The Complete Microcontroller Platform.
V850 J Series.

RENESAS

RENESAS V850

#1MCU REACH FURTHER
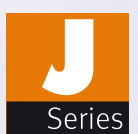

J Series

V850 is the world's number one selling 32-bit microcontroller from the world's number one microcontroller supplier.
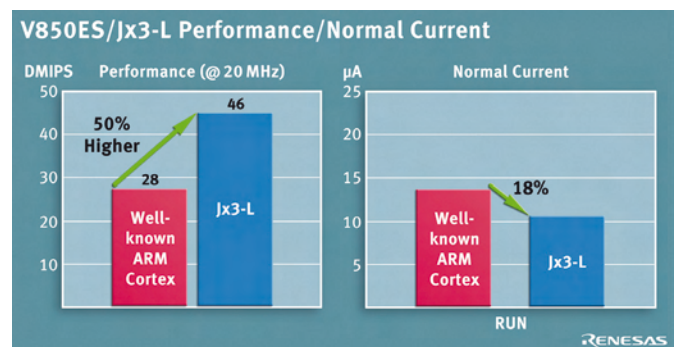

V850 J Series

With a range spanning 40-pins up to 144-pins, V850 J Series offers a complete platform line-up with total flexibility of choice in terms of performance, memory, features such as ultra low power consumption, up to 1MB of highly secure Flash, and wide-ranging connectivity options from USB2.0 Host & Function or Ethernet to a huge number of other serial interfaces on-chip. And it's all supported by a rich eco system offering development tools, middleware, 3rd party alliances and vibrant online engineering communities.

NO. 1 WORLDWIDE*
V850
32-BIT MCUs

J Series

Compelling Features

- 3V V850ES core with up to 1.87 DMIPS / MHz performance

- Zero wait-state Flash

- Ultra low power modes enabling RTC to run from a 0.47F super capacitor for more than 8 days

- Preserves RAM & register content in power save modes

- Comprehensive Flash access protection & safety features including boot swap & read / write bit ECC

- Real up / down compatibility across J Series

- Small package availability in WFQN & FBGA down to 5x5mm

- Quality & lifetime record second to none

V850ES/Jx3-L Performance/Normal Current

DMIPS | Performance (@ 20 MHz)
50 —
40 — 50% Higher — 46
30 — 28 — Jx3-L
20 — Well-known ARM Cortex
10 —

μA | Normal Current

5 — Jx3-L
RUN

RENESAS

Special Flavours

As well as the general-purpose V850ES/Jx3 family, running at 32MHz and offering up to 1MB embedded Flash with an abundance of timers, up to 16 ADC channels and many serial interfaces, the V850 J Series includes three families with added low power and connectivity features.

V850ES/Jx3-L
Low Power

- Just 12mA in Run, 7mA in Sleep with peripherals on, 1.2uA in Stop & 1uA in RTC backup

- Supply voltage down to 2.0V

- Accurate hard RTC with independent power pins

- Versions with USB2.0 function available

V850ES/Jx3-H / -U
USB2.0

- USB2.0 Full-speed (12Mbps) host / function built-in

- 98DMIPS at 48MHz 3V operation

- Use Host & Function simultaneously

- PPON (VBUS power supply output), OCI (over current detection) pin input

- Free of charge software drivers & protocol stacks

V850ES/Jx3-E
Ethernet

- IEEE802.3-compliant 10/100 Ethernet MAC built-in

- USB2.0 Full-speed (12Mbps) function built-in

- 1Mbs ISO 11898 CAN interface with 32 message buffers / channel

- Up to 50MHz 3V operation

- Free of charge software drivers & protocol stacks

Complete Development Environment

V850 tools come with IDE trials, drivers, example programs, middleware and all the hardware you need out of the box, and are further supported by a large 3rd party network including the selected examples below.

IAR SYSTEMS — IAR Embedded Workbench

Green Hills SOFTWARE, INC. — Green Hills Multi

Applilet — Applilet Graphical Code Development & Driver Configuration

embOS — Segger Embos RTOS

freeRTOS — Free of charge RTOS at www.freertos.org

Micrium — uC/OS RTOS for Safety-Critical Apps

emUSB Device — Renesas & Segger USB2.0 Driver Support

Supported by Renesas IECUBE emulator, MINICUBE2 + target boards for On-Chip Debug & development programming and PG-FP5 for full programming

Supported demonstration kits, Low Power, Ethernet & USB2.0 Host + Function and USB2.0 Function Demonstration Kits

A V850ES/Jx3-L USB stick Starter Kit is also available complete with GUI-basedcontrol & evaluation software
