# RL78/F13, F14 Group

LIN Slave Mode (RLIN3)

## Introduction

This document describes how to use the RLIN3 hardware in slave mode.

## **Target Device**

## RL78/F13,F14 Group(R5F10PPJ)

When using this application note with other Renesas MCUs, careful evaluation is recommended after making modifications to comply with the alternate MCU.

## **Development environment**

IAR Embedded workbench for Renesas RL78 V1.30.3

General Precautions in the Handling of MPU/MCU Products

## 1. RLIN3 hardware module specifications

The RLIN3 interface is a dedicated UART interface supporting LIN slave and master functionality

n = 0, 1

Figue1.1 RLIN3 Module Block Diagram

#### Features of the RLIN3 interface

- LIN Slave mode support
  - Basic LIN functionality
    - Conform to LIN Specification Package Revision 1.3, 2.0, 2.1 and SAEJ2602
    - Automatic baud rate detection or fixed baud rate mode
    - Wakeup transmission and reception(LIN WakeUp mode)
    - Automatic classic or enhanced checksum generation/verification
    - Break field reception while frame is being transmitted/received
- Advanced features for LIN
  - Extended response reception and transmission (extension to any data count by software)
  - LIN Self-Test mode
  - Various settings for LIN frame timing (spacing, break/delimiter timing)
  - LIN Error detections
    - Bit errors (commonly, or in break/wakeup field ["physical bit error"])
    - Frame error (wrong STOP bit level)
    - Checksum error (received does not match internally calculated)
    - Timeout error (either frame or response, threshold automatically set) Response preparation error (for LIN master – on response if not yet triggered)

- Software processing flow
  - During a complete LIN message only two interrupts are generated. The first one after the successful PID reception and the second one after the complete message.

- Due to this enhanced LIN functionality the interrupt load will be drastically reduced compared to a standard UART.

## 2. Development environment

The sample code described in this application note runs under the conditions below.

Table 2.1 Development environment

Item	Contents
MCU	RL78/F14 R5F10PPJ (WS2.0)
	Xin: 4MHz
Operating frequencies	System clock: 32MHz (PLL)
	CPU clock: 32MHz
Operating voltage	5.0V for MCU, 12V for LIN transceiver
Integrated development environment	IAR Embedded workbench for Renesas RL78 V1.30.3
LIN protocol versions	V2.1
Evaluation Board	See figure 2.1

Figure 2.1 Evaluation board

## 3. Software

The sample code demonstrates the usage of the RLIN3 interface in LIN slave mode. The sample code runs on the QB-R5F10PPJ-TB, which is a target board for the RL78F13,F14 microcontroller family including a LIN transceiver. In slave mode, the RLIN3 waits for reception of header frame from the master. Upon detection of the header frame, the slave checks ID and response with a transmission or reception according to ID. A proper communication will be indicated by LED1 and LED2 mounted on the target boards.

### 3.1 Operation overview

Settings:

- Use channel of the RLIN3 to perform LIN communication in slave mode.
- Use the P1.3/LTXD0 pin for the transmit data output.
- Use the P1.4/LRXD0 pin for the receive data input.
- Set the auto baud rate for slave mode, RLIN3 can automatically measure synch field and setting baud rate by itself.
- Use the INTLINORVC interrupt; The INTLINORVC interrupt is generated after a LIN successful header reception or response reception.
- Use the INTLIN0TRM interrupt; The INTLIN0TRM interrupt is generated after a LIN successful response transmission.
- Use the INTLINO interrupt; The INTLINO interrupt is generated when an Error on the bus was detected. A complete error handling is not implemented.
- Communication direction and number of transmit/receive date at a response field are determined by the ID data received at the ID field.
- ID data store in the ID buffer register LIDB0.
- Auto store data received at the field to data buffer register LDB01-LDB08, then get data from ID Buffer and store to Slave\_RxData1[], Slave\_RxData2[], Slave\_RxData3[]according to ID and clear the Data buffer.
- Set Slave\_TxData[] to data buffer LDB01-LDB08 and setting RTS bit to start transmission.

## 3.2 Functions and Resource Consumption

Function Name	Outline	Code size (bytes)
RLIN_Slave_Init	Initial setting	91
RLIN_Slave_HeaderReceive	Header receive preparation	11
RLIN_Slave_Transmit	Data transmission preparation	57
RLIN_Slave_Receive	Data reception preparation	22
RLIN_Slave_NoResponse	No response to LIN bus	5
Clear_DataBuffer	Setting all data buffer to 0	26
Get_response_RxData	Store data to variables array from Data buffer	41

Table 3.1 lists the Functions

## 3.3 Function Specifications

The following tables list the sample code function specifications

RLIN_Slave_Init	
Outline	Initial setting of RLIN3's registers in slave mode
Header	None
Declaration	void RLIN_Slave_Init(void)
Description	Setting of channe1, clock, baud rate, interrupts, header format.
Arguments	None
Returned value	None

Table 3.2 RLIN\_Slave\_Init

RLIN_Slave_HeaderReceive		
Outline	Header receive preparation	
Header	None	
Declaration	void RLIN_Slave_headerReceive(void)	
Description	Set RLIN3 to slave mode, set header reception start	
Arguments	None	
Returned value	None	

Table 3.3 RLIN\_Slave\_HeaderReceive

RLIN_Slave_Transmit		
Outline	Data transmission preparation	
Header	None	
Declaration	<pre>void RLIN_Slave_Transmit(uint8_t * databuf, uint8_t data_length)</pre>	
Description	Setting data buffer and response transmission start	
Arguments	uint8_t * databuf	Transmit data
	uint8_t data_length	Transmission data length
Returned value	None	

Table 3.4 RLIN\_Slave\_Transmit

RLIN_Slave_Receive		
Outline	Data reception preparation	
Header	None	
Declaration	void RLIN_Slave_Receive(uint8_t data_length)	
Description	Clear data buffer, setting reception format, response reception start	
Arguments	uint8_t data_length	Receive data length
Returned value	None	

Table 3.5 RLIN\_Slave\_Receive

RLIN_NoResponse	
Outline	No response to LIN bus
Header	None
Declaration	void RLIN_Slave_NoResponse(void)
Description	Slave node does not response anything when ID invalid
Arguments	None
Returned value	None

Table 3.6 RLIN\_NoResponse

Clear_DataBuffer	
Outline	Clear all data buffer to 0
Header	None
Declaration	void Clear_DataBuffer(void)
Description	Clear the complete data buffer
Arguments	None
Returned value	None

Table 3.7 Clear\_DataBuffer

Get_response_RxData		
Outline	Store data to variable array from I	D buffer
Header	None	
Declaration	uint8_t Get_response_RxData(uint8_t * RxData)	
Description	Get reception data to variable array	
Arguments	uint8_t * RxData	Data variable array
Returned value	RxData[1]	

Table 3.8 Get\_response\_RxData

## 3.4 Flowcharts

## 3.4.1 Main flowchart

Figure 3.1 show the main processing

## 3.4.2 Initial RLIN flowchart

Figure 3.2 show the RLIN initial processing

## 3.4.3 Slave transmit flowchart

Figure 3.3 show the slave transmit processing

## 3.4.4 Slave receive flowchart

Figure 3.4 show the slave receive processing

Figure 3.5 show the reception interrupt processing

## 4. Demo system

The below pictures shows the demo system consists out of two RL78 F14 target boards. One board is runningn in master mode and the second one in slave mode. The software from the slave mode is part of this application note, where the master mode is described in a separate document. Both boards are connected via the LIN interface. The slave is indicating proper data communication via the two LEDs mounted on the target boards

Figure 4.1 Picture of the demo system

In the below state diagram of the slave you will find the different internal states of the slave demo with the corresponding LED

		Description	
Rev.	Date	Page	Summary
1.00	25.Sep.2013		First edition issued
1.01	29.May 2015		1 <sup>st</sup> revision, source code changed on page 20 , control of LIE0 register removed.
1.02	24 Jan 2017		2 <sup>nd</sup> revision setting of LWUP and ISC corrected

## General Precautions in the Handling of MPU/MCU Products

The following usage notes are applicable to all MPU/MCU products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

- 1. Handling of Unused Pins
  - Handle unused pins in accord with the directions given under Handling of Unused Pins in the manual.
  - The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.
- 2. Processing at Power-on
  - The state of the product is undefined at the moment when power is supplied.
    - The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.

In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

3. Prohibition of Access to Reserved Addresses

Access to reserved addresses is prohibited.

- The reserved addresses are provided for the possible future expansion of functions. Do not access
  these addresses; the correct operation of LSI is not guaranteed if they are accessed.
- 4. Clock Signals

After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

#### 5. Differences between Products

Before changing from one product to another, i.e. to a product with a different type number, confirm that the change will not lead to problems.

— The characteristics of an MPU or MCU in the same group but having a different part number may differ in terms of the internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

#### Notice

- Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
- 2. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
- Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
- 4. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.
- Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

\*Standard\*: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.

\*High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; and safety equipment etc.

Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.

- 6. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
- 7. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.
- 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- 9. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.
- It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document, Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.
- 11. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
- 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
