

INTRODUCING HVPAK™

ENHANCE YOUR ROBOT VACUUM DESIGN WITH HVPAK MOTOR DRIVER!

HVPAK (up to 26.4 V and 3 A per OUT) takes its roots from the [GreenPAK family](#) featuring its configurability and free GUI-based [software](#) to design the circuit without any programming language needed. It combines mixed-signal logic and **high-voltage H-/Half-bridge** functionality in **a tiny 2 mm x 3 mm QFN package**.

The HVPAK incorporates advanced PWM macrocells, enabling the simultaneous control of multiple motors with varying PWM frequencies and duty cycles. Its compact size and low idle current consumption make it highly versatile, expanding its range of potential applications. This tiny and thermally-efficient IC provides an ideal platform for designing mixed-signal functions alongside its high-voltage capabilities.

**Constant voltage/speed
on the motor**

**Current limit –
motor/shaft stuck protection**

- No requirement to comply with any other software
- Low current consumption
- Highly configurable
- Battery discharge compensation
- Over current protection

HVPAK APPROACH: ROBOT VACUUM DESIGN

Original Design

HVPAK Solution

Design reduced by:

- 5 ICs
- up to 20 components
- reduced current consumption by five times
