DESCRIPTION:

The FCT162511T 16-bit registered/latched transceiver with parity is built using advanced dual metal CMOS technology. This high-speed, low-power transceiver combines D-type latches and D-type flip-flops to allow data flow in transparent, latched, or clocked modes. The device has a parity generator/checker in the A-to-B direction and a parity checker in the B-to-A direction. Error checking is done at the byte level with separate parity bits for each byte. Separate error flags exits for each direction with a single error flag indicating an error for either byte in the A-to-B direction and a second error flag indicating an error for either byte in the B-to-A direction. The parity error flags are open drain outputs which can be tied together and/or tied with flags from other devices to form a single error flag or interrupt. The parity error flags are enabled by the $\overline{OE_{Ex}}$ control pins allowing the designer to disable the error flag during combinational transitions.

The control pins LEAB, CLKAB, and \overline{OEAB} control operation in the A-to-B direction while LEBA, CLKBA, and \overline{OEBA} control the B-to-A direction. $\overline{GEN/CHK}$ is only for the selection of A-to-B operation. The B-to-A direction is always in checking mode. The $ODD/EVEN$ select is common between the two directions. Except for the $ODD/EVEN$ control, independent operation can be achieved between the two directions by using the corresponding control lines.

NOTES:

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

LEAB	A-to-B Latch Enable Input
LEBA	B-to-A Latch Enable Input
CLKAB	A-to-B Clock Input
CLKBA	B-to-A Clock Input
A _x	A-to-B Data Inputs or B-to-A 3-State Outputs
B _x	B-to-A Data Inputs or A-to-B 3-State Outputs
\overline{PERA}	Parity Error (Open Drain) on A Outputs

2. Output level before the indicated steady-state input conditions were established.
3. Output level before the indicated steady-state input conditions were established, provided that CLKAB was HIGH before LEAB went LOW.
4. H = HIGH Voltage Level
L = LOW Voltage Level

↑ = LOW-to-HIGH Transition

FUNCTION TABLE (PARITY CHECKING) (1, 2, 3, 4)

1, 3, 5, 7 or 9	L	L
1, 3, 5, 7 or 9	H	H ⁽⁶⁾
0, 2, 4, 6 or 8	L	H ⁽⁶⁾
0, 2, 4, 6 or 8	H	L

NOTES:

1. Conditions shown are for $\overline{GEN}/CHK = H$, $\overline{OEAB} = L$, $\overline{OEBA} = H$.
2. A-to-B parity checking is shown. B-to-A parity checking is similar but uses $\overline{OEBA} = L$, $\overline{OEAB} = H$ and errors will be indicated on \overline{PERA} .
3. In parity checking mode the parity bits will be transmitted unchanged along with the corresponding data regardless of parity errors (PB1 = PA1).
4. The response shown is for LEAB = H. If LEAB = L then CLKAB will control as an edge triggered clock.
5. Conditions shown are for the byte A0–A7 and PA1. The byte A8–A15 and PA2 is similar.
6. The parity error flag \overline{PERB} is a combined flag for both bytes A0–A7 and A8–A15. If a parity error occurs on either byte \overline{PERB} will go low. \overline{PERB} is an open drain output which must be externally pulled up to achieve a logic HIGH.

FUNCTION TABLE (PARITY GENERATION) (1, 2, 3, 4, 5)

0, 2, 4, 6 or 8	L	L
0, 2, 4, 6 or 8	H	H

NOTES:

1. Conditions shown are for $\overline{GEN}/CHK = L$, $\overline{OEAB} = L$, $\overline{OEBA} = H$.
2. A-to-B parity checking is shown. B-to-A is capable of parity checking while A-to-B is performing generation. B-to-A will not generate parity.
3. The response shown is for LEAB = H. If LEAB = L then CLKAB will control as an edge triggered clock.
4. Conditions shown are for the byte A–A7. The byte A8–A15 is similar but will output the parity on PB2.
5. The error flag \overline{PERB} will remain in a high state during parity generation.
