RX FAMILY
Renesas 32-Bit Microcontrollers
32-bit microcontrollers built around an exclusive CPU core developed by Renesas

Maintaining and Advancing the Renesas Tradition

- The following new products have been added:
  RX600 Series: RX660, RX65W-A
  RX200 Series: RX23E-B, RX26T

- The following pages have been added:
  RX-E (for Sensor Measurement)
  Winning Combinations (Reference Designs)
  Renesas Ready Partner Network
RX Family MCUs are built around advanced CPU cores packed with innovations unique to Renesas. Based on proprietary technology amassed over many years, they are designed to deliver improved responsiveness and power efficiency in all aspects while combining excellent operation performance and low power consumption. The RX Family brings together a variety of technical innovations from Renesas and aims to define the ultimate in 32-bit MCUs with on-chip flash memory for the industrial, home electronics, office automation, and ICT fields.

Power and functionality poised to dominate the market:
The four powerful product series that compose the RX Family

The RX Family of 32-bit microcontrollers are built around Renesas’ exclusive RX CPU core and combine excellent operation performance with superior power efficiency. The family consists of four product series: the flagship RX700 Series, with the fastest performance and most advanced functions; the mainstream RX600 Series; the RX200 Series, which delivers an optimal balance of power efficiency and high performance; and the entry-level RX100 Series, with extremely low power consumption. These four series encompass a range of products that provide seamless scalability from small-scale to large-scale applications.
With a proven track record and superior reliability, the RX family of 32-bit microcontrollers is suitable for a wide range of applications in the industrial and home electronics fields and supports the full lineup of customer products with a seamless range of operating frequencies from 32MHz to 240MHz.

### Positioning of the RX Family

#### 32-bit MCU

**Power Efficiency**

Max operating frequency: 32MHz~240MHz

- Features:
  - Superior power efficiency
  - High-capacity flash memories
  - Broad lineup

#### 8/16-bit MCU

**Low Power**

Max operating frequency: 16MHz~32MHz

- Features:
  - Ultra low energy
  - Low pin count lineup available

#### 32/64-bit MPU

**High Performance**

Max operating frequency: 125MHz~1.5GHz

- Features:
  - Multi-core up to 8 cores
  - Linux or RTOS available
  - High-capacity on-chip RAM
  - DRP* image processing acceleration
  - DRP-AI DNN acceleration
  - DRP: Dynamically Reconfigurable Processor

#### 32-bit MCU

**Renesas Synergy™**

Max operating frequency: 32MHz~240MHz

- Features:
  - Qualified software and tools

### Features of the RX Family

The RX Family mainly comprises four series. The RX700 Series and RX600 Series are designed to deliver high speed and excellent performance. The RX200 Series and RX100 Series are optimized for low power consumption.

#### RX700 Series

**Up to 240MHz**

- 4MB Flash Max Dual Bank
- 2.7V to 5.5V 1441CoreMark @240MHz
- Ethernet USB, CAN SDHI
- Security Safety
- EtherCAT TFT LCD Motor

**Featured Products**

- RX23T
- RX140
- RX130
- RX13T

#### RX600 Series

**Up to 160MHz**

- 4MB Flash Max Dual Bank
- 2.7V to 5.5V 721CoreMark @120MHz
- Ethernet USB, CAN SDHI
- Security Safety
- TFT LCD Motor Capacitive Touch

#### RX200 Series

**Up to 120MHz**

- 1MB Flash Max
- 1.8 to 5.5V 0.12mA/MHz 0.8µA(stby)
- USB, CAN SDHI
- Security Safety
- Bluetooth Motor Capacitive Touch IA Sensor

#### RX100 Series

**Up to 48MHz**

- 512KB Flash Max
- 1.8 to 5.5V 0.1mA/MHz 0.25µA(stby)
- USB, CAN
- Security Safety
- Segment LCD Motor Capacitive Touch

*DRP: Dynamically Reconfigurable Processor*
The RX Family has products suitable for a variety of different applications.
RX Family Memory/Pin Lineup

RX Family MCUs are available in packages with pin counts from 32 to 177 pins and flash memory capacities from 4MB to 8KB. Customers can choose the product that best meets their needs from this extensive lineup.

**Contributing to the Development of Platforms in a Variety of Fields**

RX Family MCUs cover a wide performance range from 32MHz to 240MHz while providing abundant peripheral functions for many applications and excellent compatibility.
The RX Family is designed for compatibility across products in terms of CPU instructions, pin assignments, and functions.

- The instruction sets of the RXv1, RXv2, and RXv3 cores are intercompatible.
- The functions of RX Family MCUs are based on common IP cores, allowing for easy migration between RX products.
- The pin assignments of RX Family MCUs are fundamentally consistent with those of earlier Renesas products.
- Pin positions for digital peripheral functions can be selected from among multiple locations, simplifying the development of printed circuit boards.
- Compatibility among development environments has been enhanced, reducing the development burden and cost of tools while simplifying program management.

### Pin Compatibility between Series for Power Supply, Analog, and USB

Analog and USB pins are pin compatible. Power supply pins are compatible except in some devices which require additional pins.

### Existing Products and RX Extensibility

The RX Family covers the performance range of a variety of CPU cores utilized in earlier Renesas products.

Improved software reusability and unification of development environments allow the RX Family to provide seamless scalability when developing products over the entire model range from low- to high-end.
The crucial importance of functional safety is rising in the industrial field, aiming to maintain safety when malfunctions occur in order to prevent breakdowns and accidents during planned operation, adverse impacts from operator injuries, and associated economic losses. However, while equipment is required to meet functional safety standards and the scope of application to apply functional safety standard is expanding in many industrial fields, the development burden on customers is also increasing.

As a solution towards this problem, Renesas released a functional safety solution certified by the certification body.

**IEC61508 Functional Safety Solutions**

**Functional Safety Solution Overview**

As Renesas been the 1st MCU supplier to complete the verification of the core self test, Renesas provides functional safety solutions that reduce the development burden on customer and contributes to realize safe and reliable factories.

IEC61508 SIL3 certified products provide MCU self-test software, platform software to build dual MCU systems, safety network software, and safety compilers. In addition, we also provide evaluation boards of dual MCU configuration and technical document for acquiring IEC61508 certification and development, as a reference solution.

**Functional Safety Solution List**

The key features and our aim of our solution are;
- One-stop functional safety solution for general purpose MCU
- Reduces time for constructing functional safety systems
- Easy implementation of safety system for various safety applications such as motor, safety controllers, programmable logic controls, and sensors.

Free evaluation version available for download via our web.

Also, because to prove that compiler generates a valid code when constructing SW, Renesas original certified compiler and certification kit is available. Certified IAR compiler also available from IAR.
The IEC/UL60730 is the harmonized safety standard for household appliances. The standard describes control requirements for household appliances such as air conditioners, washing machines, dishwashers, dryers and refrigerators to guarantee safe and reliable operation.

Renesas offers a package for the RX family that includes self-test libraries and application notes that meet the IEC60730 Class B/C requirements. The self-test library is certified by a leading technical-scientific association and a copy of the test certificate is included in the download package. By using this package, you can reduce the burden of certification when acquiring IEC60730 certification for your application.
Renesas offers motor control solutions incorporating microcontrollers and analog products that are designed to enable reduced power consumption and quieter operation when driving brushless DC motors (permanent magnet synchronous motor) and stepping motors. Development tools optimized for each stage in the customer’s development workflow are available. They help shorten the time needed for development.

Motor Control Development Support Tool
Renesas Motor Workbench
- Dynamic reading/writing of variables and waveform display while operating the motor.
- Automatic identification of motor parameters and control gains required for vector control.
- Analyzer waveform display data is in csv format. Tuner identification results can be outputted as PDF file or header file.

Motor Driver Generation Function of RX Smart Configurator
This function generates driver code for MCU peripheral functions suitable for motor control. Simply enter motor-related settings via the GUI, click a button, and RX Smart Configurator generates drivers for the timer and A/D converter based on your settings.

MCK-XXXXX
Note: XXXXX designates the group name of the MCU mounted on the CPU board.
This motor solution includes a CPU board, inverter board, and communication board. Sample code and a development support tool are provided so you can get started with motor control immediately after purchase.

Features
- Equipped with onboard debugger for MCU flash programming.
- Supports 1-shunt and 3-shunt current detection.
- Overcurrent detection function.
- Supports the motor control development support tool “Renesas Motor Workbench” for easy debugging.
- Use of a communication board provides electrical isolation from the PC for safe evaluation and debugging of motor control applications.

MC-COM
The communication board for serial communication with a Renesas MCU. It provides an electrically isolated environment to enable safe evaluation and debugging of motor control applications.

Features
- Supports the motor control development support tool “Renesas Motor Workbench”.
- CPU board by manufacturers other than Renesas can be used by embedding code from libraries supported by Renesas Motor Workbench in the user’s motor control software.

Sample Software Supported MCUs

| 120-degree conducting control + Speed control (Hall, Sensorless) | RX23T, RX24T |
| Vector control + Speed control (Encoder, Sensorless) | RX13T, RX23T, RX24T, RX24U, RX66T, RX72T, RA4T1 |
| Vector control + Position control (Encoder) | RX23T, RX24T, RX24U, RX66T, RX72T, RA4T1 |

*1: Sensorless only.

Analyzer
Extensive functions include trigger, zoom, and commander transmission etc., useful for debugging and evaluation. Also usable as user I/F.

Tuner
Vector control at ease without know-how.
Fine adjustment at ease with manual adjustment function, as well as quick result check.

Interest has been growing in recent years in IoT as a means of creating new added value. But connecting IoT devices to the internet exposes them to risks such as eavesdropping, tampering, and execution of unauthorized software or viruses. This has caused demand for security to expand even to devices which previously did not require security functions.

### Security Features Provided by RX Security Solutions
- **Key protection:** Hardware secure IP module (Trusted Secure IP (TSIP)) prevents leaks of key data.
- **Simple implementation:** One-stop solutions for building robust protection mechanisms for IoT devices.
- **Operation management:** Support for life-cycle management from product shipment, market operation, and ODA updates to EOL.
- **Safe and secure:** First general-purpose MCU certified CMVP Level 3 under NIST*1 FIPS 140-2 (RX65N)*2 and encryption technology safety certified as CAVP conformant*3

**RX Security Solutions**

**RX Hardware-Based Security Functions**

The Root of Trust is implemented by the Trusted Secure IP module that protects key data from compromise and an authentication program that provides memory protection functionality against tampering. In addition, performing encryption processing in hardware boosts speed.

**Driver Software: Trusted Secure IP Custom Driver**

- Simple API reduces barriers to implementation.
- Optimized driver for high-speed encryption processing.
- No nondisclosure agreement (NDA) required, free of charge.
- Availability of sample programs for applications such as such as secure boot and secure update simplify development.

**Tool Service: Key Wrap Service**

This service securely encrypts customers’ encryption keys.

- PGP* is used for transfer of keys to ensure security. * PGP (Pretty Good Privacy) is public key encryption-based software that is widely used to encrypt data such as files and emails.
- The service is automated, so encrypted keys can be generated and supplied immediately.
- Support is provided for secure key installation.

RX Family cloud connectivity solutions make it possible to develop devices that connect to the cloud "simply, safely, and securely." On evaluation kits certified by leading cloud vendors, developers can run sample projects integrating realtime operating systems (FreeRTOS and Azure RTOS) and libraries (MQTT, TLS, OTA, etc.) from Amazon Web Services (AWS) and Microsoft Azure. Support is provided for tools such as QE for OTA, which simplifies complex OTA protocols, as well as functions essential for connecting to the cloud that utilize the security functionality built into Renesas products, such as "safe and secure firmware updating," “fast encryption and decryption,” and “robust key concealment.”

**Simply Selecting a Project in e² studio to Start Development**

In Renesas’ e² studio integrated development environment, you can select sample programs (MQTT communication, OTA functions, fleet provisioning, etc.) for AWS and Azure. Simply use Smart Configurator, which is integrated into e² studio, to configure clock and peripheral function settings to match the evaluation kit you are using, and you can get started with development and evaluation right away. The firmware update FIT module also supports secondary OTA for updating the firmware on MCUs that cannot connect to the cloud directly. This enables use of OTA in a wide variety of cases.

**Quick and Easy Implementation of Complex OTA Functions Using QE for OTA**

Implementing OTA functions involves following a complex series of steps. What’s more, the time required increases dramatically as the number of OTA target devices increases.

QE for OTA, which runs in e² studio, allows visualization of these complex steps using a GUI. Once the settings have been configured, processing of OTA functions can be performed automatically. You can execute OTA functions on multiple IoT devices simply by clicking a few buttons. QE for OTA also lets you check the status of devices after OTA functions are run, making it suitable for managing products that utilize OTA.

Capacitive Touch Solutions

RX Capacitive Touch Functionality

- Support for two capacitive touch technologies on a single chip:
  - Self-capacitance, which provides high sensitivity and proximity sensing, and mutual-capacitance, which provides superior water resistance.
- Accurate touch input even in harsh environments and excellent design flexibility.
- QE for Capacitive Touch program simplifies development by letting you easily adjust the sensitivity of touch sensors, previously a complex task, and control system operation.

Capacitive Touch Evaluation System

Using the board and software that come with the kit, you can get started with evaluation right away.

- Version for RX130 (RTK0EG0003S02001BJ)
- Version for RX140 (RTK0EG0039S01001BJ)
- Version for RX671 (RTK0EG0044S01001BJ)

[Product Contents]
- CPU board populated with RX140, RX671, or RX130
- Touch application board
  - Self-capacitance evaluation board
  - Supports basic capacitive touch controls, such as switches, sliders, and wheels.
  - Mutual-capacitance evaluation board*1
  - Mutual-capacitance matrix keys and self-capacitance proximity sensor

*1. Version for RX130 only

  - User’s manuals, application notes, sample code, circuit diagrams, pattern diagrams
These LCD solutions feature a graphic LCD controller (GLCDC) and large on-chip memory capacity (maximum 4MB ROM and 1MB RAM). Display resolutions up to WVGA (8-bit) are supported without requiring external memory. An integrated 2D rendering engine (DRW2D) ensures smooth graphics rendering with a reduced CPU processing load.

What’s more, new LCD display solutions are now available with an RX device as the standard MCU and employing an SPI interface. They are ideal for applications where cost efficiency is a priority or cases where a small, high-resolution display is required.

**GUI Evaluation Kit**

The Envision Kit (RX72N/RX65N) for GLCDC or DRW2D evaluation includes a WQVGA LCD and makes it easy to get started with GUI development.

- A debugger is included. Simply connect the board to a PC with a USB cable to start debugging.
- A preinstalled demo lets you experience the rendering performance of the 2D rendering engine.
- Compatible with the emWin for RX GUI tool from Segger. (Available free of charge to RX users.)
- Ample sample code and demos are available for download on the web.

The available sample LCD display applications using the SPI interface are quite similar to actual applications. Alongside QVGA LCD display applications, capacitive touch sensor operations can be evaluated at the same time.

**QE for Display (e² studio Plugin)**

This tool assists in GUI development by simplifying configuration of LCD panel settings and enabling links with GUI tools from Renesas partner vendors.

1. Simple LCD adjustment
   - Simplifies timing adjustments and picture quality adjustments.
   - Just click a button to update parameter values in registers. You can see the results on the LCD as you make adjustments.

2. Linkage with GUI tools from partner vendors
   - Download, install, and call tools from partner vendors.
   - Update projects with image data edited in tools.
   - Supports emWin for RX from Segger and Aeropoint GUI from CRI middleware.

**Voice Recognition Solutions**

By making use of voice recognition middleware from Renesas partner vendors developers can facilitate operation triggered by voice commands. With fast response not requiring access to a network and small memory requirements, these solutions make it possible to implement voice recognition even on MCUs with comparatively little on-chip memory, such as the RX200 Series. Support for directional sound collection functionality using a stereo microphone makes possible use even in noisy environments.

**RX72N Envision Kit/Renesas Starter Kit+ for RX671 Voice Recognition Demo**

- This demo lets the user experience screen transitions triggered by voice commands, noise tolerance, CPU load factors, and more.
- Perform evaluation while making changes to parameters such as threshold and directional strength.
- Demo firmware available on the web can be installed on the kit.
- An (optional) cloud connection function is available that enables synchronizing the operation results of voice commands with a cloud service (RX671 only).

Industrial networks are characterized by a variety of protocols coexisting side by side, each utilized for its own particular strongpoints. Renesas offers solutions that are compatible with multiple protocols to provide support for customers’ development efforts.

RX72M Network Solutions
The sample software supports EtherCAT® and other leading industrial network communication protocols that cover 70% of the market. Benefiting from collaboration with Renesas partner vendors, these sample program packages help reduce the development time required for implementation of protocols. The RX72M delivers superior performance with a 1461 CoreMark® score when operating at 240MHz together with large memory capacity, making it possible to realize a system on a single chip, reducing the BOM cost associated with development, and contributing to reduced device size.

RX72M Network Solution Boards
These solutions consist of an evaluation board mounted with an RX72M MCU ideal for initial evaluation of networked devices, OS, middleware, and sample code.

RX72M CPU Card with RDC-IC (RTX0EMXDE0C00000BJ)
- Supports BLDC motor and stepping motor control when combined with a compatible inverter board.
- A variety of sample code is provided.

Encoder vector control for permanent magnet synchronous motors
By installing encoder vector control software on an RX72M MCU, EtherCAT® communication and encoder brushless motor control can be implemented on a single chip.

Vector control for resolver-equipped stepping motors
By installing resolver vector control software on an RX72M MCU, EtherCAT® communication and resolver-equipped stepping motor control can be implemented on a single chip.
Bluetooth® Low Energy Solutions

RX Bluetooth solutions deliver industry-top-class power efficiency and smart connections, making them ideal for applications such as healthcare and fitness devices, consumer electronics, and RFID tags. Tools suitable for evaluating functions and performance as well as application development support are available.

### Protocol Stacks

#### Bluetooth Low Energy Protocol Stack (FIT)

This FIT module consists of a Bluetooth LE–conformant protocol stack and application development support software. It can be combined with Bluetooth profiles generated by QE for BLE to reduce the development time required for a wide range of applications. Additional support for application development is available in the form of sample programs using the protocol stack and a development guide.

#### Bluetooth Mesh Stack for RX Family

The Bluetooth Mesh Stack can be used to create a secure mesh network conforming to the Bluetooth Mesh networking standard. All mesh models are supported, so a variety of applications can be accommodated. In addition to sample programs compatible with the evaluation board for RX23W, there is also a sample smartphone application for network configuration.

### Development Support Tools

#### Bluetooth Low Energy Development Support Tool: QE for BLE

This tool runs on the e² studio integrated development environment and provides support for system development using the Bluetooth Low Energy protocol stack.

- Create custom profiles.
- Check Bluetooth LE communication.

#### Bluetooth Test Tool Suite (BTTS)

This Windows application provides a GUI for controlling the RX23W. It can help users evaluate Bluetooth functions and better understand the APIs provided with the protocol stack. BTTS also can be used as a tool for controlling devices undergoing certification testing under the Radio Law.

#### iOS/Android Application: GATTBrowser

GATTBrowser is a smartphone app for verifying the operation of Bluetooth LE applications developed using the RX23W. It can also connect to and transfer data with commercially available products that support Bluetooth LE.

#### Smartphone Sample Application: TryBT

TryBT is supplied as a project that can be used as a basis for developing smartphone applications by modifying its operation and design elements. In its initial form TryBT can be used to test communication with the software preinstalled on the target board.
The need for increasing added value and system complexity demands higher microcontroller performance. At the same time, energy saving and longer battery life is also needed, so lower power consumption is also demanded. The RX core continues to evolve even further to meet these demands.

*Availability of optional functions depends on product specifications
Feature 1: Original CPU That Inherits the Strengths of Its Predecessors

RX core combining advantages of CISC and RISC
- Combines the variable byte-length instructions of CISC with the general-purpose register machine, architecture, and pipelines of RISC. The RX CPU core brings together Renesas technology accumulated over many years.

Feature 2: RX CPU Core with Industry-Top-Class Performance

CoreMark/MHz value = 6.01
Superior embedded performance and power efficiency
- RX core features:
  - CPU developed in-house for high operational efficiency.
  - Five-stage superscalar architecture.
  - Optimized for power efficiency and high performance.
  - Processing capability and code efficiency on par with RISC.
  - Improved interrupt responsiveness and FPU/DSP instructions.

Feature 3: Pipeline Stage Configuration

- Harvard architecture enabling parallel execution of instruction fetches and data accesses.
- Five-stage pipeline configuration and out-of-order completion for even faster execution. (Allows no-wait execution of later instructions when there is no dependency between later and earlier instructions.)

**Pipeline Stage Configuration**
- 5-stage pipeline for faster processing
- Through benchmark testing of various types of application software, processing performance was more than doubled compared with earlier products.

**Out-of-Order Completion**
- Out-of-order completion boosts the efficiency and speed of instruction execution.

RXv2 CORE FEATURES

RXv2 Core: CPU Block Diagram

Further enhancements while maintaining compatibility with the RXv1 core

- Improved pipeline for substantial increase in the number of instructions per cycle (IPC)
- Advanced fetch unit with improved interface to on-chip flash memory. Reduces re-fetching of instructions due to penalty imposed by branch instructions and reduces the number of flash memory accesses. Achieves improved CPU performance alongside reduced power consumption.
- Improved instructions for DSP and FPU functions.

The memory access stage is only used when accessing the memory.

Improved pipeline processing and parallel execution of floating-point operations

- Floating-point operations take place in parallel during execution stages and memory access stages.
- Integer operation instructions and memory access or FPU instructions can execute at the same time.
- Contributes to improved FPU execution speed and CPU performance.

Feature 2: FPU and DSP Enhancements

Enhanced FPU and DSP functions

- Reduced execution cycle count for existing instructions and addition of new instructions.
- The number of accumulators with dedicated buffers has been increased from one to two for more efficient DSP operations.
- Performance in filter operations has been boosted fourfold.

RXv3 CORE FEATURES

The successor to the RXv2 core, the RXv3 core boosts performance with new functions while adding a double-precision FPU and a register bank save function. These improvements enable it to achieve a score of 5.82 CoreMark/MHz on the EEMBC CoreMark® benchmark test, among the best CPU performance levels in the industry. The RXv3 core contributes to extremely fast and efficient operations in a wide array of applications requiring real-time processing.

Feature 1: Register Bank Save Function

- Dedicated memory for improved interrupt responsiveness
  - Faster saving/restoring data to/from CPU registers and improved interrupt responsiveness.
  - “Register save banks” provided as dedicated memory for register saves.
  - Dedicated instructions (SAVE and RSTR) for accessing the register save banks.
  - Number of register save bank areas: 16 (RX72T)*1

Note: 1. Number of banks differs among products.

Comparison with conventional product (saving data to all registers)

Feature 2: Double-Precision FPU Support

- First RX Family CPU core with a double-precision floating-point processor.
- Greatly improved processing performance in double-precision floating-point operations (up to eight times better).

RX65N/RX651: Mainstream MCUs that Integrate Functions Essential for IoT Devices on a Single Chip

- Broad lineup ideal for a range of products, with flash memory capacity from 512KB to 2MB and package pin counts from 64 to 177 pins
- Easy implementation of secure firmware over-the-air (FOTA) updates essential for IoT devices

RX671: Support for Superior Power Efficiency, Hygienic User Interfaces, and Cloud-Connected IoT Applications

- Functionality for implementing a contactless UI using voice recognition or touch sensing and sophisticated system control on a single chip
- 4.5 × 4.5mm 64-pin BGA standard package enabling compact applications with more advanced functions

Contributing to Simpler System Configurations
A single-chip solution that supports larger memory requirements of communication protocol stack processing and accommodating an RTOS to enable operation processing on contactless UI devices.

RX72M, RX72N, and RX66N: Device Control and Network Functions on a Single Chip

- The flash memory supports the industry’s fastest read times when operating at 120MHz. This permits consistent peak CPU performance and is ideal for applications demanding excellent real-time performance.
- The on-chip memory capacity and number of general-purpose I/O ports are also the highest in the industry. This allows concentration of multiple functions on single chip, enabling more compact finished products and reduced development time.

Outstanding Realtime Performance
On the RX72M and RX72N there is only one wait cycle when a cache miss occurs. On the RX66N there generally are no wait cycles.

FOTA Solutions Bringing New Added Value
Firmware can be updated while the system continues to operate. Select wired or wireless connectivity to match the application. Authentication enables tampering detection and prevents unauthorized updates.

Multifunctionality and Compact Size
4MB flash memory, 1MB SRAM, and 182 general-purpose I/O ports on a single chip.
RX700/RX600 SERIES (Industrial/Appliances/Office Equipment/ICT)

RX660: 5V Power Supply Compatibility Combined with High-Performance CPU Core

- Support for 5V power supply with noise tolerance superior to that of 3V power supply reduces the need for external components to suppress noise.
- Features the latest RXv3 CPU core while retaining pin compatibility with other 5V products (such as the RX210).

![Input signal voltage range](image)

Helping to Improve System Noise Tolerance
Using a 5V power supply increases the dynamic range to 1.7 times that possible with a 3V power supply, which is valuable in scenarios requiring high-precision sensing. It also makes it possible to reduce the relative noise level.

Easy Migration from Other 5V MCUs
Pin compatibility with previous-generation products such as the RX210 makes it possible to switch to the latest high-performance CPU core while minimizing the system configuration burden.

RX65W-A: Wi-SUN FAN 1.1 Conformant Sub-GHz Communication MCU

- Conforms to the latest Wi-SUN FAN Profile: **Wi-SUN FAN 1.1**
- Support for two modulation methods: OFDM and FSK (max. 2.4Mbps)
- Support for main sub-GHz bands: US, EU, JP, and BR bands*
- Industry-top-class RF reception sensitivity: -109dBm in 50kbps SUN FSK
  -119dBm in 12.5kbps SUN OFDM

Renesas is a board member of the Wi-SUN Alliance.

The Wi-SUN FAN sub-GHz wireless communication standard provides high signal reachability, long-distance communication over a multi-hop mesh network, and a network automatic rebuild function yielding stable communications. Its use is growing in smart meters for electricity, gas, and water systems. Wi-SUN FAN is expected to be adopted and its market to expand as a means of linking IoT devices of all kinds as our smart society develops.

The RF firmware and Wi-SUN FAN 1.1 protocol software stack for the RX65W-A, as well as development tools and reference designs, provide support for customers developing IoT systems and making the smart society a reality.

High Performance CPU, Security, and Wireless Communications on a Single Chip

High performance RXv2 core capable of controlling multiple systems, Trusted Secure IP implementing robust security functions, and Bluetooth 5.0 Low Energy with enhanced connectivity functions, all on a single chip.

The lineup includes modular products with integrated antenna and oscillator. The module size is among the world's smallest, and the design enables use of a large number of MCU peripheral function pins. These modules are certified under the Radio Laws of Japan (technical standards compliance), North America (FCC/ISED), and Europe (CE), making it possible to bring products to market quickly.
RX100 SERIES (Industrial/Appliances/Office Equipment/ICT)

Features of RX100 Series

- Power consumption among the lowest in the industry
  - 48MHz
  - 0.25μA standby
- 5V power supply support
- Segment LCD support
- Superior cost/performance ratio

RX140 Concept

- Advanced ultralow power consumption
- Highest performance in the series
- Advanced capacitive touch
- Stronger security
- High compatibility

Advanced Ultralow Power Consumption
- Ideal for batteries and battery-driven applications

- Operating current: 52.5μA/MHz
- Standby current: 0.25μA
- Recovery time: Max. 6.9μs

Operating efficiency:
- Snooze mode allows peripheral functions to operate when in standby state.

- Ultralow current consumption during both standby and normal operation
- Fast recovery from standby to normal operation
- Snooze mode contributes to improved power efficiency for the entire system (touch measurement, reception of serial data, A/D conversion).

High-Precision AFE and MCU on a Single Chip

- High-precision AFE optimized for temperature and strain measurement in the industrial field
- High-performance MCU suitable for implementation of correction processing and digital signal processing
- Variety of communication interfaces enabling flexibility in system and board design

Sensor Measurement Reference Designs Using RX-E

Tiny Board for Digital Load Cell
This reference design employs the RX23E-A or RX23E-B MCU with on-chip high-precision AFE to implement a digital load cell. Using the RX23E-A or RX23E-B eliminates the need for a dedicated AFE, allowing use of a smaller board. The reference design uses a compact board (22mm × 16mm) small enough to allow integration into the load cell.

CH-to-CH Isolated Analog Measurement System
This is a reference design of a system employing four RX23E-A MCUs on mutually isolated channels to simultaneously measure temperature and voltage. The reference design makes use of the RX23E-A MCUs with on-chip high-precision AFE to implement distributed processing. It is ideal for applications with multiple analog inputs such as analog input modules, temperature controllers, recorders, and data acquisition.

Peltier Cooler
This reference design employs the RX23E-A MCU with on-chip high-precision AFE to implement a Peltier cooler. Peltier coolers utilize a phenomenon known as the Peltier effect to implement temperature controllers capable of both heating and cooling, and they are used in a wide range of temperature control applications. Using the RX23E-A makes it possible to use a single chip to implement the measurement, calculation, and control functions necessary for Peltier cooler temperature control.

Force Sensor
This reference design employs the RX23E-B to implement a 6-axis force sensor. Such a 6-axis force sensor would typically be installed in a location such as the tip of a robotic arm. It is composed of six strain sensors that measure load and torque on the x-, y-, and z-axes, a total of six values. Using the RX23E-B makes it possible to use a single chip to implement the A/D conversion and matrix processing necessary for 6-axis force sensor measurement.

RX-E Evaluation Board (Renesas Solution Starter Kit)
This Renesas Solution Starter Kit (RSSK) is an evaluation kit that supports deployment of RX-E Series MCUs. The RSSK comprises an evaluation board populated with the RX-E and peripheral circuits for sensor measurement, a GUI tool, and related application notes. It enables evaluation of an AFE, including the sensors needed for deployment, without the need to develop software.

Motor Control by RX

RX delivers high-speed arithmetic performance alongside MTU2 or MTU3, GPT timer, 12-bit A/D converter, and POE functions to simplify the process of implementing motor control.

### Waveform control/feedback control (MTU2 and MTU3, GPT, etc.)

- PWM waveform output
  - PWM output with 0 to 100% duty
  - 3-phase complementary PWM waveform output
  - Automatic insertion of dead time
  - A/D activation at user-defined timing for 1-shunt current detection

- Feedback control
  - Acquisition of feedback information (position/rotation rate) from encoder

### Disable control output signals (POE)

- Disable output signals for the MTU and the GPT without using software.
  - Forcibly disable complementary PWM output and realize fail-safe

### Feedback control (high-speed 12-bit A/D converter)

- Acquisition of feedback information using motor current
  - High-speed (1.0µs) 12-bit A/D converter
  - Simultaneous sampling of three tracks for 3-shunt current detection
  - Reduce BOM by using built-in comparator and PGA (some products)

Renesas’ integrated development environments provide powerful support for all aspects of embedded system development. Choose among applications based on open-source software, enabling use of a variety of extended functions, Renesas’ proprietary development environments, and products from our partner vendors to meet your specific requirements.

**CS+ Integrated Development Environment**
With a single install, this package provides access to the basic software tools you will need to develop software for Renesas MCUs. Recommended for users looking for a convenient way to make use of basic functions.

**IAR Embedded Workbench® for RX Integrated Development Environment**
This is the C/C++ integrated development environment most broadly used internationally as a high-performance and highly reliable commercial tool for embedded software development. The proprietary compiler from IAR Systems is industry-top-level in terms of speed and object code compactness. All functions are integrated seamlessly to maximize development efficiency. The static response analysis and dynamic response analysis add-ons provide a low-cost way for developers to dramatically increase the quality of their code.

** Developers’ Cloud Kit for Trying Out AWS and Azure Cloud Services**
A growing selection of starter kits you can start using immediately.

**Renesas C/C++ Compiler Package for RX Family (CC-RX)**
Provides powerful optimized features that help you realize the full performance potential of Renesas’ proprietary CPU cores and boost development efficiency. A selection of compiler licenses optimized for different development approaches as well as services and products related to long-term use of specific compiler versions, functional safety, etc., are available.

**Embedded OS with the best established track record in Japan and conformant with μITORN standard (RI600V4 and RI600PX)**
FreeRTOS, which supports connecting to AWS
Azure RTOS, which supports connecting to Azure

On-chip debugging emulators

- [E2 Emulator Lite]
  This entry-level model is recommended for novice users looking for a low-priced option. It can be used for a wide range of purposes, from education and initial evaluation through actual development.

- [E2 Emulator]
  This model provides high functionality for enhanced development efficiency. It supports fast downloads, external trigger I/O, and the use of hot plugins without the need for a separately purchased adapter.

- [E20 Emulator]
  This model enables even faster debugging. It provides high-capacity trace functionality and RAM monitoring functionality suitable for use with the RX600 and RX700.

Renesas Flash Programmer
flash memory programming software

- PG-FP6 standalone flash programmer

- [QE for Current Consumption]
  Using just the E2 Emulator you can measure current consumption and detect abnormal current flows.

- [OE (Quick and Effective tool)]
  Tools suitable for a variety of applications

- [Middleware]
  Support for communication environments, security, image processing, and signal processing

- [QE for Capacitive Touch]
  Supports embedded systems employing capacitive touch sensors. Easily implement touch and slider operations in applications.
RX FAMILY DEVELOPMENT TOOLS

Software and Support Tools You Can Use Immediately with the RX Family

Available software packages include board-specific programs, peripheral function drivers, middleware, and documents and application examples illustrating usage procedures. Users can also use Smart Configurator to easily incorporate the above Renesas software components into their own projects, automatically generate I/O drivers for MCU peripheral functions, and more. This makes it possible to boost the efficiency of the development process overall.

- Searching for Information in Sample Code or Manuals
  From within the integrated development environment you can search for and display sample code, middleware, and Renesas product information on the web, as well as downloading and installing sample code.

- Making Complex Pin Settings and Embedding Drivers
  You can add and verify middleware and drivers for USB, file system, and other functions from within the integrated development environment. You can also make complex and time-consuming pin settings from the built-in GUI, and when conflicts are detected you can resolve them with a single click.

RX Family Middleware Driver Package (RX Driver Package)

The RX Driver Package is a software package that enables use of basic functions such as MCU visualization, flash self-programming, timer control, UART communication, and A/D conversion, as well as applied functions such as USB and Ethernet.

- Makes it possible to start using RX MCU peripheral functions right away, greatly reducing the time customers must spend considering prototypes.
- Applications that make use of Firmware Integration Technology (FIT) can be reused on MCUs across the RX Family. This significantly reduces the software development cost burden for customers extending their product lines.

Convenient Development Support Tools

Plenty of Convenient Functions to Assist Application Development

QE Development Support Tools for Many Application Types

“Have you ever realized this application but it doesn’t work? What should I do?” Has this ever happened to you? QE development support tools add development knowhow (functionality) to applications within the integrated development environment, helping to minimize the application development workload.

QE for Motor Development Support Tool for Motor Applications

This development support tool assists with the development of embedded systems using motors by making it easy to configure motor-related middleware and driver settings and to perform motor tuning and analysis. It lets you efficiently configure motor-related middleware and driver settings while checking block diagrams representing hardware configurations. Also, Renesas Motor Workbench automates the process of configuring settings. Simply click a button to start motor tuning and analysis.

QE for OTA Development Support Tool for Cloud Applications

Using QE for OTA for embedded system development utilizing the image display functions of the RX Family’s graphic LCD controller (TFT LCD) greatly simplifies initial screen calibration of the display, reducing the time required for development.

QE for Display Development Support Tool for Display Applications

Using QE for Display for embedded system development utilizing the image display functions of the RX Family’s graphic LCD controller (TFT LCD) greatly simplifies initial screen calibration of the display, reducing the time required for development.

QE for Capacitive Touch Development Support Tool for Capacitive Touch Sensor Applications

Using QE for Capacitive Touch in the development of embedded systems that utilize the capacitive touch sensor functions of RX Family MCUs simplifies making initial touch interface settings and tuning sensitivity, reducing the time required for development.

QE for AFE Development Support Tool with Analog Frontend Support

This development support tool supports development of embedded systems implementing high-precision sensing for MCUs with an on-chip analog frontend (AFE). The tool lets you design and modify circuit diagrams of the AFE configuration. You can check A/D conversion results (waveforms and histograms) in the monitoring window without the need for an oscilloscope and make adjustments to analog signals.

QE for Capacitive Touch Development Support Tool for Capacitive Touch Sensor Applications

Using QE for Capacitive Touch in the development of embedded systems that utilize the capacitive touch sensor functions of RX Family MCUs simplifies making initial touch interface settings and tuning sensitivity, reducing the time required for development.

QE for OTA Development Support Tool for Cloud Applications

This development support tool lets you easily try out the over the air (OTA) functions of cloud services such as AWS and Azure. Simply follow the instructions in the workflow view to perform the steps from obtaining cloud-related information to OTA implementation, including cloud system registration, importing security information to the MCU, and tuning OTA functions.

QE for Motor Development Support Tool for Motor Applications

This development support tool assists with the development of embedded systems using motors by making it easy to configure motor-related middleware and driver settings and to perform motor tuning and analysis. It lets you efficiently configure motor-related middleware and driver settings while checking block diagrams representing hardware configurations. Also, Renesas Motor Workbench automates the process of configuring settings. Simply click a button to start motor tuning and analysis.

Winning Combinations (Reference Designs)

Speeding Up Application Design for Customers

More Than 600 Winning Combinations for a Variety of Applications

Renesas offers an array of total solutions combining microcontrollers with power ICs, analog ICs, and connectivity devices as “Winning Combinations.” By making use of these combinations you can speed up product development cycles and reduce the overall risk associated with bringing a new product to market. Renesas continues to make available new Winning Combinations, including many featuring RX Family MCUs, one after another.

In addition to RSSK and MCK board products offered as solutions for various applications, there are three categories of RX evaluation boards to meet different user requirements: Renesas starter kits, RX Family target boards, and EK kits. RX Family target boards are entry-level products intended for users getting started using RX MCUs. They are populated with an MCU and on-board debugging circuits only. Users can use sample code available free of charge on the Renesas website to evaluate RX MCUs easily and inexpensively. RX Family EK kits feature on-board standard connectors for ecosystems such as Arduino and Pmod. They can easily be combined with separately purchased expansion ecosystem boards to add functionality for sensors, wireless communication, LCD panels, and motors. This enables quick and wide-ranging prototyping for a wide variety of scenarios.

Renesas Ready Partner Network

Renesas’ extensive network of ecosystem of partner vendors offer software and hardware building blocks that you can start using with Renesas MCUs right away. The Renesas RX ecosystem makes it possible to accelerate development of IoT applications integrating core technologies related to security, safety, connectivity, HMI, and more. The network of partner vendors is growing constantly. Visit the Renesas website for detailed, up-to-date information.
RX Family Web Page

Links to reach the ecosystem such as development support information, video libraries, solutions, etc. are posted on the RX TOP page.

Example of product information for RX72M (176-pin), product No. R5F572MNHGFC#V0

This guide lists the values for individual product numbers. For information on the actual product lineup, refer to the relevant user’s manual.

Note: 1. This information is different for each RX group. Refer to the relevant user’s manual for details.
Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.

2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement on any claims involving patents, copyrights or any other intellectual property rights of Renesas Electronics or others.

3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.

4. You shall be solely responsible for determining whether licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.

5. You shall not alter, modify, copy, or otherwise overpower any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.

6. Renesas Electronics products are classified according to the following two quality grades: “Standard” and “High Quality”. The intended applications for each Renesas Electronics product depend on the product quality grade, as indicated below.

   - **“Standard”**: Computer equipment; office equipment; communications equipment; test and measurement equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
   - **“High Quality”**: Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

   Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (biochip system; counterfeit reproducet, nuclear power control systems; aircraft control systems; key plant systems; military equipment, etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user’s manual or other Renesas Electronics documentation.

   - No semiconductor product is absolutely secure. Notwithstanding any security measure or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall not be liable for any liability arising out of any vulnerability, hardware or software, including but not limited to any unauthorized access to or use of a Renesas Electronics product in a system that uses a Renesas Electronics product; RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE UN INFRINGING OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTELLIGENCE, HACKING, DAILY LOSS OR THEFT, OR OTHER SECURITY PRIEOTTION (“Vulnerability Issues”). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VIOLATION ISSUES FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR CONTROLLED SUBSTANCES, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE. RENESAS ELECTRONICS DISCLAIMS ANY AND ALL LIABILITY FOR DAMAGES OR LOSS ARISING FROM OR RELATED TO ANY VIOLATION ISSUES INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.

   - When using Renesas Electronics products, refer to the latest product information (data sheets, user’s manuals, application notes, etc.) and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to minimum and maximum operating conditions, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.

   - Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain time and malfunctions under certain conditions. Unless designated as a high-reliability product in a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics documentation, Renesas Electronics products are not subject to reliability analysis design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or damage to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fail-safe and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.

   - Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of such Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or loss occurring as a result of your noncompliance with applicable laws and regulations.

   - Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems that have the nature of military equipment; etc.). Renesas Electronics

   - It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.

   - This document shall not be reproduced, republished or distributed in any form, whole or in part, without prior written consent from Renesas Electronics.

   - Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

   (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes any directly or indirectly controlled subsidiaries.

   (Note 2) "Renesas Electronics products" as used in this document means any product developed or manufactured by or for Renesas Electronics.
