation stop detection reset (only M16C/62P). Some of SFR maintain values set before reset, even after each reset has been performed. Table 4.2.1 lists details.

Table 4.2.1 Register Maintaining Values Even after Reset

Kind of reset	Register	State after reset	
		M16C/62P	M32C/87
Hardware reset 1	PUR1	Different with CNVSS level 00h(CNVSS pin "L") 02h(CNVSS pin "H")	Initialized regardless of the CNVSS level
	WDC	WDC5 bit is not initialized	
Low voltage detection reset (Hardware reset 2)	PUR1	Different with CNVSS level 00h(CNVSS pin "L") 02h(CNVSS pin "H")	Initialized regardless of the CNVSS level
	WDC	WDC5 bit is not initialized	
Software reset	PM0	PM01 and PM00 bit are not initialized	
	VCR1	Not initialized	Initialized
	VCR2	Not initialized	Initialized
	PUR1	Different with the value of PM01 and PM00 resistor 00h(PM01, PM00=00b) 02h(PM01, PM00=01b) 02h(PM01, PM00=11b)	Initialized regardless of the CNVSS level
	TCSPR	-	Not initialized
	WDC	WDC5 bit is not initialized	
Watchdog timer reset	PM0	PM01 and PM00 bit are not initialized	
	VCR1	Not initialized	Initialized
	VCR2	Not initialized	Initialized
	PUR1	Different with the value of PM01 and PM00 resistor 00h(PM01, PM00=00b) 02h(PM01, PM00=01b) 02h(PM01, PM00=11b)	Initialized regardless of the CNVSS level
	TCSPR	-	Not initialized
	WDC	WDC5 bit is not initialized	
Oscillation stop detection reset	PM0	PM01 and PM00 bit are not initialized	-
	CM2	CM20, CM21 and CM27 bit are not initialized	-
	VCR1	Not initialized	-
	VCR2	Not initialized	-
	PUR1	Different with the value of PM01 and PM00 resistor 00h(PM01, PM00=00b) 02h(PM01, PM00=01b) 02h(PM01, PM00=11b)	-
	WDC	WDC5 bit is not initialized	-

4.3 Differences of Low Voltage Detection Circuit

Table 4.3.1 lists the differences of low voltage detection circuit associated SFR.

Table 4.3.1 Differences of Low Voltage Detection Circuit associated SFR

Symbol	Address		bit	Differences	
	M16C/62P	M32C/87		M16C/62P	M32C/87
VCR1	0019h	001Bh	-	Address is changed	
VCR2	001Ah	0017h	-	Address is changed	
D4INT	001Fh	002Fh	1	STOP Mode Deactivation Control	STOP/WAIT Mode Deactivation Control
			6-7	Nothing is assigned.	Reserved bit

4.4 Differences of Processor Mode

Table 4.4.1 lists the differences of processor mode associated SFR.

Table 4.4.1 Differences of Processor Mode associated SFR.

Symbol	Address		bit	Differences	
	M16C/62P	M32C/87		M16C/62P	M32C/87
PM0	0004h	0004h	6	Port P4_0 to P4_3 Function Select	Reserved bit
			7	BCLK Output Disable	BCLK Output function select
PM1	0005h	0005h	0	CS2 Area Switch	External Memory Space Mode
			1	Port P3_7 to P3_4 Function Select	
			2	Watchdog Timer Function Select	Internal Memory Wait
			3	Internal Reserved Area Expansion	SFR Area Wait
			4-5	Memory Area Expansion	ALE Pin Select
			7	Wait Bit	Reserved bit

4.5 Differences of Bus

Table 4.5.1 lists the Differences of bus, Table 4.5.2 lists the Differences of bus setting, Table 4.5.3 lists the Differences of bus control pin, and Table 4.5.4 lists the Differences of bus associated SFR.

Table 4.5.1 Differences of Bus

Item	M16C/62P	M32C/87
Address space	1-Mbyte/ 4-Mbyte (refer to memory space expansion function)	16-Mbyte
Address bus width	12 bit/ 16bit/ 20bit	24 bit fixed
External Area wait	1 to3 waits	2 to 9 waits
Recovery Cycle Addition	None	Existing
SFR Area wait number	1 wait/ 2 waits (at PLL operation)	1 wait (Set to 2 waits to access the CAN associated SFR)

Table 4.5.2 Differences of Bus Setting

Item	M16C/62P	M32C/87
Address bus width	PM06 bit in the PM0 register PM11 bit in the PM1 register	-
Data bus width	Set bus width in all area BYTE pin "H" : 8 bit bus width "L" : 16 bit bus width	Set bus width per external space DS0 to DS3 bit in the DS register "0" : 8 bit bus width "1" : 16 bit bus width Set bus width after reset Only the external space 3 is set by BYTE pin. BYTE pin "H" : 8 bit bus width "L" : 16 bit bus width
Chip select signal	Csi bit (i=0 to 3) in the CSR register	PM10 and PM11 bit in the PM1 register
SFR Area wait number	PM20 bit in the PM2 register	PM13 bit in the PM1 register
External Area wait	CsiW bit in the CSR register CSEi0 and CSEi1 bit in the CSE register	EWCRi00 to EWCRi04 bit in the EWCRi register (i=0 to 3)
Recovery Cycle Addition	-	EWCRi06 bit in the EWCRi register
BCLK output	PM07 bit in the PM0 register	PM07 bit in the PM0 register CM00 and CM01 bit in the CM0 register

Table 4.5.3 Differences of Bus associated Pin

Pin name	M16C/62P	M32C/87
ALE	P5_6	P5_6
		P5_4/HLDA
		P5_3/CLKOUT/BCLK
CS0	P4_4	P4_7/A23
CS1	P4_5	P4_6/A22
CS2	P4_6	P4_5/A21
CS3	P4_7	P4_4/A20
Multiplexed bus associated	P3_7/A15	P3_7/A15(/D15)
	P3_6/A14	P3_6/A14(/D14)
	P3_5/A13	P3_5/A13(/D13)
	P3_4/A12	P3_4/A12(/D12)
	P3_3/A11	P3_3/A11(/D11)
	P3_2/A10	P3_2/A10(/D10)
	P3_1/A9	P3_1/A9(/D9)
	P3_0/A8(/-/D7)	P3_0/A8(/D8)
	P2_7/A7(/D7/D6)	P2_7/A7(/D7)
	P2_6/A6(/D6/D5)	P2_6/A6(/D6)
	P2_5/A5(/D5/D4)	P2_5/A5(/D5)
	P2_4/A4(/D4/D3)	P2_4/A4(/D4)
	P2_3/A3(/D3/D2)	P2_3/A3(/D3)
	P2_2/A2(/D2/D1)	P2_2/A2(/D2)
	P2_1/A1(/D1/D0)	P2_1/A1(/D1)
	P2_0/A0(/D0/-)	P2_0/A0(/D0)

Table 4.5.4 Differences of Bus associated SFR

Symbol	Address		bit	Differences	
	M16C/62P	M32C/87		M16C/62P	M32C/87
CSR	0008h	-	-	Only M16C/62P	-
CSE	001Bh	-	-	Only M16C/62P	-

EWCR3	-	004Bh	-	-	Only M32C/87

4.6 Differences of Clock

Table 4.6.1 lists the Differences of clock, Table 4.6.2 lists the Differences of clock associated setting, Table 4.6.3 lists the Differences of clock associated pin, and Table 4.6.4 lists the Differences of clock associated SFR.

Table 4.6.1 Differences of Clock

Item	M16C/62P	M32C/87
XIN-XOUT Drive Capacity	Changeable	Unchangeable
Main Clock Division	Select from no division, 2, 4, 8, 16 division	Select from no division, 2, 3, 4, 6, 8, 10, 12, 14, 16 division
Peripheral Function Clock	f1, <u>f2⁽¹⁾</u> , f8, f32, f1SIO, f2SIO, f8SIO, f32SIO fAD, fc32	f1, f8, <u>f32⁽²⁾</u> , <u>f2n⁽³⁾</u> fAD, fc32, fCAN
PLL Multiplying Factor	Multiply-by-2/ Multiply-by-4/ Multiply-by-6/ Multiply-by-8	Divide-by-2 or Divide-by-3 after Multiply-by-6, Multiply-by-8
Operations when Oscillation stop	Oscillation Stop Detection Reset/ Oscillation Stop, Re-oscillation Stop Interrupt	Oscillation Stop Detection Interrupt
Oscillation Stop Detect Function	Detect Oscillation Stop and Re-oscillation	Detect Oscillation Stop
Wait mode, Stop mode	Exiting sequence is different between M16C/62P and M32C/87.	
Transition from low-speed mode or low-power mode to stop mode	Enable	Disable
Transition from on-chip oscillator mode to stop mode		

NOTES:

1. f1 or f2 is selected as a count source of the timers A and B and as an operating clock of the serial I/O by setting PCLKR register.
2. Deleted as a count source of the timers, but possible to use as the CLKOUT
3. f2 is deleted, set by f2n (n=0 to 15, (n=0 : no division))

Table 4.6.2 Differences of Clock associated Setting

Item	M16C/62P	M32C/87
XIN-XOUT Drive Capacity	CM15 bit in the CM1 register	-
Main Clock Division	CM06 bit in the CM0 register CM16, CM17 bit in the CM1 register	MCD0 to MCD4 bit in MCD register
PLL Multiplying Factor	PLC0 register	PLC0 register PLC1 register
Operation Select (when an oscillation stop)	CM27 bit in the CM2 register	-

Table 4.6.3 Differences of Clock associated Pin

Pin name	M16C/62P	M32C/87
CLKOUT	P5_7	P5_3

Table 4.6.4 Differences of Clock associated SFR

Symbol	Address		bit	Differences

4.9 Differences of Watchdog Timer

Table 4.9.1 lists the differences of Watchdog Timer.

Table 4.9.1 Differences of Watchdog Timer

Item	M16C/62P	M32C/87
Watchdog Timer Function Select (select interrupt or reset)	PM12 bit in the PM1 register	CM06 bit in the CM0 register

4.10 Differences of DMAC

Table 4.10.1 lists the Differences of DMAC, Table 4.10.2 lists the differences of DMAC setting, and Table 4.10.3 lists the differences of DMAC associated SFR. DMAC associated registers are assigned to SFR in M16C/62P, and are assigned to internal register and SFR in M32C/87. So setting methods are different from each other.

Table 4.10.1 Differences of DMAC

Item	M16C/62P	M32C/87
DMAC-Associated register	Assigned to SFR	Assigned to internal register and SFR
Number of Channels	2 channels	4 channels
Transfer Memory Space	<ul style="list-style-type: none"> - From a desired address in a 1-Mbyte space to a fixed address - From a fixed address to a desired address in a 1-Mbyte space - From a fixed address to a fixed address 	<ul style="list-style-type: none"> - From a desired address in a 16-Mbyte space to a fixed address - From a fixed address to a desired address in a 16-Mbyte space
Transfer Count	Number set in DMAi transfer counter (i=0 to 1) +1	Number set in DMAi transfer counter (i=0 to 3)
Interrupt Request Generation Timing	When the DMAi transfer counter under-flowed	When the DMAi transfer counter changes "0001h" to "0000h"

Table 4.10.2 Differences of DMAC Setting

Item	M16C/62P	M32C/87
DMA Transfer Factor Select	Set DSEL0 to DSEL3 bit and DMS bit in the DMiSL register	Set DSEL0 to DSEL4 bit in the DMiSL register
Transfer Mode	DMiCON register	Set DMDi register
Source Address	SARi register	When the Source Address is fixed: DSAi register
Destination Address	DARi register	When the Source Address is in Memory: DMAi register (Re-loaded value in repeat transfer mode is set to DRAi register)
Transfer Count	Set the transfer count minus 1 to TCRI register.	Set the transfer count to DCTi register (Re-loaded value in repeat transfer mode is set to DRCi register)

Table 4.10.3 Differences of DMAC associated SFR

Symbol	Address		bit	Differences

			3	Reserved bit	Nothing is assigned.
			4	Frequency Select 2	Nothing is assigned.
			5	Nothing is assigned.	External Trigger Request Cause Select
			6-7	Nothing is assigned.	Reserved bit
AD0CON3	-	0395h	-	-	Only M32C/87
AD0CON4	-	0392h	-	-	Only M32C/87
AD00AD07/ AD0toAD7	03C0h-03C1h to 03CEh-03CFh	0380h-0381h to 038Eh-038Fh	-	Address is different	

4.14.2 Notice of A/D Converter

In M32C/87, to separate A/D input/output pins (ANEX0, ANEX1, AN4 to AN7, AN15_0 to AN15_7) and the other peripheral function inputs, set PSL3_5 and PSL3_6 bit in the PSL3 register, PSC_7 bit in the PSC register, IPS2 bit in the IPS register, and IPSB register. Setting "1" (A/D input/output) to corresponding bits with pins which are used as A/D input/output prevents applying intermediate electric potential from the other peripheral function inputs. (Applying intermediate electric potential may bring increase of power supply current.)

4.15 Differences of D/A Converter

4.15.1 Differences of D/A Converter

Table 4.15.1 lists the Differences of D/A converter, and Table 4.15.2 lists the Differences of D/A converter associated SFR.

Table 4.15.1 Differences of D/A Converter

Item	M16C/62P	M32C/87
D/A Conversion timing	When writing DAi register (i = 0, 1)	When a value is written to the DAi register (i = 0,1)/ When the timer, determined by the DATi0 or DATi1 bit setting in the DACON1 register, underflows

Table 4.15.2 Differences of D/A Converter associated SFR

Symbol	Address		bit	Differences	
	M16C/62P	M32C/87		M16C/62P	M32C/87
DACON	03DCh	039Ch	-	Address is different	
DACON1	-	039Dh	-	-	Only M32C/87
DA0	03D8h	0398h	-	Address is different	
DA1	03DAh	039Ah	-	Address is different	

4.15.2 Notice of D/A Converter

In M32C/87, to separate D/A output pins (DA0, DA1) and the other peripheral function inputs, set PSL3_3 and PSL3_4 bit in the PSL3 register. Setting "1" (D/A output) to corresponding bits with pins which are used as D/A output prevents applying intermediate electric potential from the other peripheral function inputs. (Applying intermediate electric potential may bring increase of power supply current.)

4.16 Differences of CRC Calculation

Table 4.16.1 lists the Differences of CRC calculation associated SFR.

Table 4.16.1 Differences of CRC Calculation associated SFR

Symbol	Address		bit	Differences

			6	Nothing is assigned.	P9_0 to P9_3 Pull-Up
			7	Nothing is assigned.	P9_4 to P9_7 Pull-Up
PUR3	03DFh	03DBh	0	P11_0 to P11_3 Pull-Up	P10_0 to P10_3 Pull-Up
			1	P11_4 to P11_7 Pull-Up	P10_4 to P10_7 Pull-Up
			2	P12_0 to P12_3 Pull-Up	P11_0 to P11_3 Pull-Up
			3	P12_4 to P12_7 Pull-Up	P11_4 Pull-Up
			4	P13_0 to P13_3 Pull-Up	P12_0 to P12_3 Pull-Up
			5	P13_4 to P13_7 Pull-Up	P12_4 to P12_7 Pull-Up
			6	P14_0, P14_1 Pull-Up	P13_0 to P13_3 Pull-Up
			7	P11 to P14 Enabling	P13_4 to P13_7 Pull-Up
PUR4	-	03DCh	-	-	Only M32C/87

4.17.4 Function Select Register

M32C/87 has the Function Select Registers (PSC, PSC2, PSC3, PSC6, PSD1, PSD2, PSE1, PSE2, PSL0 to PSL3, PSL6 and PSL9). When multiple peripheral function outputs are assigned to a pin, set these function select registers to select which function is used.

4.17.5 Input Function Select Register

M32C/87 has the input function select registers (IPS, IPSA and IPSB) that select input function.

4.18 Differences of Flash Memory

4.18.1 Differences of Flash Memory

Table 4.18.1 lists the differences of flash memory. Addresses of flash memory associated SFR are different in M16C/62P and M32C/87.

Table 4.18.1 Differences of Flash Memory

Symbol	Address		bit	Differences	
	M16C/62P	M32C/87		M16C/62P	M32C/87
FIDR	01B4h	-	-	Only M16C/62P	-
FMR0	01B7h	0057h	-	Address is different	
FMR1	01B5h	0055h	-	Address is different	

4.18.2 Differences of Software Command

Table 4.18.2 lists the differences of software command.

Table 4.18.2 Differences of Software Command

Software Command	M16C/62P	M32C/87
Erase All Unlocked Block	Only M16C/62P	-

4.19 Peripheral Functions added in M32C/87

Peripheral Functions added in M32C/87 are as below.

- Real-Time Port
- Intelligent I/O
- CAN
- DMACII
- X/Y Conversion

4.20 Differences of Development Tool

Table 4.20.1 lists the differences of development tool.

Table 4.20.1 Differences of Development Tool.

Tool	For M16C/62P	For M32C/87
C Compiler (including Simulator Debugger)	M3T-NC30WA	M3T-NC308WA
Real-time OS	M3T-MR30	M3T-MR308/4
Emulator Debugger	M16C R8C PC7501 M16C PC4701	M32C PC7501
Emulation Probe	M3062PT2-EPB (for PC7501)	M30870T-EPB
Emulation Pod	M3062PT3-RPD-E (for PC4701)	
Compact Emulator	M3062PT3-CPE	M30870T2-CPE
Renesas Starter Kits	R0K33062PS000BE	R0K330879S000BE

REVISION HISTORY

Rev.	Date	Description	
		Page	Summary
1.00	2006.06.20	-	First edition issued

Keep safety first in your circuit designs!

1. Renesas Technology Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corporation product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corporation or a third party.
2. Renesas Technology Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor for the latest product information before purchasing a product listed herein.
The information described here may contain technical inaccuracies or typographical errors. Renesas Technology Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.
Please also pay attention to information published by Renesas Technology Corporation by various means, including the Renesas Technology Corporation Semiconductor home page (<http://www.renesas.com>).
4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
5. Renesas Technology Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
6. The prior written approval of Renesas Technology Corporation is necessary to reprint or reproduce in whole or in part these materials.
7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
8. Please contact Renesas Technology Corporation for further details on these materials or the products contained therein.
