

### Description

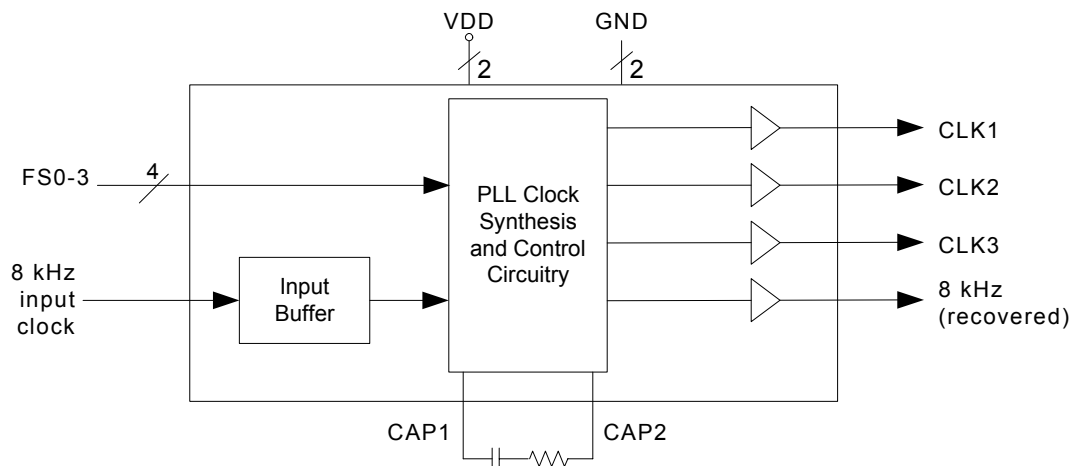

The MK1574-01A/B are Phase-Locked Loop (PLL) based clock synthesizers, which accept an 8 kHz clock input as a reference, and generate many popular communications frequencies. All outputs are frequency locked together and to the input. This allows for the generation of locked clocks to the 8 kHz backplane clock, simplifying clock generation and distribution in communications systems.

1) MK1574-01A — 5 V operation

2) MK1574-01B — 3.3 V operation

IDT manufactures the largest variety of clock generators and buffers, and can customize this device for a variety of frequencies.

### Block Diagram

### Features

- Packaged in 16-pin SOIC
- Accepts 8 kHz input clock
- Output clock rates include T1, E1, T2, E2
- Available in commercial (0° to + 70°C) or industrial (-40 to +85°C) temperature ranges
- For jitter attenuation, use the MK2049

## Pin Assignment

0 = connect directly to ground, 1 = connect directly to VDD.

## Pin Descriptions

| Pin Number | Pin Name | Pin Type | Pin Description   |
|------------|----------|----------|---|
| 1          | ICLK     | Input    | Clock input. Connect to an 8 kHz clock input.   |
| 2          | VDD      | Power    | Connect to 3.3 V for 1574-01B, Connect to 5 V for 1574-01A.   |
| 3          | VDD      | Power    | Connect to 3.3 V for 1574-01B, Connect to 5 V for 1574-01A.   |
| 4          | CAP1     | Input    | Connect to a ceramic capacitor and a resistor in series between this pin and CAP2. Refer to the section “Loop Bandwidth and Loop Filter Component Selection”. |
| 5          | GND      | Power    | Connect to ground.  |
| 6          | CAP2     | Power    | Connect to a ceramic capacitor and a resistor in series between this pin and CAP1. Refer to the section “Loop Bandwidth and Loop Filter Component Selection”. |
| 7          | GND      | Power    | Connect to ground.  |
| 8          | FS0      | Input    | Frequency select 0. Determines CLK outputs per table above.   |
| 9          | 8KOUT    | Output   | Recovered 8 kHz output clock. Can be low jitter, better duty cycle than clock input.  |
| 10         | CLK1     | Output   | Clock 1 determined by status of FS3:0 per table above.  |
| 11         | CLK2     | Output   | Clock 2 determined by status of FS3:0 per table above.  |
| 12         | CLK3     | Output   | Clock 3 determined by status of FS3:0 per table above.  |
| 13         | FS1      | Input    | Frequency select 1. Determines CLK outputs per table above.   |
| 14         | FS2      | Input    | Frequency select 2. Determines CLK outputs per table above.   |
| 15         | NC       | —        | No connect. Do not connect anything to this pin.  |
| 16         | FS3      | Input    | Frequency select 3. Determines CLK outputs per table above.   |

## External Components

The MK1574-01A/B requires a minimum number of external components for proper operation. An RC network (see the section “Loop Bandwidth and Loop Filter Component Selection”) should be connected between CAP1 and CAP2 as close to the device as possible. Decoupling capacitors of 0.01μF should be connected between VDD and GND on pins 2, 3, 5 and 7, as close to the device as possible. A series termination resistor of 33Ω may be used close to each clock output pin to reduce reflections.

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the MK1574-01A/B. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

| Item                                       | Rating              |
|--|---------------------|
| Supply Voltage, VDD (referenced to GND)    | -0.5 V to 7 V       |
| All Inputs and Outputs                     | -0.5 V to VDD+0.5 V |
| Ambient Operating Temperature (commercial) | 0 to +70° C         |
| Ambient Operating Temperature (industrial) | -40 to +85° C       |
| Storage Temperature                        | -65 to +150° C      |
| Junction Temperature                       | 150° C              |
| Soldering Temperature                      | 260° C              |

## Recommended Operation Conditions

| Parameter   | Min.  | Typ. | Max. | Units |
|---|-------|------|------|-------|
| Ambient Operating Temperature (commercial)        | 0     |      | +70  | ° C   |
| Ambient Operating Temperature (industrial)        | -40   |      | +85  | ° C   |
| Power Supply Voltage (measured in respect to GND) | +3.13 |      | +5.5 | V     |

## DC Electrical Characteristics

| Absolute Clock Period Jitter                       |          |                     | 1    |          |      | ns    |
| Actual Mean Frequency Error Versus Target (note 1) |          | Any clock selection |      | 0        | 0    | ppm   |

Note 1: All multipliers as shown in the table on page two are exact, and are stored in ROM on the chip.

## Thermal Characteristics

| Parameter                              | Symbol        | Conditions     | Min. | Typ. | Max. | Units |
|--|---------------|----------------|------|------|------|-------|
| Thermal Resistance Junction to Ambient | $\theta_{JA}$ | Still air      |      | 120  |      | °C/W  |
|  | $\theta_{JA}$ | 1 m/s air flow |      | 115  |      | °C/W  |
|  | $\theta_{JA}$ | 3 m/s air flow |      | 105  |      | °C/W  |
| Thermal Resistance Junction to Case    | $\theta_{JC}$ |                |      | 58   |      | °C/W  |

## Loop Bandwidth and Loop Filter Component Selection

The series-connected capacitor and resistor between CAP1 and CAP2 (pins 4 and 6) determine the dynamic characteristics of the phase-locked loop. The capacitor must have very low leakage, therefore a high quality ceramic capacitor is recommended. DO NOT use any type of polarized or electrolytic capacitor. The series connected capacitor and resistor between CAP1 and CAP2 (pins 4 and 6) determine the dynamic characteristics of the phase-locked loop. The capacitor must have very low leakage, therefore a high quality ceramic capacitor is recommended. DO NOT use any type of polarized or electrolytic capacitor. Ceramic capacitors should have C0G or NP0 dielectric. Avoid high-K dielectrics like Z5U and X7R; these and other ceramics which have piezoelectric properties allow mechanical vibration in the system to increase the output jitter because the mechanical energy is converted directly to voltage noise on the VCO input.

The values of the RC network determine the bandwidth of the PLL. The values of the loop filter components are calculated using the constants K1 and K2 from the Loop Filter Constants table (page 7). The loop bandwidth is set by the capacitor C and the constant K1 using the formula:

$$BW \text{ (Hz)} = \frac{K1}{\sqrt{C}} \quad \text{Equation 1}$$

The loop damping is set by the resistor R, the capacitor C, and the constant K2 using the formula::

$$R = \frac{\zeta * K2}{\sqrt{C}} \quad \text{Equation 2; } \zeta \text{ (zeta) is the damping factor}$$

For example, to design the loop filter whewn generating 8.192 MHz from 8 kHz:

1. From the Output Clock Decoding table (page 2), the address is E. The Loop Filter Constants table (page 7) shows the constants K1 = 0.0516 and K2 = 6.2.
2. A good value for the loop bandwidth is 1/20 the input frequency; where 8 kHz/20 = 400 Hz. Using equation 1,

$$400 = \frac{K1}{\sqrt{C}}$$

Therefore,

$$C = \left( \frac{0.0516}{400} \right)^2 = 16.6 \text{ nF (16 nF nearest standard value)}$$

3. A good value for the damping factor  $\zeta$  is 0.707. From equation 2,

$$R = \frac{0.707 * 6.2}{\sqrt{16E-9}} = 34.7 \text{ k}\Omega \text{ (36 k}\Omega \text{ nearest standard value)}$$

## Loop Filter Constants

This table shows the constants K1 and K2 that are used with the equations on page 6 to calculate the external loop filter components. Loop Filter Constants for MK1574-01A

| Decode | Address | Loop Filter Constants |          |
|--------|---------|-----------------------|----------|
| FS3:0  | (Hex)   | K1                    | K2       |
| 0000   | 0       | Reserved              | Reserved |
| 0001   | 1       | Reserved              | Reserved |
| 0010   | 2       | Reserved              | Reserved |
| 0011   | 3       | Reserved              | Reserved |
| 0100   | 4       | 0.0430                | 7.4      |
| 0101   | 5       | 0.0527                | 6.0      |
| 0110   | 6       | 0.0444                | 7.2      |

| 1000   | 8       | 0.0533                | 6.0      |
| 1001   | 9       | 0.0410                | 7.8      |
| 1010   | A       | 0.0508                | 6.3      |
| 1011   | B       | 0.0587                | 5.4      |
| 1100   | C       | 0.0365                | 8.7      |
| 1101   | D       | 0.0420                | 7.6      |
| 1110   | E       | 0.0516                | 6.2      |
| 1111   | F       | 0.0594                | 5.4      |

## PC Board Layout

A proper board layout is critical to the successful use of the MK1574-01A/B. In particular, the CAP1 and CAP2 pins are very sensitive to noise and leakage (CAP1 at pin 4 is the most sensitive). Traces must be as short as possible and the capacitor and resistor must be mounted next to the device as shown to the right. The capacitor connected between pins 3 and 5 is the power supply decoupling capacitor. The high frequency output clocks on may benefit from a series 33Ω resistor connected close to the pin (not shown).

## Clock Multipliers/Accuracies

In the table on page 2 are the actual multipliers stored in the MK1574-01A/B ROM, which yield the exact values shown for the output clocks.

## Package Outline and Package Dimensions (16-pin SOIC, 150 Mil. Narrow Body)

Package dimensions are kept current with JEDEC Publication No. 95

| Symbol   | Millimeters |       | Inches      |       |
|----------|-------------|-------|-------------|-------|

## Ordering Information

| Part / Order Number | Marking     | Shipping Packaging | Package     | Temperature   |
|---------------------|-------------|--------------------|-------------|---------------|
| MK1574-01ASLF       | 157401ASLF  | Tubes              | 16-pin SOIC | 0 to +70° C   |
| MK1574-01ASLFTR     | 157401ASLF  | Tape and Reel      | 16-pin SOIC | 0 to +70° C   |
| MK1574-01ASILF      | 157401ASILF | Tubes              | 16-pin SOIC | -40 to +85° C |
| MK1574-01ASILFTR    | 157401ASILF | Tape and Reel      | 16-pin SOIC | -40 to +85° C |
| MK1574-01BSLF       | 157401BSLF  | Tubes              | 16-pin SOIC | 0 to +70° C   |
| MK1574-01BSFLTR     | 157401BSLF  | Tape and Reel      | 16-pin SOIC | 0 to +70° C   |
| MK1574-01BSILF      | 157401BSILF | Tubes              | 16-pin SOIC | -40 to +85° C |
| MK1574-01BSILFTR    | 157401BSILF | Tape and Reel      | 16-pin SOIC | -40 to +85° C |

**“LF” designates the Pb-free configuration and RoHS compliant.**

While the information presented herein has been checked for both accuracy and reliability, IDT assumes no responsibility for either its use or for the infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial applications. Any other applications such as those requiring extended temperature range, high reliability, or other extraordinary environmental requirements are not recommended without additional processing by IDT. IDT reserves the right to change any circuitry or specifications without notice. IDT does not authorize or warrant any IDT product for use in life support devices or critical medical instruments.

## IMPORTANT NOTICE AND DISCLAIMER

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES ("RENESAS") PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD-PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for developers who are designing with Renesas products. You are solely responsible for (1) selecting the appropriate products for your application, (2) designing, validating, and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. Renesas grants you permission to use these resources only to develop an application that uses Renesas products. Other reproduction or use of these resources is strictly prohibited. No license is granted to any other Renesas intellectual property or to any third-party intellectual property. Renesas disclaims responsibility for, and you will fully indemnify Renesas and its representatives against, any claims, damages, costs, losses, or liabilities arising from your use of these resources. Renesas' products are provided only subject to Renesas' Terms and Conditions of Sale or other applicable terms agreed to in writing. No use of any Renesas resources expands or otherwise alters any applicable warranties or warranty disclaimers for these products.
