

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

4-BIT SINGLE-CHIP MICROCONTROLLER

The μ PD75P4308 replaces the μ PD754304's internal mask ROM with a one-time PROM and features expanded ROM capacity.

Because the μ PD75P4308 supports programming by users, it is suitable for use in prototype testing for system development using the μ PD754302 and 754304 products, and for use in small-lot production.

Detailed descriptions of functions are provided in the following document. Be sure to read the document before designing.

μ PD754304 User's Manual: U10123E

FEATURES

- Compatible with μ PD754304
- Memory capacity:
 - PROM : 8192 \times 8 bits
 - RAM : 256 \times 4 bits
- Can operate in the same power supply voltage as the mask version μ PD754304
 - V_{DD} = 1.8 to 5.5 V
- Adopts a compact shrink SOP package

ORDERING INFORMATION

	Part Number	Package
	μ PD75P4308GS	36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)
★	μ PD75P4308GS-A	36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)

Caution On-chip pull-up resistors by mask option are not provided.

Remark Products with "-A" at the end of the part number are lead-free products.

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.
 Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.

OVERVIEW OF FUNCTIONS

Item		Function	
Instruction execution time		<ul style="list-style-type: none"> • 0.95, 1.91, 3.81, or 15.3 μs (system clock: @ 4.19 MHz) • 0.67, 1.33, 2.67, or 10.7 μs (system clock: @ 6.0 MHz) 	
Internal memory	PROM	8192 \times 8 bits	
	RAM	256 \times 4 bits	
General-purpose register		<ul style="list-style-type: none"> • 4-bit manipulation: 8 registers \times 4 banks • 8-bit manipulation: 4 registers \times 8 banks 	
I/O ports	CMOS input	8	Connection of on-chip pull-up resistors can be specified by software: 7
	CMOS I/O	18	Connection of on-chip pull-up resistors can be specified by software: 18
	N-ch open-drain I/O	4	13-V withstand voltage
	Total	30	
Timers		3 channels <ul style="list-style-type: none"> • 8-bit timer/event counter: 2 channels (Can be used as a 16-bit timer/event counter) • 8-bit basic interval timer/watchdog timer: 1 channel 	
Serial interface		<ul style="list-style-type: none"> • 3-wire serial I/O mode ... MSB/LSB-first switchable • 2-wire serial I/O mode 	
Bit sequential buffer		16 bits	
Clock output (PCL)		<ul style="list-style-type: none"> • Φ, 524, 262, 65.5 kHz (system clock: @ 4.19 MHz) • Φ, 750, 375, 93.8 kHz (system clock: @ 6.0 MHz) 	
Vectored interrupts		External: 3, Internal: 4	
Test input		External: 1	
System clock oscillator		Ceramic/crystal oscillator	
Standby functions		STOP mode/HALT mode	
Operating ambient temperature		$T_A = -40$ to $+85^\circ\text{C}$	
Power supply voltage		$V_{DD} = 1.8$ to 5.5 V	
Package		36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)

3. PIN FUNCTIONS

3.1 Port Pins (1/2)

Pin name	I/O	Alternate function	Function	8-bit I/O	After reset	I/O Circuit type ^{Note 1}
P00	Input	INT4	4-bit input port (PORT0). For P01 to P03, connections of on-chip pull-up resistors are software-specifiable in 3-bit units.	No	Input	
P01	I/O	\overline{SCK}				<F>-A
P02	I/O	SO/SB0				<F>-B
P03	Input	SI				-C
P10	Input	INT0	4-bit input port (PORT1). Connections of on-chip pull-up resistors are software-specifiable in 4-bit units. Noise elimination circuit can be selected only for P10/INT0.	No	Input	-C
P11		INT1				
P12		INT2				
P13		TI0/TI1				
P20	I/O	PTO0	4-bit I/O port (PORT2). Connections of on-chip pull-up resistors are software-specifiable in 4-bit units.	No	Input	E-B
P21		PTO1				
P22		PCL				
P23		—				
P30	I/O	MD0	Programmable 4-bit I/O port (PORT3). Input and output can be specified in single-bit units. Connections of on-chip pull-up resistors are software-specifiable in 4-bit units.	No	Input	E-B
P31		MD1				
P32		MD2				
P33		MD3				
★ P50 ^{Note 2}	I/O	D4	N-ch open-drain 4-bit input/output port (PORT5). 13-V withstand during open-drain. Data input/output pin for program memory (PROM) write/verify (upper 4 bits).	No	High-impedance	M-E
P51 ^{Note 2}		D5				
P52 ^{Note 2}		D6				
P53 ^{Note 2}		D7				

Notes 1. Circuit types in brackets indicate Schmitt trigger input.

2. Low-level input leakage current increases when input instructions or bit manipulation instructions are executed.

3.1 Port Pins (2/2)

★

Pin name	I/O	Alternate function	Function	8-bit I/O	After reset	I/O Circuit type ^{Note}
P60	I/O	KR0/D0	Programmable 4-bit I/O port (PORT6). Input and output can be specified in single-bit units. Connections of on-chip pull-up resistors are software-specifiable in 4-bit units. Data input/output pin for program memory (PROM) write/verify (lower 4 bits).	Yes	Input	<F>-A
P61		KR1/D1				
P62		KR2/D2				
P63		KR3/D3				
P70	I/O	KR4	4-bit I/O port (PORT7). Connections of on-chip pull-up resistors are software-specifiable in 4-bit units.		Input	<F>-A
P71		KR5				
P72		KR6				
P73		KR7				
P80	I/O	—	2-bit I/O port (PORT8). Connections of on-chip pull-up resistors are software-specifiable in 2-bit units.	No	Input	E-B
P81		—				

Note Circuit types in brackets indicate the Schmitt trigger input.

3.2 Non-port Pins

Pin name	I/O	Alternate function	Function		After reset	I/O Circuit type ^{Note 1}
TI0/TI1	Input	P13	External event pulse input to timer/event counter		Input	-C
PTO0	Output	P20	Timer/event counter output		Input	E-B
PTO1		P21				
PCL		P22	Clock output			
$\overline{\text{SCK}}$	I/O	P01	Serial clock I/O		Input	<F>-A
SO/SB0		P02	Serial data output Serial data bus I/O			<F>-B
SI		P03	Serial data input			-C
INT4	Input	P00	Edge-triggered vectored interrupt input (triggered by both rising and falling edges).		—	
INT0		P10	Edge-triggered vectored interrupt input (detected edge is selectable). Noise elimination circuit selectable in INT0/P10.	Noise elimination circuit appended/asynchronous selectable	—	-C
INT1		P11		Asynchronous		
INT2		P12	Rising edge-triggered test input	Asynchronous		
KR0 to KR3	Input	P60/D0 to P63/D3	Falling edge-triggered testable input			
KR4 to KR7		P70 to P73				
X1	Input	—	Ceramic/crystal connection for system clock oscillation. If using an external clock, input it to X1 and input the inverted clock to X2.		—	—
X2	—	—				
$\overline{\text{RESET}}$	Input	—	System reset input		—	
MD0 to MD3	Input	P30 to P33	Mode selection for program memory (PROM) write/verify.		Input	E-B
★ D0 to D3	I/O	P60/KR0 to P63/KR3	Data bus pin for program memory (PROM) write/verify.		Input	<F>-A
★ D4 to D7		P50 to P53				M-E
V _{PP} ^{Note 2}	—	—	Program supply voltage in program memory (PROM) write/verify mode. In normal operation mode, connect directly to V _{DD} . Apply +12.5 V in PROM write/verify mode.		—	—
V _{DD}	—	—	Positive power supply		—	—
V _{SS}	—	—	Ground		—	—

Notes 1. Circuit types in brackets indicate Schmitt trigger input.

2. During normal operation, the V_{PP} pin will not operate normally unless connected to V_{DD} pin.

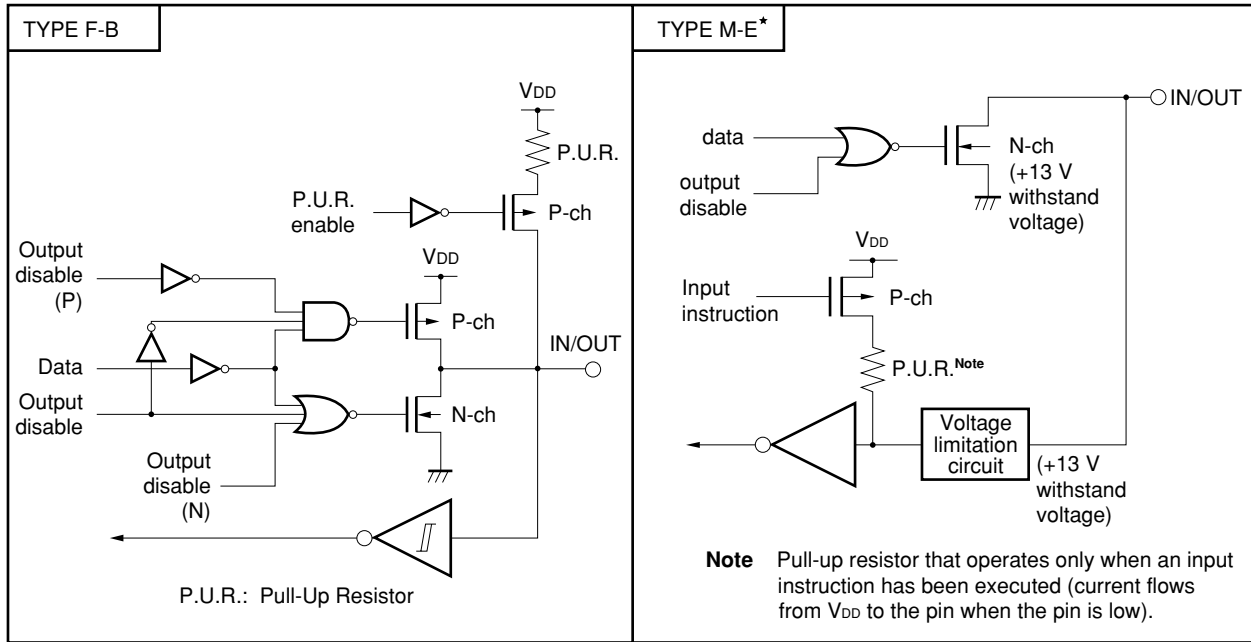

3.3 Pin I/O Circuits

The equivalent circuits for the μPD75P4308's pin are shown in simplified schematic diagrams below.

(1/2)

(2/2)

★ 3.4 Recommended Connection of Unused Pins

Pin	Recommended connection
P00/INT4	Connect to Vss or VDD.
P01/ $\overline{\text{SCK}}$	Connect individually to Vss or VDD via a resistor.
P02/SO/SB0	
P03/SI	Connect to Vss.
P10/INT0 to P12/INT2	Connect to Vss or VDD.
P13/TI0/TI1	
P20/PTO0	Input mode : connect individually to Vss or VDD via a resistor. Output mode: open
P21/PTO1	
P22/PCL	
P23	
P30/MD0 to P33/MD3	
P50 to P53	Connect to Vss.
P60/KR0 to P63/KR3	Input mode : connect individually to Vss or VDD via a resistor.
P70/KR4 to P73/KR7	
P80, P81	Output mode: open
VPP	Be sure to connect directly to VDD.

4. SWITCHING FUNCTION BETWEEN Mk I MODE AND Mk II MODE

Setting a stack bank selection (SBS) register for the μPD75P4308 enables the program memory to be switched between the Mk I mode and the Mk II mode. This capability enables the evaluation of the μPD754302 or 754304 using the μPD75P4308.

When the SBS bit 3 is set to 1: sets Mk I mode (corresponds to Mk I mode of μPD754302 and 754304)

When the SBS bit 3 is set to 0: sets Mk II mode (corresponds to Mk II mode of μPD754302 and 754304)

4.1 Differences between Mk I Mode and Mk II Mode

Table 4-1 lists the differences between the Mk I mode and the Mk II mode of the μPD75P4308.

Table 4-1. Differences between Mk I Mode and Mk II Mode

Item		Mk I Mode	Mk II Mode
Program counter		PC ₁₂₋₀	
Program memory (bytes)		8192	
Data memory (bits)		256 × 4	
Stack	Stack bank	Memory bank 0	
	Stack bytes	2 bytes	3 bytes
Instruction	BRA !addr1 CALLA !addr1	Not provided	Provided
	CALL !addr	3 machine cycles	4 machine cycles
Instruction execution time	CALLF !faddr	2 machine cycles	3 machine cycles
	Supported mask ROM versions	Mk I mode of μPD754302 and 754304	Mk II mode of μPD754302 and 754304

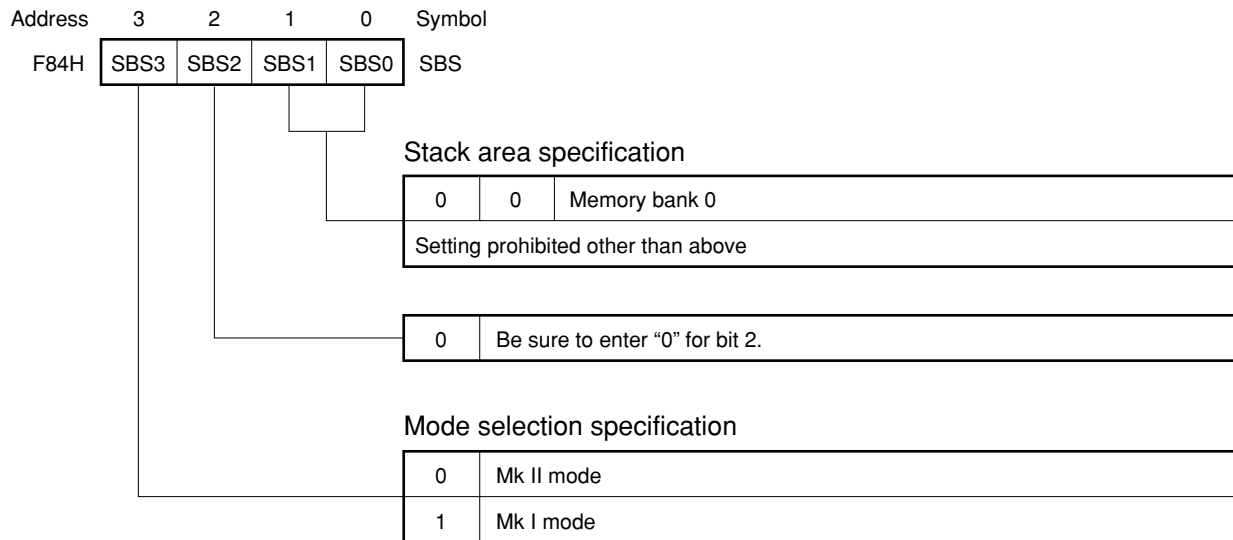

- ★ **Caution** The Mk II mode supports 16 Kbytes or more of program area in the 75X and 75XL Series. This mode allows the software compatibility with 16-Kbyte or more versions to be improved. Compared with the Mk I mode, selecting the Mk II mode increases the stack bytes by one during execution of the subroutine call instruction. When a CALL !addr or CALLF !faddr instruction is used, the instruction execution time increases by one machine cycle. Therefore, if RAM efficiency or throughput is more important than software compatibility, use the Mk I mode.

4.2 Setting of Stack Bank Selection (SBS) Register

Use the stack bank selection register to switch between the Mk I mode and the Mk II mode. Figure 4-1 shows the format for doing this.

The stack bank selection register is set using a 4-bit memory manipulation instruction. When using the Mk I mode, be sure to initialize the stack bank selection register to 1000B at the beginning of the program. When using the Mk II mode, be sure to initialize it to 0000B.

Figure 4-1. Format of Stack Bank Selection Register

- Cautions**
1. SBS3 is set to "1" after $\overline{\text{RESET}}$ input, and consequently the CPU operates in the Mk I mode. When using instructions for the Mk II mode, set SBS3 to "0" to enter the Mk II mode before using the instructions.
 2. When using the Mk II mode, execute a subroutine call instruction and an interrupt instruction after $\overline{\text{RESET}}$ input and after setting the stack bank selection register.

5. DIFFERENCES BETWEEN μPD75P4308 AND μPD754302, 754304

The μPD75P4308 replaces the internal mask ROM in the μPD754302 and 754304 with a one-time PROM and features expanded ROM capacity. The μPD75P4308's Mk I mode supports the Mk I mode in the μPD754302 and 754304 and the μPD75P4308's Mk II mode supports the Mk II mode in the μPD754302 and 754304.

Table 5-1 lists differences among the μPD75P4308 and the μPD754302 and 754304. Be sure to check the differences between corresponding versions beforehand, especially when a PROM version is used for debugging or prototype testing of application systems and later the corresponding mask ROM version is used for full-scale production.

For details of CPU functions and incorporated hardware, refer to μPD754304 User's Manual (U10123E).

Table 5-1. Differences between μPD75P4308 and μPD754302, 754304

Item		μPD754302	μPD754304	μPD75P4308
Program counter		11-bit	12-bit	13-bit
Program memory (bytes)		Mask ROM 2048	Mask ROM 4096	One-time PROM 8192
Data memory (× 4 bits)		256		
Mask options	Pull-up resistor for PORT5	Yes (On-chip/not on-chip specifiable)		No (On-chip not possible)
	Wait time in $\overline{\text{RESET}}$ state	Yes (Selectable from $2^{17}/f_x$ and $2^{15}/f_x$) ^{Note}		No (fixed at $2^{15}/f_x$) ^{Note}
★ ★ Pin configuration	Pins 5 to 8	P33-P30		P33/MD3-P30/MD0
	Pin 19	IC		V _{PP}
	Pins 29 to 32	P63/KR3-P60/KR0		P63/KR3/D3-P60/KR0/D0
	Pins 33 to 36	P53-P50		P53/D7-P50/D4
Other		Noise resistance and noise radiation may differ due to the different circuit complexities and mask layouts.		

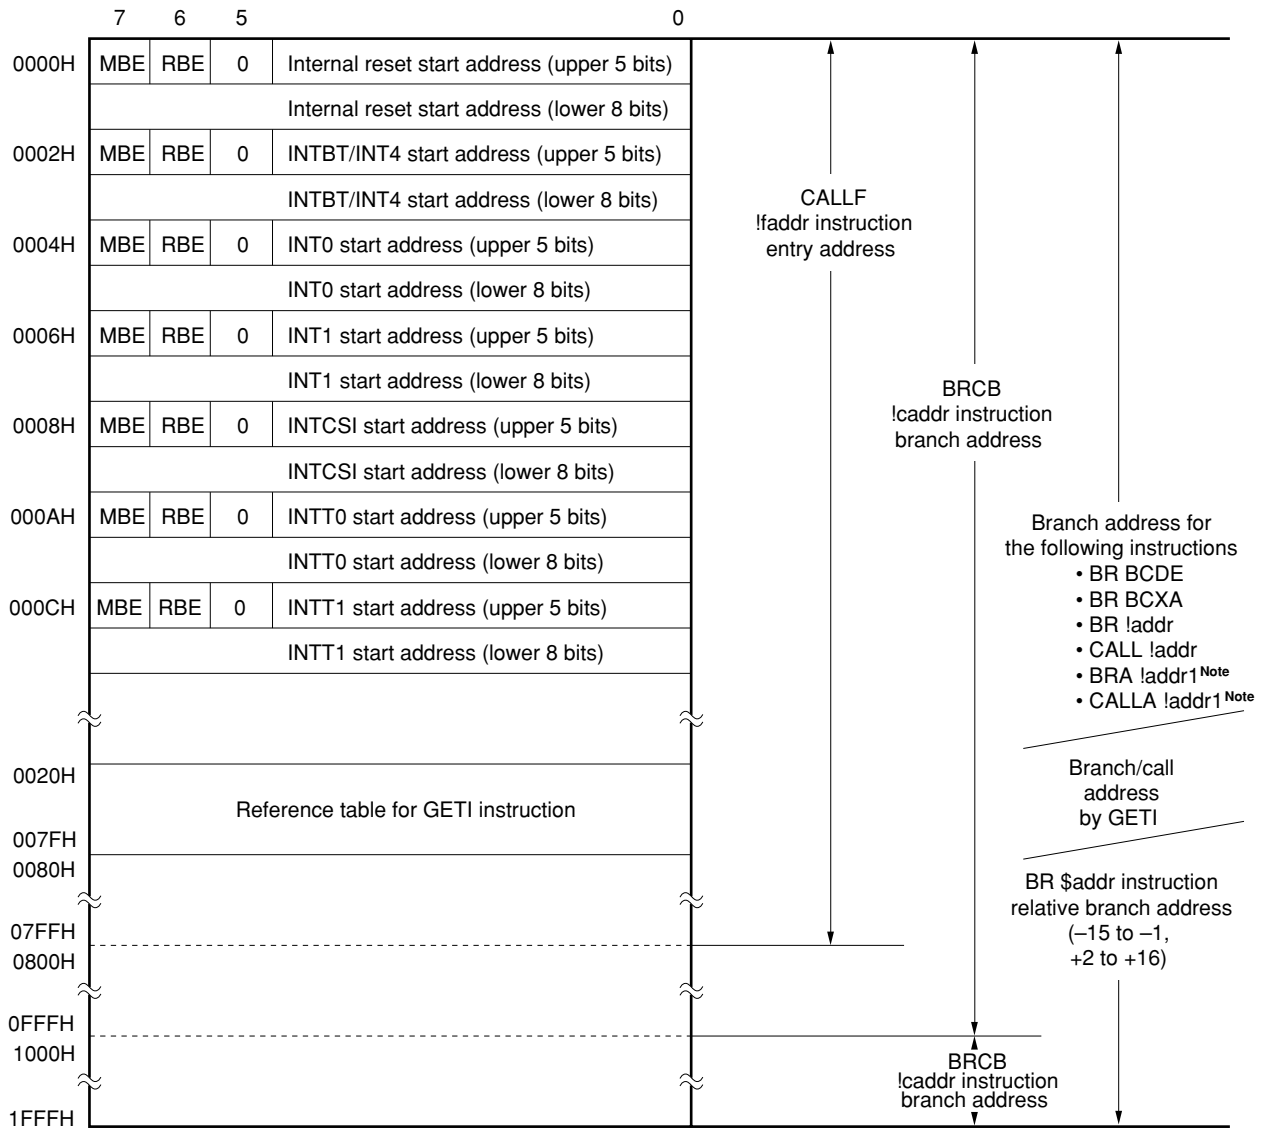

Note $2^{17}/f_x$: 21.8 ms @6.0-MHz operation, 31.3 ms @4.19-MHz operation.

$2^{15}/f_x$: 5.46 ms @6.0-MHz operation, 7.81 ms @4.19-MHz operation.

Caution Noise resistance and noise radiation are different in PROM version and mask ROM versions. If using a mask ROM version instead of the PROM version for processes between prototype development and full production, be sure to fully evaluate the CS (not ES) of the mask ROM version.

6. MEMORY CONFIGURATION

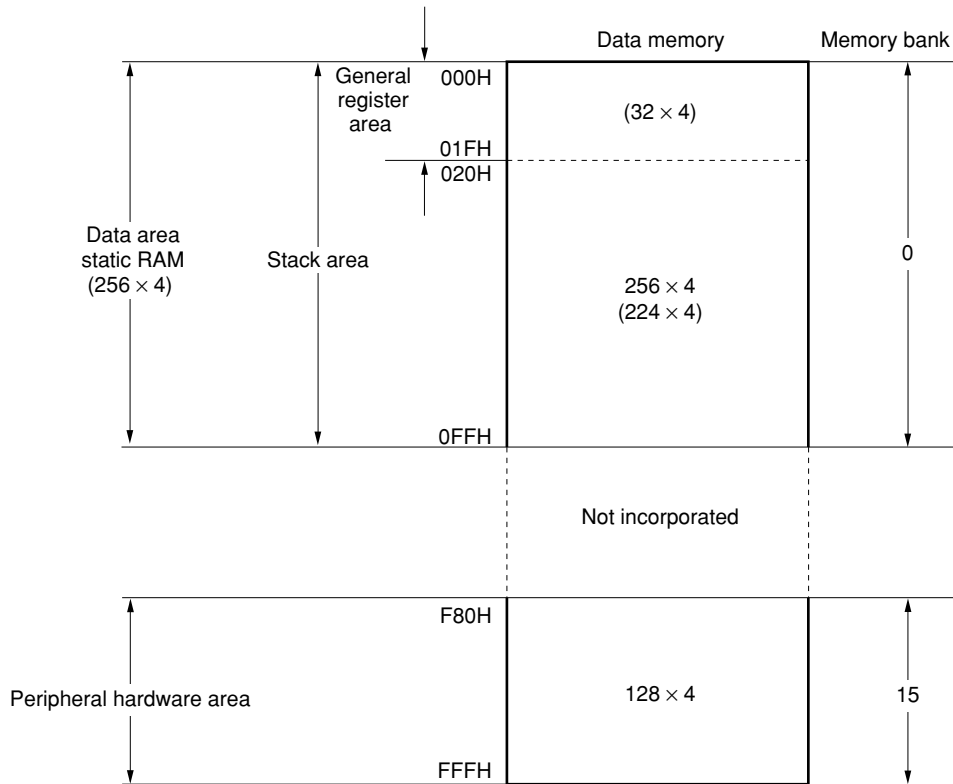

Figure 6-1. Program Memory Map

Note Can be used only in the Mk II mode.

Remark For instructions other than those noted above, the “BR PCDE” and “BR PCXA” instructions can be used to branch to addresses with changes in the PC’s lower 8 bits only.

Figure 6-2. Data Memory Map

7. INSTRUCTION SET

(1) Representation and coding formats for operands

In the instruction's operand area, use the following coding format to describe operands corresponding to the instruction's operand representations (for further description, refer to **RA75X Assembler Package User's Manual Language (EEU-1363)**). When there are several codes, select and use just one. Uppercase letters, and + and – symbols are key words that should be entered as they are.

For immediate data, enter an appropriate numerical value or label.

Instead of mem, fmem, pmem, bit, etc., a register flag symbol can be described as a label descriptor (for details, refer to **μPD754304 User's Manual (U10123E)**). Labels that can be entered for fmem and pmem are restricted.

Representation	Coding format
reg reg1	X, A, B, C, D, E, H, L X, B, C, D, E, H, L
rp rp1 rp2 rp' rp'1	XA, BC, DE, HL BC, DE, HL BC, DE XA, BC, DE, HL, XA', BC', DE', HL' BC, DE, HL, XA', BC', DE', HL'
rpa rpa1	HL, HL+, HL–, DE, DL DE, DL
n4 n8	4-bit immediate data or label 8-bit immediate data or label
mem bit	8-bit immediate data or label ^{Note} 2-bit immediate data or label
fmem pmem	FB0H-FBFH, FF0H-FFFH immediate data or label FC0H-FFFH immediate data or label
addr addr1	0000H-1FFFH immediate data or label 0000H-1FFFH immediate data or label (in Mk II mode only)
caddr faddr taddr	12-bit immediate data or label 11-bit immediate data or label 20H-7FH immediate data (however, bit0 = 0) or label
PORTn IExxx RBn MBn	PORT0-PORT3, PORT5-PORT8 IEBT, IECSt, IET0, IET1, IE0-IE2, IE4 RB0-RB3 MB0, MB15

Note When processing 8-bit data, only even addresses can be specified.

(2) Operation legend

A	: A register; 4-bit accumulator
B	: B register
C	: C register
D	: D register
E	: E register
H	: H register
L	: L register
X	: X register
XA	: Register pair (XA); 8-bit accumulator
BC	: Register pair (BC)
DE	: Register pair (DE)
HL	: Register pair (HL)
XA'	: Expansion register pair (XA')
BC'	: Expansion register pair (BC')
DE'	: Expansion register pair (DE')
HL'	: Expansion register pair (HL')
PC	: Program counter
SP	: Stack pointer
CY	: Carry flag; bit accumulator
PSW	: Program status word
MBE	: Memory bank enable flag
RBE	: Register bank enable flag
PORT _n	: Port n (n = 0 to 3, 5 to 8)
IME	: Interrupt master enable flag
IPS	: Interrupt priority select register
IE _{xxx}	: Interrupt enable flag
RBS	: Register bank select register
MBS	: Memory bank select register
PCC	: Processor clock control register
.	: Delimiter for address and bit
(xx)	: Contents of address xx
xxH	: Hexadecimal data

(3) Description of symbols used in addressing area

*1	MB = MBE·MBS (MBS = 0, 15)	<p>Data memory addressing</p>
*2	MB = 0	
*3	MBE = 0 : MB = 0 (000H-07FH) MB = 15 (F80H-FFFH) MBE = 1 : MB = MBS (MBS = 0, 15)	
*4	MB = 15, fmem = FB0H-FBFH, FF0H-FFFH	
*5	MB = 15, pmem = FC0H-FFFH	
*6	addr, addr1 = 0000H-1FFFH	<p>Program memory addressing</p>
*7	addr, addr1 = (Current PC) -15 to (Current PC) -1 (Current PC) +2 to (Current PC) +16	
*8	caddr = 0000H-0FFFH (PC ₁₂ = 0) or 1000H-1FFFH (PC ₁₂ = 1)	
*9	faddr = 0000H-07FFH	
*10	taddr = 0020H-007FH	
*11	addr1 = 0000H-1FFFH (Mk II mode only)	

- Remarks**
1. MB indicates access-enabled memory banks.
 2. In area *2, MB = 0 for both MBE and MBS.
 3. In areas *4 and *5, MB = 15 for both MBE and MBS.
 4. Areas *6 to *11 indicate corresponding address-enabled areas.

(4) Description of machine cycles

S indicates the number of machine cycles required for skipping of skip-specified instructions. The value of S varies as shown below.

- No skip S = 0
- Skipped instruction is 1-byte or 2-byte instruction S = 1
- Skipped instruction is 3-byte instruction^{Note} S = 2

Note 3-byte instructions: BR !addr, BRA !addr1, CALL !addr, CALLA !addr1

Caution The GETI instruction is skipped for one machine cycle.

One machine cycle equals one cycle (= t_{CY}) of the CPU clock Φ . Use the PCC setting to select among four cycle times.

Group	Mnemonic	Operand	No. of bytes	Machine cycle	Operation	Addressing area	Skip condition
Transfer	MOV	A, #n4	1	1	$A \leftarrow n4$		String-effect A
		reg1, #n4	2	2	$reg1 \leftarrow n4$		
		XA, #n8	2	2	$XA \leftarrow n8$		String-effect A
		HL, #n8	2	2	$HL \leftarrow n8$		String-effect B
		rp2, #n8	2	2	$rp2 \leftarrow n8$		
		A, @HL	1	1	$A \leftarrow (HL)$	*1	
		A, @HL+	1	2 + S	$A \leftarrow (HL)$, then $L \leftarrow L + 1$	*1	L = 0
		A, @HL-	1	2 + S	$A \leftarrow (HL)$, then $L \leftarrow L - 1$	*1	L = FH
		A, @rpa1	1	1	$A \leftarrow (rpa1)$	*2	
		XA, @HL	2	2	$XA \leftarrow (HL)$	*1	
		@HL, A	1	1	$(HL) \leftarrow A$	*1	
		@HL, XA	2	2	$(HL) \leftarrow XA$	*1	
		A, mem	2	2	$A \leftarrow (mem)$	*3	
		XA, mem	2	2	$XA \leftarrow (mem)$	*3

					• When using instruction other than TBR or TCALL Execute (taddr) (taddr + 1) instructions		
			1	4	• When using TBR instruction $PC_{12-0} \leftarrow (taddr)_{4-0} + (taddr + 1)$	*10	Determined by referenced instruction
4	• When using TCALL instruction $(SP - 5) \leftarrow 0, 0, 0, PC_{12}$ $(SP - 6) (SP - 3) (SP - 4) \leftarrow PC_{11-0}$ $(SP - 2) \leftarrow x, x, MBE, RBE$ $PC_{12-0} \leftarrow (taddr)_{4-0} + (taddr + 1)$ $SP \leftarrow SP - 6$						
3	3	• When using instruction other than TBR or TCALL Execute (taddr) (taddr + 1) instructions		Determined by referenced instruction			

- Notes**
- Before executing the IN or OUT instruction, set MBE to 0 or 1 and set MBS to 15.
 - TBR and TCALL are assembler pseudo-instructions for the GETI instruction's table definitions.
 - Shaded areas indicate support for the Mk II mode only. Other areas indicate support for the Mk I mode only.

8. ONE-TIME PROM (PROGRAM MEMORY) WRITE AND VERIFY

The program memory in the μPD75P4308 is a 8192 × 8-bit electrically write-enabled one-time PROM. The pins listed in the table below are used for this one-time PROM's write/verify operations. Clock input from the X1 pin is used instead of address input as a method for updating addresses.

Pin name	Function
V _{PP}	Pin (usually V _{DD}) where programming voltage is applied during program memory write/verify
X1, X2	Clock input pin for address updating during program memory write/verify. Input the X1 pin's inverted signal to the X2 pin.
MD0-MD3	Operation mode selection pin for program memory write/verify
D0/P60/KR0-D3/P63/KR3 (lower 4) D4/P50-D7/P53 (upper 4)	8-bit data I/O pin for program memory write/verify
V _{DD}	Pin where power supply voltage is applied. Power voltage range for normal operation is 1.8 to 5.5 V. Apply 6.0 V for program memory write/verify.

Caution Pins not used for program memory write/verify connect to V_{SS} via a pull-down resistor.

8.1 Operation Modes for Program Memory Write/Verify

When +6 V is applied to the μPD75P4308's V_{DD} pin and +12.5 V is applied to its V_{PP} pin, program write/verify modes are in effect. Furthermore, the following detailed operation modes can be specified by setting pins MD0 to MD3 as shown below.

Operation mode specification						Operation mode
V _{PP}	V _{DD}	MD0	MD1	MD2	MD3	
+12.5 V	+6 V	H	L	H	L	Zero-clear program memory address
		L	H	H	H	Write mode
		L	L	H	H	Verify mode
		H	×	H	H	Program inhibit mode

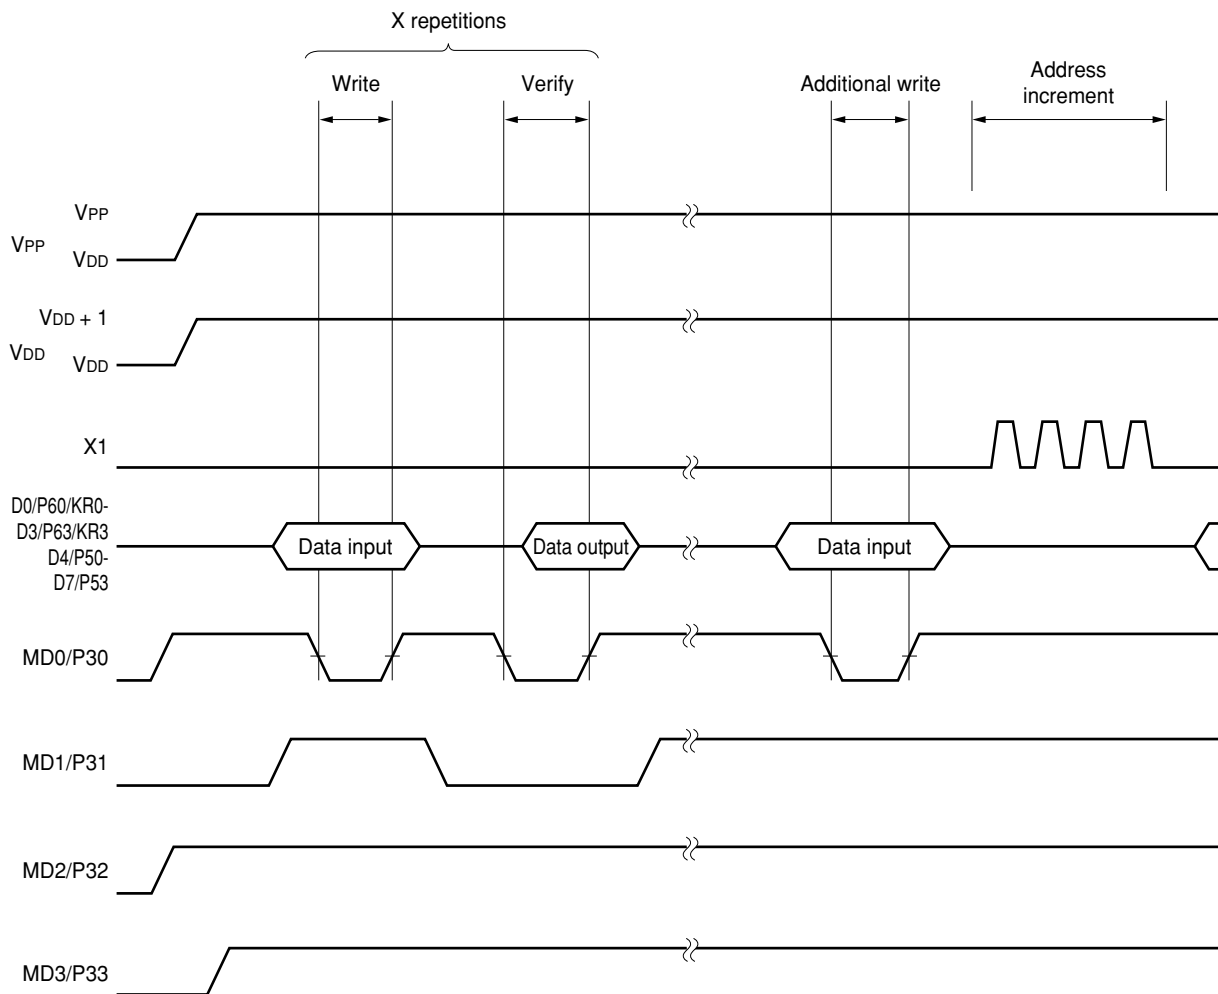

× : L or H

★ 8.2 Program Memory Write Procedure

High-speed program memory write can be executed via the following steps.

- (1) Pull down unused pins to V_{SS} via resistors. Set the X1 pin to low.
- (2) Apply +5 V to the V_{DD} and V_{PP} pins.
- (3) Wait 10 μs .
- (4) Zero-clear mode for program memory addresses.
- (5) Apply +6 V to V_{DD} and +12.5 V to V_{PP} .
- (6) Write data using 1-ms write mode.
- (7) Verify mode. If write is verified, go to step (8) and if write is not verified, go back to steps (6) and (7).
- (8) X [= number of write operations from steps (6) and (7)] \times 1 ms additional write
- (9) 4 pulse inputs to the X1 pin updates (increments +1) the program memory address.
- (10) Repeat steps (6) to (9) until the last address is completed.
- (11) Zero-clear mode for program memory addresses.
- (12) Apply +5 V to the V_{DD} and V_{PP} pins.
- (13) Power supply OFF

The following diagram illustrates steps (2) to (9).

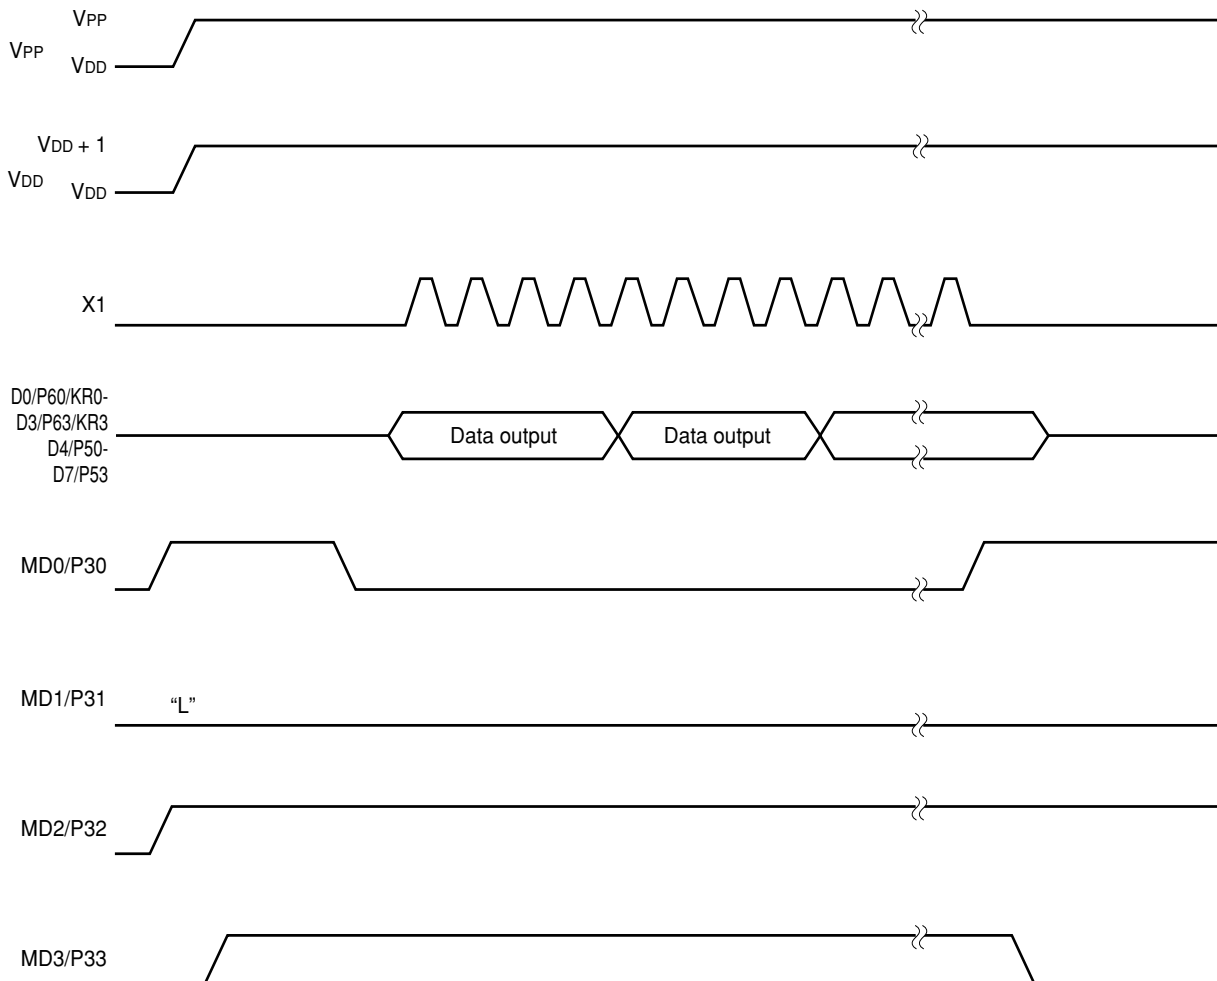

★ 8.3 Program Memory Read Procedure

The μPD75P4308 can read out the program memory contents via the following steps.

- (1) Pull down unused pins to V_{SS} via resistors. Set the X1 pin to low.
- (2) Apply +5 V to the V_{DD} and V_{PP} pins.
- (3) Wait 10 μs .
- (4) Zero-clear mode for program memory addresses.
- (5) Apply +6 V to V_{DD} and +12.5 V to V_{PP} .
- (6) Verify mode. When a clock pulse is input to the X1 pin, data is output sequentially to one address at a time based on a cycle of four pulse inputs.
- (7) Zero-clear mode for program memory addresses.
- (8) Apply +5 V to the V_{DD} and V_{PP} pins.
- (9) Power supply OFF

The following diagram illustrates steps (2) to (7).

8.4 One-Time PROM Screening

Due to its structure, the one-time PROM cannot be fully tested before shipment by NEC Electronics. Therefore, NEC Electronics recommends the screening process, that is, after the required data is written to the PROM and the PROM is stored under the high-temperature conditions shown below, the PROM should be verified.

Storage temperature	Storage time
125°C	24 hours

9. ELECTRICAL SPECIFICATIONS

Absolute Maximum Ratings (T_A = 25°C)

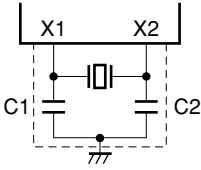

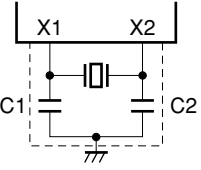

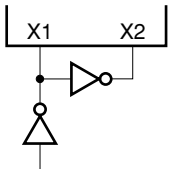

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage	V _{DD}		-0.3 to +7.0	V
PROM supply voltage	V _{PP}		-0.3 to +13.5	V
Input voltage	V _{I1}	Other than port 5	-0.3 to V _{DD} +0.3	V
	V _{I2}	Port 5 (N-ch open-drain)	-0.3 to +14	V
Output voltage	V _O		-0.3 to V _{DD} +0.3	V
High-level output current	I _{OH}	Per pin	-10	mA
		Total for all pins	-30	mA
Low-level output current	I _{OL}	Per pin	30	mA
		Total for all pins	220	mA
Operating ambient temperature	T _A		-40 to +85	°C
Storage temperature	T _{stg}		-65 to +150	°C

Caution If the absolute maximum ratings of even one of the parameters is exceeded even momentarily, the quality of the product may be degraded. The absolute maximum ratings are therefore values which, when exceeded, can cause the product to be damaged. Be sure that these values are never exceeded when using the product.

Capacitance (T_A = 25°C, V_{DD} = 0 V)

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Input capacitance	C _{IN}	f = 1 MHz Unmeasured pins returned to 0 V			15	pF
Output capacitance	C _{OUT}				15	pF
I/O capacitance	C _{IO}				15	pF

System Clock Oscillation Circuit Characteristics (T_A = -40 to +85°C, V_{DD} = 1.8 to 5.5 V)

Resonator	Recommended constants	Parameter	Conditions	MIN.	TYP.	MAX.	Unit
Ceramic resonator		Oscillation frequency (f _x) ^{Note 1}		1.0		6.0 ^{Note 3}	MHz
		Oscillation stabilization time ^{Note 2}	After V _{DD} has reached MIN. value of oscillation voltage range			4	ms
Crystal resonator		Oscillation frequency (f _x) ^{Note 1}		1.0		6.0 ^{Note 3}	MHz
		Oscillation stabilization time ^{Note 2}	V _{DD} = 5.0 V ± 10 %			10	ms
						30	ms
External clock		X1 input frequency (f _x) ^{Note 1}		1.0		6.0 ^{Note 3}	MHz
		X1 input high-, low-level widths (t _{xH} , t _{xL})		83.3		500	ns

- Notes 1.** The oscillation frequency and X1 input frequency shown above indicate characteristics of the oscillation circuit only. For the instruction execution time, refer to AC Characteristics.
- 2.** The oscillation stabilization time is necessary for oscillation to stabilize after applying V_{DD} or releasing the STOP mode.
- 3.** When the oscillation frequency f_x satisfies 4.19 MHz < f_x ≤ 6.0 MHz at 1.8 V ≤ V_{DD} < 2.7 V, do not set PCC = 0011 as an instruction execution time. If PCC = 0011 is selected, one machine cycle takes less than 0.95 μs, and the MIN. value rating of 0.95 μs is not satisfied.

Caution When using the system clock oscillation circuit, wire the portion enclosed in the dotted line in the above figure as follows to prevent adverse influence due to wiring capacitance:

- Keep the wiring length as short as possible.
- Do not cross the wiring with other signal lines.
- Do not route the wiring in the vicinity of a line through which a high alternating current flows.
- Always keep the ground point of the capacitor of the oscillation circuit at the same potential as V_{SS}. Do not ground to a ground pattern through which a high current flows.
- Do not extract signals from the oscillation circuit.

Recommended Oscillation Circuit Constant

Ceramic Resonator (T_A = -40 to +85 °C)

Caution The oscillation circuit constants and oscillation voltage range indicate conditions for stable oscillation but do not guarantee accuracy of the oscillation frequency. If the application circuit requires accuracy of the oscillation frequency, it is necessary to set the oscillation frequency of the resonator in the application circuit. For this, it is necessary to directly contact the manufacturer of the resonator being used.

Note When using a CSB1000J (1.0 MHz) of Murata Manufacturing Co., Ltd. as a ceramic resonator, a limiting resistor ($R_d = 5.6\text{ k}\Omega$) is necessary (See diagram below). When using any other recommended resistor, it is not necessary.

DC Characteristics (T_A = -40 to +85°C, V_{DD} = 1.8 to 5.5 V)

Parameter	Symbol	Conditions		MIN.	TYP.	MAX.	Unit
Low-level output current	I _{OL}	Per pin				15	mA
		Total for all pins				150	mA
High-level input voltage	V _{IH1}	Ports 2, 3, 8	2.7 V ≤ V _{DD} ≤ 5.5 V	0.7 V _{DD}		V _{DD}	V

12. RECOMMENDED SOLDERING CONDITIONS

The μPD75P4308 should be soldered and mounted under the following recommended conditions. For technical information, see the following website.

Semiconductor Device Mount Manual (<http://www.necel.com/pkg/en/mount/index.html>)

Table 12-1. Surface Mounting Type Soldering Conditions

(1) μPD75P4308GS: 36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 235°C, Time: 30 seconds max. (at 210°C or higher), Count: Twice or less, Exposure limit: 7 days ^{Note} (after that, prebake at 125°C for 10 to 72 hours)	IR35-107-2
VPS	Package peak temperature: 215°C, Time: 40 seconds max. (at 200°C or higher), Count: Twice or less, Exposure limit: 7 days ^{Note} (after that, prebake at 125°C for 10 to 72 hours)	VP15-107-2
Wave soldering	Solder bath temperature: 260°C max., Time: 10 seconds max., Count: Once Preheating temperature: 120°C max. (package surface temperature) Exposure limit: 7 days ^{Note} (after that, prebake at 125°C for 10 to 72 hours)	WS60-107-1
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	—

Note After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

Caution Do not use different soldering methods together (except for partial heating).

Remark For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

★ **(2) μPD75P4308GS-A: 36-pin plastic shrink SOP (300 mil, 0.8 mm pitch)**

Soldering Method	Soldering Conditions	Recommended Condition Symbol
Infrared reflow	Package peak temperature: 260°C, Time: 60 seconds max. (at 220°C or higher), Count: Three times or less, Exposure limit: 7 days ^{Note} (after that, prebake at 125°C for 20 to 72 hours)	IR60-207-3
Wave soldering	For details, contact an NEC Electronics sales representative.	—
Partial heating	Pin temperature: 350°C max., Time: 3 seconds max. (per pin row)	—

Note After opening the dry pack, store it at 25°C or less and 65% RH or less for the allowable storage period.

Caution Do not use different soldering methods together (except for partial heating).

Remarks

- Products with “-A” at the end of the part number are lead-free products.
- For soldering methods and conditions other than those recommended above, contact an NEC Electronics sales representative.

APPENDIX A. COMPARISON OF μPD750004, 754304, AND 75P4308 FUNCTIONS

	Total	34	30 (No port 4 pin)	
Timers		4 channels <ul style="list-style-type: none"> • Basic interval timer/watchdog timer • 8-bit timer/event counter • 8-bit timer • Watch timer 	3 channels <ul style="list-style-type: none"> • Basic interval timer/watchdog timer • 8-bit timer/event counter 0 (fx/2² added) • 8-bit timer/event counter 1 (TI1, fx/2² added) (Can be used as a 16-bit timer/event counter) 	
Clock output (PCL)		<ul style="list-style-type: none"> • Φ, 524, 262, 65.5 kHz (main system clock: @ 4.19 MHz) • Φ, 750, 375, 93.8 kHz (main system clock: @ 6.0 MHz) 		
BUZ output		Yes	No	
Serial interface		Can support three modes <ul style="list-style-type: none"> • 3-wire serial I/O mode ...MSB/LSB-first switchable • 2-wire serial I/O mode • SBI mode 	Can support two modes <ul style="list-style-type: none"> • 3-wire serial I/O mode...MSB/LSB-first switchable • 2-wire serial I/O mode 	
Watch mode register (WM)		Yes	No	
System clock control register (SCC)				
Sub-oscillator control register (SOS)				

(2/2)

Item	μPD750004	μPD754304	μPD75P4308
Memory bank select register (MBS)	Selectable from memory banks 0 and 1	Fixed at memory bank 0	
Stack bank select register (SBS)			
Timer/event counter mode register (TM0, TM1)	Bits 0, 1, and 7 are fixed at 0	-	
Vectored interrupts	External: 3, Internal: 4		
Test inputs	External: 1, Internal: 1	External: 1	
Test enable flag (IEW)	Yes	No	
Test request flag (IRQW)			
Power supply voltage	V _{DD} = 2.2 to 5.5 V	V _{DD} = 1.8 to 5.5 V	
Operating ambient temperature	T _A = -40 to +85°C		
Package	<ul style="list-style-type: none"> • 42-pin plastic shrink DIP (600 mil) • 44-pin plastic QFP (10 × 10 mm) 	<ul style="list-style-type: none"> • 36-pin plastic shrink SOP (300 mil, 0.8-mm pitch) 	

APPENDIX B. DEVELOPMENT TOOLS

The following development tools are provided for system development using the μPD75P4308. In the 75XL series, the common relocatable assembler is used together with the device file of each model.

RA75X relocatable assembler	Host machine			Part No. (name)
		OS	Supply medium	
PC-9800 Series	MS-DOS™ (Ver.3.30 to Ver.6.2 ^{Note})	3.5" 2HD	μS5A13RA75X	
		5" 2HD	μS5A10RA75X	
IBM PC/AT™ or compatible	Refer to OS for IBM PCs	3.5" 2HC	μS7B13RA75X	
		5" 2HC	μS7B10RA75X	

Device file	Host machine			Part No. (name)
		OS	Supply medium	
PC-9800 Series	MS-DOS (Ver.3.30 to Ver.6.2 ^{Note})	3.5" 2HD	μS5A13DF754304	
		5" 2HD	μS5A10DF754304	
IBM PC/AT or compatible	Refer to OS for IBM PCs	3.5" 2HC	μS7B13DF754304	
		5" 2HC	μS7B10DF754304	

Note Ver. 5.00 and above include a task swapping function, but this software is not able to use that function.

Remark Operations of the assembler and the device file are guaranteed only when using the host machine and OS described above.

PROM Write Tools

Hardware	PG-1500	A stand-alone system can be configured of a single-chip microcontroller with on-chip PROM when connected to an auxiliary board (attached) and a programmer adapter (separately sold). Alternatively, a PROM programmer can be operated on a host machine for programming. In addition, typical PROMs in capacities ranging from 256 K to 4 Mbits can be programmed.			
	PA-75P4308GS	This is a PROM programmer adapter for the μPD75P4308GS. It can be used when connected to a PG-1500.			
Software	PG-1500 controller	Establishes serial and parallel connections between the PG-1500 and a host machine for host-machine control of the PG-1500.			
		Host machine		Part No. (name)	
			OS		Supply medium
		PC-9800 Series	MS-DOS (Ver.3.30 to Ver.6.2 ^{Note})	3.5" 2HD	μS5A13PG1500
				5" 2HD	μS5A10PG1500
IBM PC/AT or compatible	Refer to OS for IBM PCs	3.5" 2HD	μS7B13PG1500		
		5" 2HC	μS7B10PG1500		

Note Ver. 5.00 and above include a task swapping function, but this software is not able to use that function.

Remark Operation of the PG-1500 controller is guaranteed only when using the host machine and OS described above.

Debugging Tools

In-circuit emulators (IE-75000-R and IE-75001-R) are provided as program debugging tools for the μPD75P4308. Various system configurations using these in-circuit emulators are listed below.

Hardware	IE-75000-R ^{Note 1}	The IE-75000-R is an in-circuit emulator to be used for hardware and software debugging during development of application systems that use 75X or 75XL Series products. For development of the μPD754304 subseries, the IE-75000-R is used with a separately sold emulation board (IE-75300-R-EM) and emulation probe (EP-754304GS-R). These products can be applied for highly efficient debugging when connected to a host machine and PROM programmer. The IE-75000-R can include a connected emulation board (IE-75000-R-EM).			
	IE-75001-R	The IE-75001-R is an in-circuit emulator to be used for hardware and software debugging during development of application systems that use 75X or 75XL Series products. The IE-75001-R is used with a separately sold emulation board (IE-75300-R-EM) and emulation probe (EP-754304GS-R). These products can be applied for highly efficient debugging when connected to a host machine and PROM programmer.			
	IE-75300-R-EM	This is an emulation board for evaluating application systems that use the μPD754304 subseries. It is used in combination with the IE-75000-R or IE-75001-R in-circuit emulator.			
	EP-754304GS-R	This is an emulation probe for the μPD75P4308.			
	EV-9500GS-36	When being used, it is connected with the IE-75000-R or IE-75001-R and the IE-75300-R-EM. It includes a flexible board (EV-9500GS-36) to facilitate connections with various target systems.			
Software	IE control program	This program can control the IE-75000-R or IE-75001-R on a host machine when connected to the IE-75000-R or IE-75001-R via an RS-232-C or Centronics interface.			
		Host machine		Part No. (name)	
			OS		Supply medium
		PC-9800 Series	MS-DOS (Ver.3.30 to Ver.6.2 ^{Note 2})	3.5" 2HD	μS5A13IE75X
				5" 2HD	μS5A10IE75X
IBM PC/AT or compatible	Refer to OS for IBM PCs	3.5" 2HC	μS7B13IE75X		
		5" 2HC	μS7B10IE75X		

- Notes**
- This is a service part provided for maintenance purpose only.
 - Ver. 5.00 and above include a task swapping function, but this software is not able to use that function.

- Remarks**
- Operation of the IE control program is guaranteed only when using the host machine and OS described above.
 - The μPD754302, 754304, and 75P4308 are commonly referred to as the μPD754304 subseries.

OS for IBM PCs

The following operating systems for the IBM PC are supported.

OS	Version
PC DOS™	Ver.5.02 to Ver.6.3 J6.1/V to J6.3/V
MS-DOS	Ver.5.0 to Ver.6.22 5.0/V to 6.2/V
IBM DOS™	J5.02/V

Caution Ver 5.0 and above include a task swapping function, but this software is not able to use that function.

★ APPENDIX C. RELATED DOCUMENTS

The related documents indicated in this publication may include preliminary versions. However, preliminary versions are not marked as such.

NOTES FOR CMOS DEVICES

① VOLTAGE APPLICATION WAVEFORM AT INPUT PIN

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between V_{IL} (MAX) and V_{IH} (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between V_{IL} (MAX) and V_{IH} (MIN).

② HANDLING OF UNUSED INPUT PINS

Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.

③ PRECAUTION AGAINST ESD

A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.

④ STATUS BEFORE INITIALIZATION

Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.

⑤ POWER ON/OFF SEQUENCE

In the case of a device that uses different power supplies for the internal operation and external interface, as a rule, switch on the external power supply after switching on the internal power supply. When switching the power supply off, as a rule, switch off the external power supply and then the internal power supply. Use of the reverse power on/off sequences may result in the application of an overvoltage to the internal elements of the device, causing malfunction and degradation of internal elements due to the passage of an abnormal current.

The correct power on/off sequence must be judged separately for each device and according to related specifications governing the device.

⑥ INPUT OF SIGNAL DURING POWER OFF STATE

Do not input signals or an I/O pull-up power supply while the device is not powered. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Input of signals during the power off state must be judged separately for each device and according to related specifications governing the device.

Regional Information

Some information contained in this document may vary from country to country. Before using any NEC Electronics product in your application, please contact the NEC Electronics office in your country to obtain a list of authorized representatives and distributors. They will verify:

- Device availability
- Ordering information
- Product release schedule
- Availability of related technical literature
- Development environment specifications (for example, specifications for third-party tools and components, host computers, power plugs, AC supply voltages, and so forth)
- Network requirements

In addition, trademarks, registered trademarks, export restrictions, and other legal issues may also vary from country to country.

• **The information in this document is current as of August, 2005. The information is subject to change without notice. For actual design-in, refer to the latest publications of NEC Electronics data sheets or data books, etc., for the most up-to-date specifications of NEC Electronics products. Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.**

- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".

The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.

"Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.

"Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).

"Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)

- (1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).
