### Description

The Intersil HCS573MS is a Radiation Hardened octal transparent three-state latch with an active low output enable. The HCS573MS utilizes advanced CMOS/SOS technology. The outputs are transparent to the inputs when the Latch Enable ( $\overline{LE}$ ) is HIGH. When the Latch Enable ( $\overline{LE}$ ) goes LOW, the data is latched. The Output Enable ( $\overline{OE}$ ) controls the tri-state outputs. When the Output Enable ( $\overline{OE}$ ) is HIGH, the outputs are in the high impedance state. The latch operation is independent of the state of the Output Enable.

The HCS573MS utilizes advanced CMOS/SOS technology to achieve high-speed operation. This device is a member of radiation hardened, high-speed, CMOS/SOS Logic Family.

The HCS573MS is supplied in a 20 lead Ceramic flatpack (K suffix) or a SBDIP Package (D suffix).
