

To our customers,

---

## Old Company Name in Catalogs and Other Documents

---

On April 1<sup>st</sup>, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1<sup>st</sup>, 2010  
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

## **Preliminary Application Note**

# **V850E/IF3, V850E/IG3**

**32-bit Single-Chip Microcontrollers**

**Sample Programs for Timer AB**

---

**V850E/IF3:**

**$\mu$ PD70F3451**

**$\mu$ PD70F3452**

**V850E/IG3:**

**$\mu$ PD70F3453**

**$\mu$ PD70F3454**

[MEMO]

① **VOLTAGE APPLICATION WAVEFORM AT INPUT PIN**

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between  $V_{IL}$  (MAX) and  $V_{IH}$  (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between  $V_{IL}$  (MAX) and  $V_{IH}$  (MIN).

② **HANDLING OF UNUSED INPUT PINS**

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to  $V_{DD}$  or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ **PRECAUTION AGAINST ESD**

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ **STATUS BEFORE INITIALIZATION**

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

⑤ **POWER ON/OFF SEQUENCE**

In the case of a device that uses different power supplies for the internal operation and external interface, as a rule, switch on the external power supply after switching on the internal power supply. When switching the power supply off, as a rule, switch off the external power supply and then the internal power supply. Use of the reverse power on/off sequences may result in the application of an overvoltage to the internal elements of the device, causing malfunction and degradation of internal elements due to the passage of an abnormal current.

The correct power on/off sequence must be judged separately for each device and according to related specifications governing the device.

⑥ **INPUT OF SIGNAL DURING POWER OFF STATE**

Do not input signals or an I/O pull-up power supply while the device is not powered. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Input of signals during the power off state must be judged separately for each device and according to related specifications governing the device.

Caution: This product uses SuperFlash® technology licensed from Silicon Storage Technology, Inc.

**SuperFlash is a registered trademark of Silicon Storage Technology, Inc. in several countries including the United States and Japan.**

- **The information contained in this document is being issued in advance of the production cycle for the product. The parameters for the product may change before final production or NEC Electronics Corporation, at its own discretion, may withdraw the product prior to its production.**
- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special", and "Specific". The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics products before using it in a particular application.
  - "Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.
  - "Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).
  - "Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)

- (1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).

M5 02. 11-1

## INTRODUCTION

- Cautions**
1. This Application Note explains a case where the V850E/IG3 is used as a representative microcontroller. Use this Application Note for your reference when using the V850E/IF3.
  2. Download the program used in this manual from the page of Programming Examples (<http://www.necel.com/micro/en/designsupports/sampleprogram/index.html>) in the NEC Electronics Website (<http://www.necel.com/>).
  3. The sample programs are provided for reference purposes only and operations are therefore not subject to guarantee by NEC Electronics Corporation. When using sample programs, customers are advised to sufficiently evaluate this product based on their systems, before use.
  4. When using sample programs, reference the following startup routine and link directive file and adjust them if necessary.
    - Startup routine: `ig3_start.s`
    - Link directive file: `ig3_link.dir`

**Target Readers** This Application Note is intended for users who understand the functions of the V850E/IF3 ( $\mu$ PD70F3451, 70F3452), and V850E/IG3 ( $\mu$ PD70F3453, 70F3454), and who design application systems that use these microcontrollers.

**Purpose** This manual is intended to give users an understanding of the basic functions of the V850E/IF3 and V850E/IG3, using the application programs.

**How to Use This Manual** It is assumed that the reader of this Application Note has general knowledge in the fields of electrical engineering, logic circuits, and microcontrollers.

For details of hardware functions (especially register functions, setting methods, etc.) and electrical specifications

→ See the **V850E/IF3, V850E/IG3 Hardware User's Manual**.

For details of instruction functions

→ See the **V850E1 Architecture User's Manual**.

**Conventions**

Data significance:	Higher digits on the left and lower digits on the right
Active low representation:	$\overline{\text{xxx}}$ (overscore over pin or signal name)
Memory map address:	Higher addresses on the top and lower addresses on the bottom
<b>Note:</b>	Footnote for item marked with <b>Note</b> in the text
<b>Caution:</b>	Information requiring particular attention
<b>Remark:</b>	Supplementary information
Numeric representation:	Binary ... xxxx or xxxxB
	Decimal ... xxxx
	Hexadecimal ... xxxxH
Prefix indicating the power of 2 (address space, memory capacity):	K (kilo): $2^{10} = 1,024$
	M (mega): $2^{20} = 1,024^2$
	G (giga): $2^{30} = 1,024^3$

The function lists are structured as follows.

## Theme

[Function]	Function description
[Function name]	Name of sample function
[Argument(s)]	Type and overview of argument(s)
[Processing content]	Processing content of sample function
[SFR(s) used]	Register name and setting content
[call function(s)]	Name and function of call function(s)
[Variable(s)]	Type, name, and overview of variable(s) used in sample function
[Interrupt(s)]	Name of function
[Interrupt source(s)]	Name
[File name]	Name of corresponding sample program file
[Caution(s)]	Caution(s) upon function usage

## Interrupt function

[Function name]	Name of interrupt function
[Overview]	Servicing content
[Source(s)]	Name of interrupt and conditions for occurrence
[call function(s)]	None
[Variable(s)]	Name of variable, function
[File name]	Name of corresponding sample program file
[Caution(s)]	None

## Related Documents

The related documents indicated in this publication may include preliminary versions. However, preliminary versions are not marked as such.

## CHAPTER 1 INTERVAL TIMER MODE

[Function]	<p>Starts 16-bit counter operation by setting the TAB0CTL0.TAB0CE bit to 1.</p> <p>Outputs an interrupt request signal (INTTB0CC0) at an interval set by the TAB0CCR0 register.</p> <p>Inverts the TOB00 pin output when the value set by the CCR0 buffer register and the count value of the 16-bit counter match.</p> <p>Inverts the TOB01 pin output when the value set by the CCR1 buffer register and the count value of the 16-bit counter match.</p> <p>Can be implemented with TAB0 and TAB1.</p>
[Function name]	main
[Argument]	None
[Processing content]	<p>Performs count operation of an fxx/32 count clock, generates an interrupt by inverting the TOB00 pin output upon the count subsequent to the count whose value matches the value of the CCR0 buffer register, and clears the 16-bit counter.</p> <p>Generates an interrupt by inverting the TOB01 pin output upon the count subsequent to the count whose value matches the value of the CCR1 buffer register.</p> <p>TOB00 and TOB01 pins start output at high level.</p>
[SFR used]	None
[call function]	timerab_interval_ini, timerab_interval_st
[Variable]	None
[Interrupts]	<p>timerab_TAB0CC0_int</p> <p>timerab_TAB0CC1_int</p>
[Interrupt sources]	<p>INTTB0CC0</p> <p>INTTB0CC1</p>
[File name]	timerab_interval\MAIN.C
[Caution]	None

The interval time can be calculated by the following formula.

$$\text{Interval} = (\text{Set value of TAB0CCR0 register} + 1) \times \text{Count clock cycle}$$

---

---

---

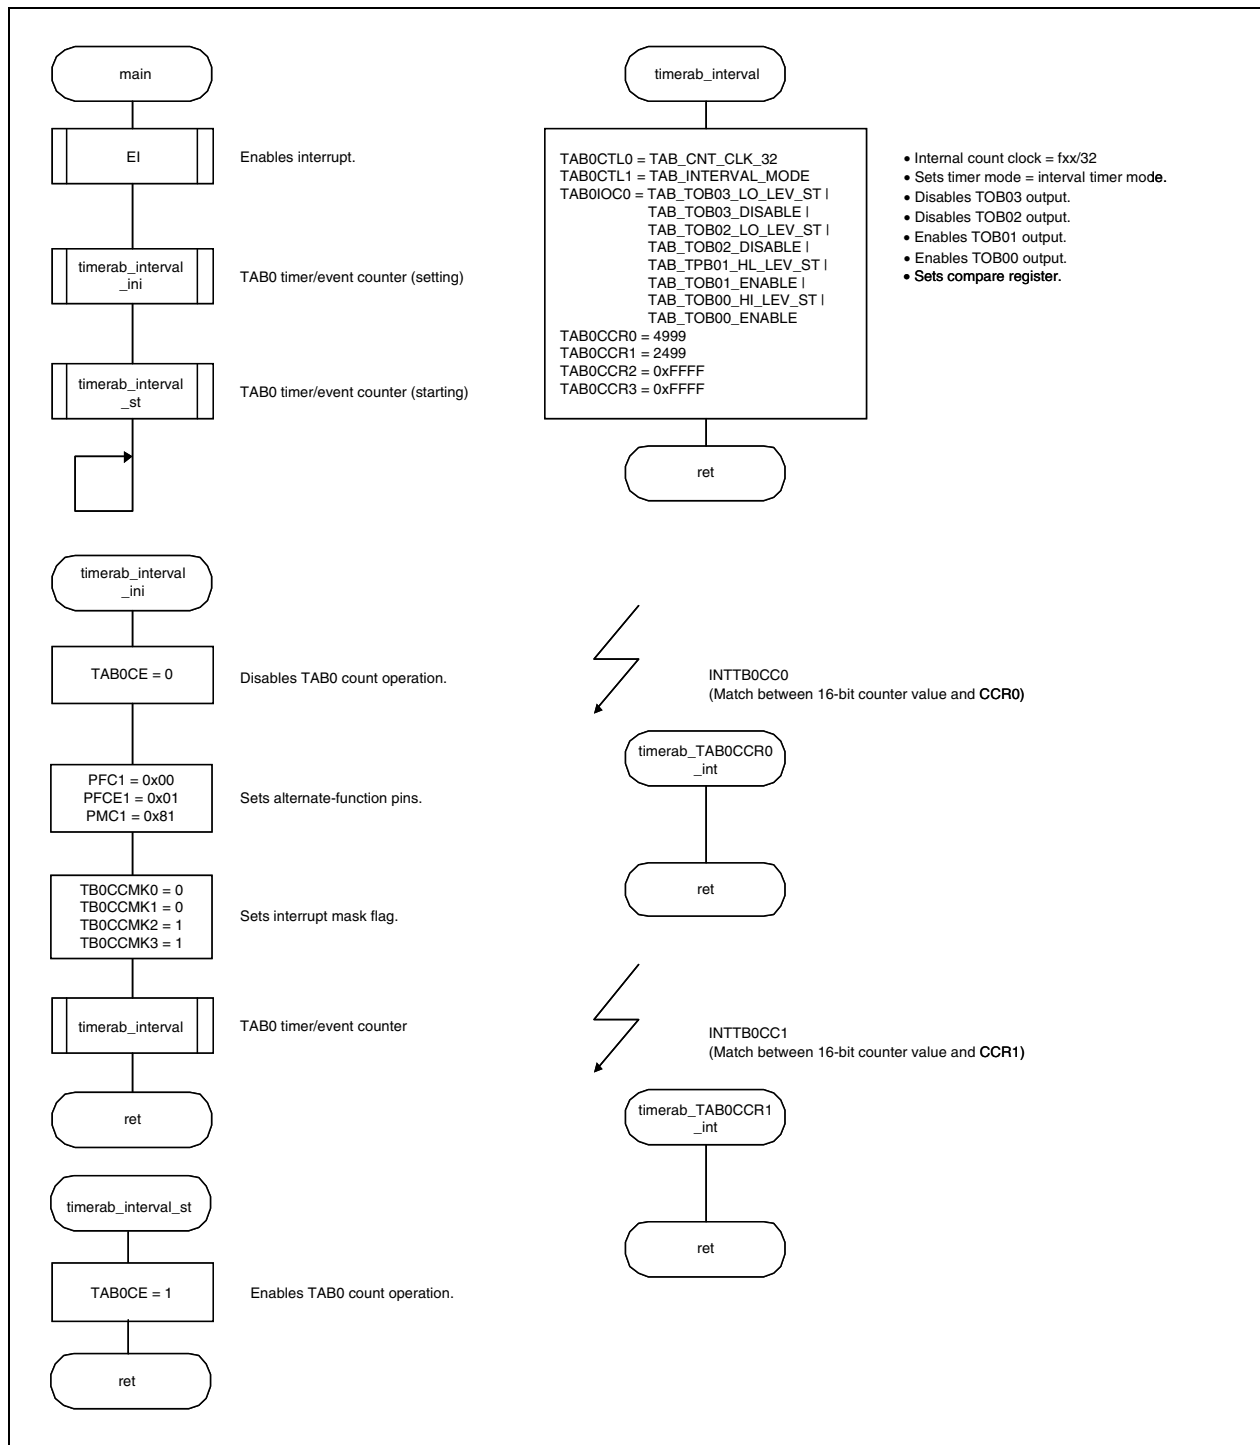

[Function name]	timerab_interval_st
[Argument]	None
[Processing content]	Starting function of timerab_interval.
[Starting method]	Call this function after the timerab_interval function.
[SFR used]	TAB0CTL0.TAB0CE:1 (Enables TAB0 operation.)
[call function]	None
[Variable]	None
[File name]	timerab_interval\timerab_1.c
[Caution]	None

## Interrupt function

[Function name]	timerab_TAB0CC0_int
[Overview]	Defined by the user.
[Source]	INTTB0CC0      Match between the count value of the 16-bit counter and CCR0 buffer register
[call function]	None
[Variable]	None
[File name]	timerab_interval\timerab_1.c
[Caution]	None

[Function name]	timerab_TAB0CC1_int
[Overview]	Defined by the user.
[Source]	INTTB0CC1      Match between the count value of the 16-bit counter and CCR1 buffer register
[call function]	None
[Variable]	None
[File name]	timerab_interval\timerab_1.c
[Caution]	None

Figure 1-1. Interval Timer Mode

## CHAPTER 2 EXTERNAL EVENT COUNT MODE

[Function]	<p>Counts the valid edge of the external event count input (EVTB0 pin) and generates an interrupt request signal (INTTB0CC0) each time the count reaches the count value set by the TAB0CCR0 register. (Clears the 16-bit counter simultaneously.)</p> <p>Generates an interrupt request signal (INTTB0CC1) when the value set by the CCR1 buffer register and the count value of the 16-bit counter match.</p> <p>Can be implemented with TAB0 and TAB1.</p>
[Function name]	main
[Argument]	None
[Processing content]	<p>Counts the valid edge of the external event count input, generates an interrupt upon the count subsequent to the count whose value matches the value of the CCR0 buffer register, and clears the 16-bit counter.</p> <p>Generates an interrupt upon the count subsequent to the count whose value matches the value of the CCR1 buffer register.</p>
[SFR used]	None
[call function]	timerab_event_count_ini, timerab_event_count_st
[Variable]	None
[Interrupts]	<p>timerab_TAB0CC0_int</p> <p>timerab_TAB0CC1_int</p>
[Interrupt sources]	<p>INTTB0CC0</p> <p>INTTB0CC1</p>
[File name]	timerab_event_count\MAIN.C
[Caution]	None

[Function name]	timerab_event_count_ini
[Argument]	None
[Processing content]	Sets the TAB0 operation and interrupts, and sets the alternate-function of the P14 pin to the EVTB0 input pin.
[SFR used]	TAB0CTL0.TAB0CE:0 (Disables TAB0 operation.) PFC1: 0x10 (Sets EVTB0 input pin.) PFCE1: 0x00 (Sets EVTB0 input pin.) PMC1: 0x10 (Sets EVTB0 input pin.) IMR1.TB0CCMK0: 0 (Enables INTTB0CC0 interrupt.) IMR1.TB0CCMK1: 0 (Enables INTTB0CC1 interrupt.) IMR1.TB0CCMK2: 1 (Disables INTTB0CC2 interrupt.) IMR1.TB0CCMK3: 1 (Disables INTTB0CC3 interrupt.)
[call function]	timerab_event_count
[Variable]	None
[File name]	timerab_event_count\timerab_2.c
[Caution]	None

[Function name]	timerab_event_count
[Argument]	None
[Processing content]	Sets TAB0 control register.
[SFR used]	TAB0CTL0: 0x00 (Sets count clock.) TAB0CTL1: 0x01 (Sets external event count mode.) TAB0IOC2: 0x08 (Sets valid edge of the external event count input signal (EVTB0 pin) to falling edge detection.) TAB0CCR0: 40 (Compare register of 16-bit counter) TAB0CCR1: 20 (Compare register of 16-bit counter) TAB0CCR2: 0xFFFF (Compare register of 16-bit counter) TAB0CCR3: 0xFFFF (Compare register of 16-bit counter)
[call function]	None
[Variable]	None
[File name]	timerab_event_count\timerab_2.c
[Cautions]	<ul style="list-style-type: none"> <li>When the TAB0CCR2 and TAB0CCR3 registers are not used, it is recommended to set the TAB0CCR2 and TAB0CCR3 registers to FFFFH. Mask the interrupt mask flag (IMR1.TB0CCMK2, IMR1.TB0CCMK3).</li> <li>The following caution is required to set register. Set TAB0IOC0 to 0x00.</li> </ul>

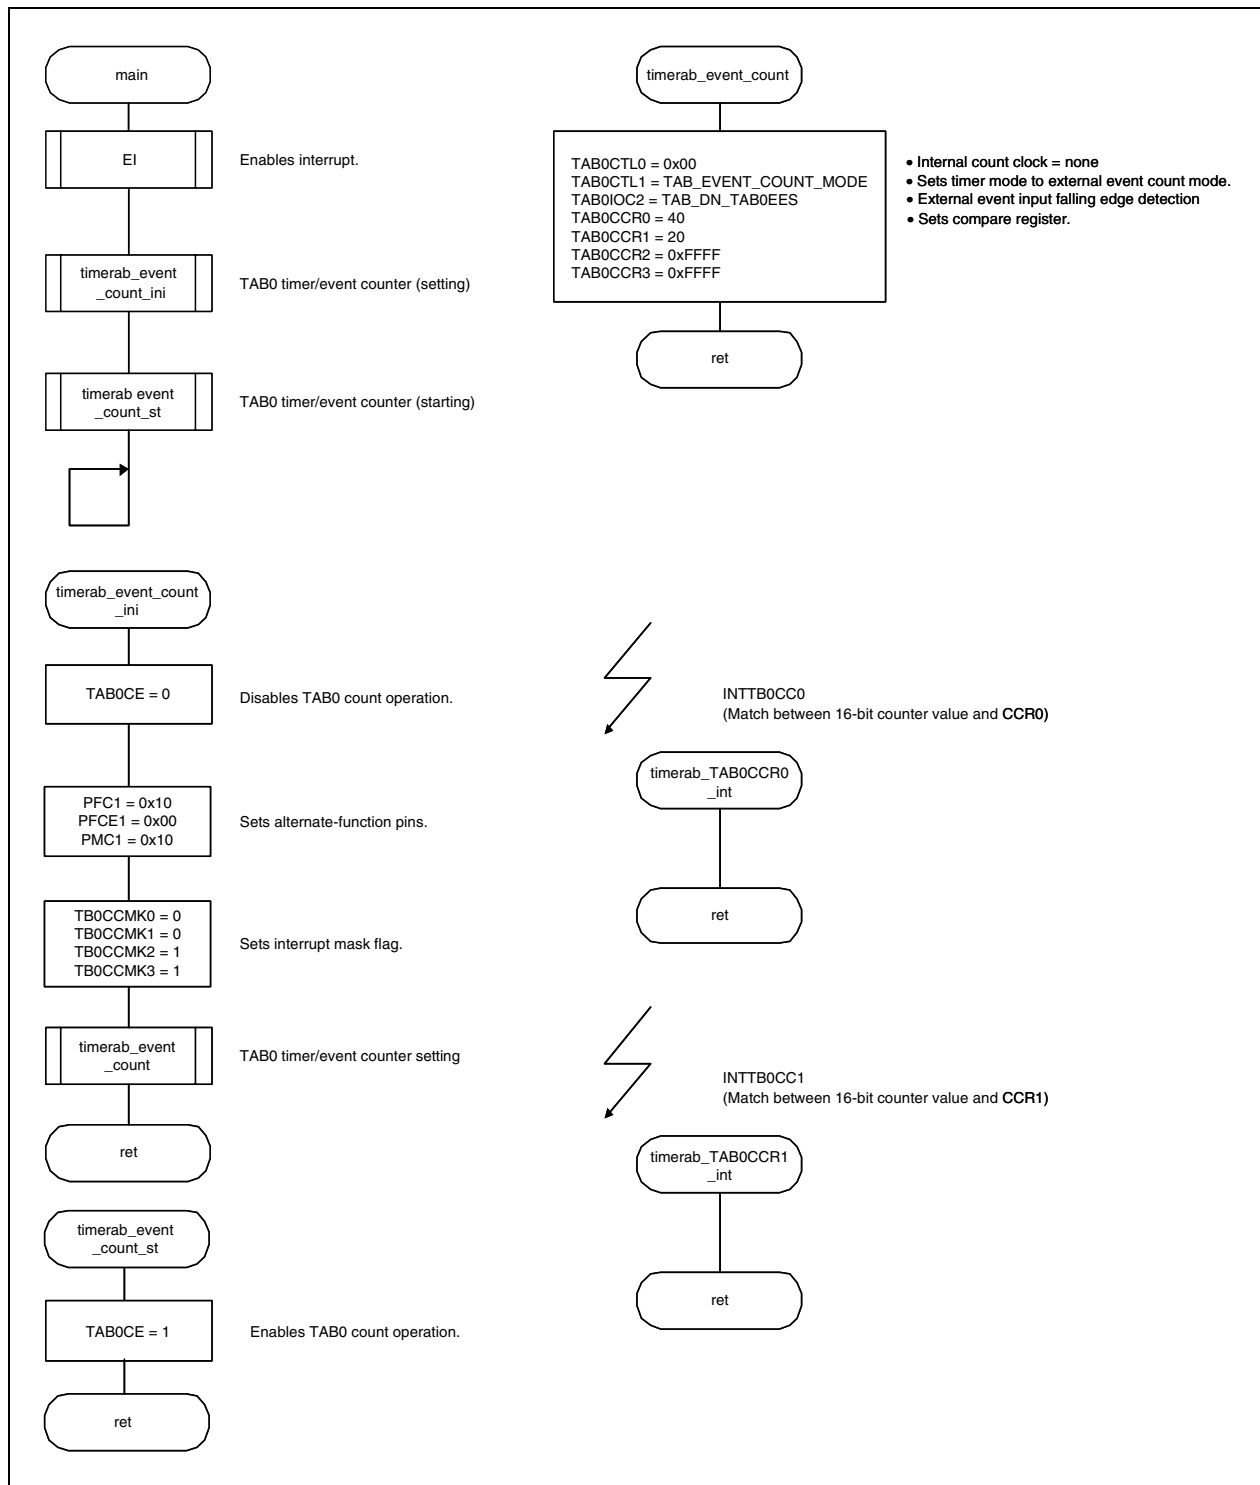

[Function name]	timerab_event_count_st
[Argument]	None
[Processing content]	Starting function of timerab_event_count.
[Starting method]	Call this function after calling the timerab_event_count function.
[SFR used]	TAB0CTL0.TAB0CE:1 (Enables TAB0 operation.)
[call function]	None
[Variable]	None
[File name]	timerab_event_count\timerab_2.c
[Caution]	None

## Interrupt function

[Function name]	timerab_TAB0CC0_int
[Overview]	Defined by the user.
[Source]	INTTB0CC0      Match between the count value of the 16-bit counter and CCR0 buffer register
[call function]	None
[Variable]	None
[File name]	timerab_event_count\timerab_2.c
[Caution]	None

[Function name]	timerab_TAB0CC1_int
[Overview]	Defined by the user.
[Source]	INTTB0CC1      Match between the count value of the 16-bit counter and CCR1 buffer register
[call function]	None
[Variable]	None
[File name]	timerab_event_count\timerab_2.c
[Caution]	None

Figure 2-1. External Event Count Mode

## CHAPTER 3 EXTERNAL TRIGGER PULSE OUTPUT MODE

[Function]	<p>Starts operation of the 16-bit counter by detecting the valid edge of the external event count input (EVTB0 pin) when the valid edge of the external trigger input (TRGB0 pin) is detected.</p> <p>Inverters TOB00 pin output upon a match between the CCR0 buffer register value and the 16-bit counter value, and clears the 16-bit counter.</p> <p>Inverts the TOB01 pin output upon a match between the CCR1 buffer register value and the 16-bit counter value.</p> <p>Inverts the TOB01 pin output when the 16-bit counter is cleared.</p> <p>Can be implemented with TAB0 and TAB1.</p>
[Function name]	main
[Argument]	None
[Processing content]	<p>Starts count operation by detecting the valid edge of the external event count input when the valid edge of the external trigger input is detected, generates an interrupt by inverting the TOB00 pin output upon the count subsequent to the count whose value matches the value of the CCR0 buffer register, and clears the 16-bit counter.</p> <p>Generates an interrupt by inverting the TOB01 pin output upon a match between the count value and the CCR1 buffer register value.</p> <p>TOB00 and TOB01 pins start output at high level.</p>
[SFR used]	None
[call function]	timerab_trigger_pulse_ini, timerab_trigger_pulse_st
[Variable]	None
[Interrupts]	<p>timerab_TAB0CCR0_int</p> <p>timerab_TAB0CCR1_int</p>
[Interrupt sources]	<p>INTTB0CCR0</p> <p>INTTB0CCR1</p>
[File name]	timerab_trigger_pulse\MAIN.C
[Caution]	None

The active level width, cycle and duty factor of the PWM waveform can be calculated by the following formulas.

Active level width = (Set value of TAB0CCR1 register) × Count clock cycle

Cycle = (Set value of TAB0CCR0 register + 1) × Count clock cycle

Duty factor = (Set value of TAB0CCR1 register) / (Set value of TAB0CCR0 register + 1)

[Function name]	timerab_trigger_pulse_ini
[Argument]	None
[Processing content]	Sets the TAB0 operation and interrupts, and sets the alternate function of the P10 pin to the TOB01 output, the P14 pin to the EVTB0 input, the P15 pin to the TRGB0 input, and the P17 pin to the TOB00 output.
[SFRs used]	<p>TAB0CTL0.TAB0CE: 0 (Disables TAB0 operation.)</p> <p>PFC1: 0x30 (Sets TOB01 output pin, EVTB0 input pin, TRGB0 input pin, TOB00 output pin.)</p> <p>PFCE1: 0x01 (Sets TOB01 output pin, EVTB0 input pin, TRGB0 input pin, TOB00 output pin.)</p> <p>PMC1: 0xB1 (Sets TOB01 output pin, EVTB0 input pin, TRGB0 input pin, TOB00 output pin.)</p> <p>IMR1.TB0CCMK0: 0 (Enables INTTB0CC0 interrupt.)</p> <p>IMR1.TB0CCMK1: 0 (Enables INTTB0CC1 interrupt.)</p> <p>IMR1.TB0CCMK2: 1 (Disables INTTB0CC2 interrupt.)</p> <p>IMR1.TB0CCMK3: 1 (Disables INTTB0CC3 interrupt.)</p>
[call function]	timerab_trigger_pulse
[Variable]	None
[File name]	timerab_trigger_pulse\timerab_3.c
[Caution]	None

[Function name]	timerab_trigger_pulse
[Argument]	None
[Processing content]	Sets TAB0 control register.
[SFRs used]	<p>TAB0CTL0: 0x00 (Sets count clock.)</p> <p>TAB0CTL1: 0x62 (Enables operation with the external event count input signal (EVTB0 pin), sets external trigger pulse output mode.)</p> <p>TAB0IOC0: 0xA5 (Sets TOB00 and TOB01 pins' output to high-level start, enables timer output, sets TOB02 and TOB03 pins' output to low-level start, disables timer output.)</p> <p>TAB0IOC2: 0x0A (Sets valid edges of the external event count input signal (EVTB0 pin) and external trigger input signal (TRGB0 pin) to falling edge detection.)</p> <p>TAB0CCR0: 40 (Compare register of 16-bit counter)</p> <p>TAB0CCR1: 10 (Compare register of 16-bit counter)</p> <p>TAB0CCR2: 0xFFFF (Compare register of 16-bit counter)</p> <p>TAB0CCR3: 0xFFFF (Compare register of 16-bit counter)</p>

## CHAPTER 7 PULSE WIDTH MEASUREMENT MODE

[Function]	<p>Starts operation of the 16-bit counter by setting the TAB0CTL0.TAB0CE bit to 1.</p> <p>Stores the count value to the TAB0CCR0 register when the valid edge of the capture trigger input (TIB00 pin) is detected, and clears the 16-bit counter.</p> <p>Measures the valid edge interval of the TIB00 pin by generating an interrupt when the valid edge of the TIB00 pin input is detected and reading the TAB0CCR0 register value.</p> <p>Can be implemented with TAB0 and TAB1.</p>
[Function name]	main
[Argument]	None
[Processing content]	<p>Performs count operation of an fxx/32 count clock, generates an interrupt by storing the count value of the 16-bit counter to the TAB0CCR0 register when the valid edge of the TIB00 pin input is detected, and clears the 16-bit counter.</p> <p>Generates an INTTB0OV interrupt when a 16-bit counter overflow is detected.</p>
[SFR used]	None
[call function]	timerab_pulse_measure_ini, timerab_pulse_measure_st
[Variable]	None
[Interrupts]	<p>timerab_TAB0CC0_int</p> <p>timerab_TAB0OV_int</p>
[Interrupt sources]	<p>INTTB0CC0</p> <p>INTTB0OV</p>
[File name]	timerab_pulse_measure\MAIN.C
[Caution]	None

The pulse width can be calculated by the following formula.

$$\text{Pulse width} = \text{captured value} \times \text{Count clock cycle}$$

The pulse width when the 16-bit counter overflow is detected can be calculated by the following formula.

$$\text{Pulse width} = (10000H \times \text{number of times the TAB0OVF bit is set} + \text{captured value}) \times \text{count clock cycle}$$

[Function name]	timerab_pulse_measure_ini
[Argument]	None
[Processing content]	Sets the TAB0 operation and interrupts, sets the alternate function of the P13 pin to TIB00 input.
[SFRs used]	TAB0CTL0.TAB0CE: 0 (Disables TAB0 operation.) PFC1: 0x08 (Sets TIB00 input pin.) PFCE1: 0x00 (Sets TIB00 input pin.) PMC1: 0x08 (Sets TIB00 input pin.) IMR1.TB0CCMK0: 0 (Enables INTTB0CC0 interrupt.) IMR1.TB0CCMK1: 1 (Disables INTTB0CC1 interrupt.) IMR1.TB0CCMK2: 1 (Disables INTTB0CC2 interrupt.) IMR1.TB0CCMK3: 1 (Disables INTTB0CC3 interrupt.) IMR1.TB0OVMK: 0 (Enables INTTB0OV interrupt.)
