

## Description

The XP devices are ultra-low phase noise quartz-based PLL oscillators supporting a large range of frequencies and output interface types. These devices are designed to operate at three different power supplies and are available in three package sizes with several pinout configurations, as well as three operational temperature ranges.

The XP devices can be programmed to generate an output frequency from 15MHz to 2100MHz with a resolution as low as 1Hz accuracy. The configuration capability of this family of devices allows for fast delivery times for both sample and large production orders.

Parts are for one time programming (OTP) at the factory for a fixed frequency application, or can be field programmable using I2C, based on system needs (see note 1 under Pin Descriptions).

## Features

- Output types: LVDS, LVPECL, CML
  - Frequency range: 15MHz to 2100MHz
- Output type: HCSSL
  - Frequency range: 15MHz to 725MHz
- Supply voltage options: 1.8V, 2.5V, or 3.3V
- Phase jitter (12kHz to 20MHz): 120fs typical
- Package options:
  - 7.0 × 5.0 × 1.7 mm
  - 5.0 × 3.2 × 1.17 mm
  - 3.2 × 2.5 × 1.07 mm
- Operating temperatures and frequency stability:
  - -40°C to +85°C, ±25ppm
  - -40°C to +105°C, ±50ppm

## Pin Assignments

**Figure 1. 7.0 × 5.0 mm, 5.0 × 3.2 mm, and 3.2 × 2.5 mm Packages**

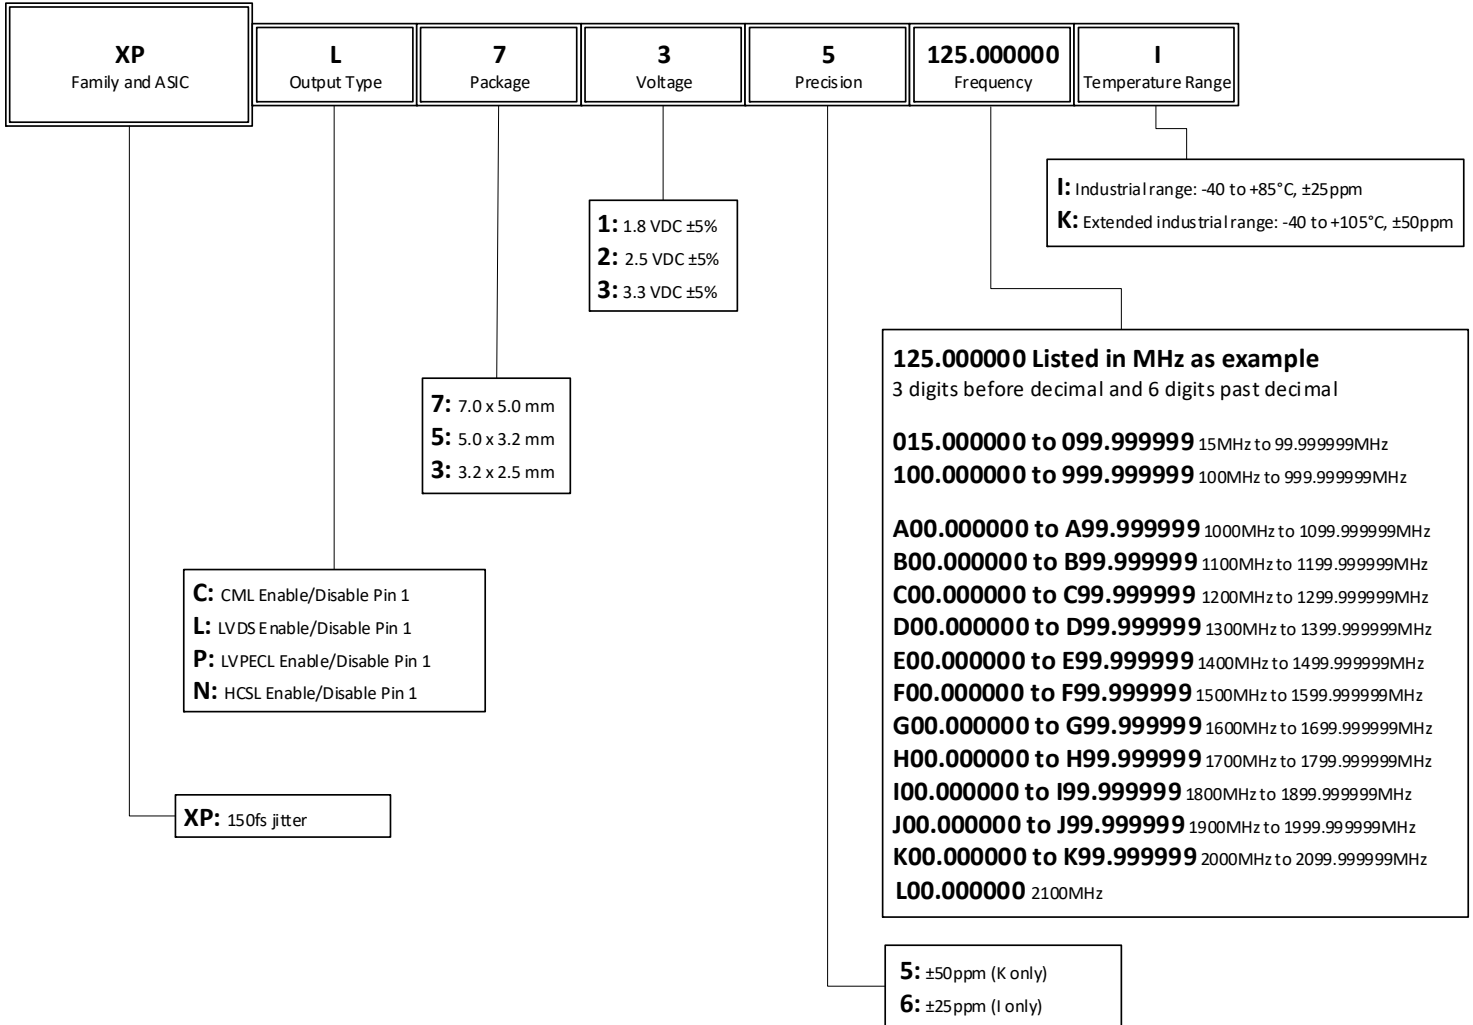

**Table 1. Pin Descriptions**

| Pin # | Pin Name         | Description   |
|-------|------------------|---|
| 1     | OE               | Output Enable (0 = output disabled, pulled high internally) |
| 2     | NC               | No connect  |
| 3     | GND              | Connect to ground   |
| 4     | OUT0             | Output  |
| 5     | OUT0b            | Complementary output  |
| 6     | V <sub>DD</sub>  | Supply voltage  |
| 7     | SDA <sup>1</sup> | Serial data   |
| 8     | SCL <sup>1</sup> | Serial clock  |

<sup>1</sup> Pins 7 and 8 are no connect for non-I2C applications.

See [Revision History](#) for more details.

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the device. These ratings, which are standard values for Renesas commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range. Thermal characteristics, in actual applications, should be assessed case by case to guarantee junction temperature does not exceed 125°C.

**Table 2. Absolute Maximum Ratings**

| Item                              | Rating         |           |     |           |      |           |
|-----------------------------------|----------------|-----------|-----|-----------|------|-----------|
| V <sub>DD</sub>                   | -0.5V to +3.8V |           |     |           |      |           |
| OE                                | -0.5V to +3.8V |           |     |           |      |           |
| Storage Temperature               | -55°C to 125°C |           |     |           |      |           |
| Maximum Junction Temperature      | 125°C          |           |     |           |      |           |
| Theta J <sub>A</sub> <sup>1</sup> | JD8            | 75.9 °C/W | JX8 | 89.6 °C/W | JSW8 | 97.4 °C/W |
| Theta J <sub>B</sub> <sup>1</sup> |                | 48.6 °C/W |     | 54.3 °C/W |      | 66.8 °C/W |

<sup>1</sup> Thermal characteristics are based on simulation in standard condition.

## ESD Compliance

**Table 3. ESD Compliance**

|                        |       |
|------------------------|-------|
| Human Body Model (HBM) | 2000V |
|------------------------|-------|

## Mechanical Testing

**Table 4. Mechanical Testing \***

| Parameter                       | Test Method  |
|---------------------------------|--|
| Mechanical Shock                | Half-sine wave with 0.3ms 3000G. X, Y, Z each direction 1 time.  |
| Mechanical Vibration            | Frequency: 10 to 55MHz amplitude: 1.5mm.<br>Frequency: 55–2000Hz peak value: 20G.<br>Duration time: 4H for each X,Y,Z axis; total 12hours. |
| High Temp Operating Life (HTOL) | 1000 hours at 125°C (under power).   |
| Hermetic Seal                   | Gross leak (air leak test). Fine leak (Helium leak test) He-pressure: 6kgf/cm <sup>2</sup> 2 hours.  |

\* MSL level does not apply.

## Solder Reflow Profile

## DC Electrical Characteristics

Note for all DC Electrical Characteristics tables: A pull-up resistor from  $V_{DD}$  to OE enables output when pin 1 is left open.

**Table 5. 3.3V IDD DC Electrical Characteristics**

$V_{DD} = 3.3V \pm 5\%$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ ,  $-40^\circ C$  to  $+105^\circ C$ , typical at 156.25MHz.

| Symbol   | Parameter           | Output Type | Conditions         | Minimum | Typical | Maximum | Units |
|----------|---------------------|-------------|--------------------|---------|---------|---------|-------|
| $I_{DD}$ | Current Consumption | LVDS        | 15MHz to 400MHz.   | —       | 59      | 67      | mA    |
|          |                     |             | 400MHz to 2.1GHz.  | —       | —       | 85      |       |
|          |                     | LVPECL      | 15MHz to 212.5MHz. | —       | 84      | 94      |       |
|          |                     |             | 212MHz to 400MHz.  | —       | —       | 110     |       |
|          |                     |             | 400MHz to 2.1GHz.  | —       | —       | 110     |       |
|          |                     | HCSL        | 15MHz to 725MHz.   | —       | 74      | 83      |       |
|          |                     | CML         | 15MHz to 2.1GHz.   | —       | 45      | 61      |       |

**Table 6. 2.5V IDD DC Electrical Characteristics**

$V_{DD} = 2.5V \pm 5\%$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ ,  $-40^\circ C$  to  $+105^\circ C$ , typical at 156.25MHz.

| Symbol   | Parameter           | Output Type | Conditions           | Minimum | Typical | Maximum | Units |
|----------|---------------------|-------------|----------------------|---------|---------|---------|-------|
| $I_{DD}$ | Current Consumption | LVDS        | 15MHz to 400MHz.     | —       | 59      | 66      | mA    |
|          |                     |             | 400MHz to 2.1GHz.    | —       | —       | 85      |       |
|          |                     | LVPECL      | 15MHz to 156.25MHz.  | —       | 84      | 94      |       |
|          |                     |             | 156.25MHz to 400MHz. | —       | —       | 110     |       |
|          |                     |             | 400MHz to 2.1GHz.    | —       | —       | 110     |       |

## AC Electrical Characteristics

Notes for all AC Electrical Characteristics tables:

1. A pull-up resistor from  $V_{DD}$  to OE enables output when pin 1 is left open.
2. Installation should include a  $0.01\mu\text{F}$  bypass capacitor placed between  $V_{DD}$  and GND to minimize power supply line noise.

**Table 14. 3.3V AC Electrical Characteristics**

$V_{DD} = 3.3\text{V} \pm 5\%$ ,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ ,  $-40^\circ\text{C}$  to  $+105^\circ\text{C}$ .

**Figure 5. CML Output Waveforms**

## Termination for 3.3V LVPECL Outputs

The clock layout topology shown below is a typical termination for LVPECL outputs. The two different layouts mentioned are recommended only as guidelines.

The differential output is a low impedance follower output that generate ECL/LVPECL compatible outputs. Therefore, terminating resistors (DC current path to ground) or current sources must be used for functionality. These outputs are designed to drive 50Ω transmission lines. Matched impedance techniques should be used to maximize operating frequency and minimize signal distortion. Figure 6 and Figure 7 show two different layouts which are recommended only as guidelines. Other suitable clock layouts may exist and it would be recommended that the board designers simulate to guarantee compatibility across all printed circuit and clock component process variations.

**Figure 6. 3.3V LVPECL Output Termination**

**Figure 7. 3.3V LVPECL Output Termination**

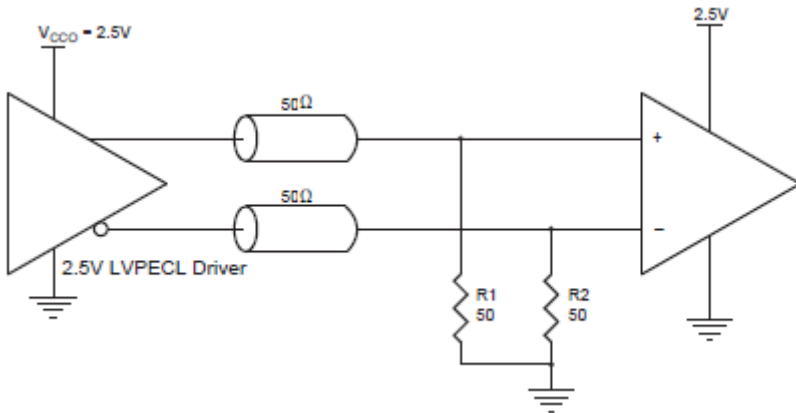

## Termination for 2.5V LVPECL Outputs

Figure 8 and Figure 9 show examples of termination for 2.5V LVPECL driver. These terminations are equivalent to terminating 50Ω to  $V_{CC0} - 2V$ . For  $V_{CC0} = 2.5V$ , the  $V_{CC0} - 2V$  is very close to ground level. The R3 in Figure 9 can be eliminated and the termination is shown in Figure 10.

**Figure 8. 2.5V LVPECL Driver Termination Example**

**Figure 9. 2.5V LVPECL Driver Termination Example**

**Figure 10. 2.5V LVPECL Driver Termination Example**

## LVDS Driver Termination

For a general LVDS interface, the recommended value for the termination impedance ( $Z_T$ ) is between  $90\Omega$  and  $132\Omega$ . The actual value should be selected to match the differential impedance ( $Z_0$ ) of your transmission line. A typical point-to-point LVDS design uses a  $100\Omega$  parallel resistor at the receiver and a  $100\Omega$  differential transmission-line environment. In order to avoid any transmission-line reflection issues, the components should be surface mounted and must be placed as close to the receiver as possible. Renesas offers a full line of LVDS compliant devices with two types of output structures: current source and voltage source.

The standard termination schematic as shown in [Figure 11](#) can be used with either type of output structure. [Figure 12](#), which can also be used with both output types, is an optional termination with center tap capacitance to help filter common mode noise. The capacitor value should be approximately  $50\text{pF}$ . If using a non-standard termination, it is recommended to contact Renesas and confirm if the output structure is current source or voltage source type. In addition, since these outputs are LVDS compatible, the input receiver's amplitude and common-mode input range should be verified for compatibility with the output.

**Figure 11. Standard LVDS Termination**

**Figure 12. Optional LVDS Termination**

## Recommended Termination for HCSL Outputs

Figure 13 is the recommended source termination for applications where the driver and receiver will be on a separate PCBs. This termination is the standard for PCI Express™ and HCSL output types. All traces should be 50Ω impedance single-ended or 100Ω differential. Figure 14 is the recommended termination for applications where a point-to-point connection can be used. A point-to-point connection contains both the driver and the receiver on the same PCB. With a matched termination at the receiver, transmission-line reflections will be minimized. In addition, a series resistor (Rs) at the driver offers flexibility and can help dampen unwanted reflections. The optional resistor can range from 0Ω to 33Ω. All traces should be 50Ω impedance single-ended or 100Ω differential.

**Figure 13. Recommended Source Termination (where the driver and receiver will be on separate PCBs)**

**Figure 14. Recommended Termination (where a point-to-point connection can be used)**

## CML Termination

Figure 15 shows an example of the termination for a CML driver. In this example, the transmission line characteristic impedance is 50Ω. The R1 and R2 50Ω matched load terminations are pulled up to VDDO. The matched loads are located close to the receiver.

**Figure 15. CML Termination Example**

## Package Outline Drawings

The package outline drawings are located at the end of this document and are accessible from the Renesas website. The package information is the most current data available and is subject to change without revision of this document.

[7.0 × 5.0 mm, 8-CLCC \(JD8D1\) package](#)

[5.0 × 3.2 mm, CLCC-8 \(JX8D1\) package](#)

[3.2 × 2.5 mm, 8-COL \(JSW8D1\) package](#)

## Marking Diagrams

**Figure 16. Marking Configuration for the 7.0 × 5.0 mm and 5.0 × 3.2 mm Packages**

- Line 1 denotes the truncated part number (e.g., “xxxx” is L726, P516).
- Line 2 indicates the following:
  - “ABC” denotes the truncated first three digits of the frequency code (e.g., 156).
  - “-YW” denotes the last digit of the year and week when the part was assembled.
- Line 3 indicates the following:
  - “\$” denotes the mark location.
  - “PF” is where “P” denotes the package coding number and “F” denotes the frequency coding number.
  - “\*\*” denotes the sequential lot number.

**Figure 17. Marking Configuration for the 3.2 × 2.5 mm Package**

- Line 1 indicates the following:
  - “ABC” denotes the truncated first three digits of the frequency code (e.g., 156).
  - “-YW” denotes the last digit of the year and week when the part was assembled.
- Line 2 indicates the following:
  - “\$” denotes the mark location.
  - “PF” is where “P” denotes the package coding number and “F” denotes the frequency coding number.
  - “\*\*” denotes the sequential lot number.

## Revision History

| Revision Date      | Description of Change  |
|--------------------|--|
| February 10, 2022  | Updated Output Clock Duty Cycle minimum and maximum specifications for LVDS, LVPECL, HCSL, and CML in <a href="#">Table 14</a> , <a href="#">Table 15</a> , and <a href="#">Table 16</a> . |
| July 13, 2021      | <ul style="list-style-type: none"> <li>▪ Updated Ordering Information “Precision” option.</li> <li>▪ Updated Package Outline Drawings section.</li> </ul>                                  |
| September 21, 2020 | Updated ordering code to have I2C (was precision field, which is redundant with temperature field).  |
| July 22, 2019      | Updated LVDS Differential Output Voltage minimum from 0.28 to 0.30V.   |
| May 22, 2019       | Changed 3.3V, 2.5V, and 1.8V LVPECL current consumption conditions value from 670MHz to 2.1GHz.  |
| April 1, 2019      | Initial release.   |
