

ISL95820EVAL1Z Evaluation Board User Guide

Hardware Description

The ISL95820EVAL1Z evaluation board demonstrates the performance of the ISL95820 4-phase voltage regulator for Intel VR12.5 and VR12.6 CPUs. The ISL95820 features Intersil's Robust Ripple Regulator R3 Technology™. An on-board dynamic-load generator is included for evaluating the transient-load response. It applies a 300µs pulse of approximately 0.05Ω/0.1Ω load across V_{CORE} and PGND.

Contents of this document include:

- Design criteria
- Recommended test equipment
- Interface connections
- Switch descriptions
- Photographs of the evaluation board and PMBus interface module.
- Jumper and connector descriptions
- Test point descriptions
- Evaluation board documentation
 - Bill of materials
 - Schematic
 - Silk-screen plots
 - Board layer plots

TABLE 1. DC/DC DESIGN CRITERIA

PARAMETER	VALUE	UNITS
V _{IN}	12	VDC
V _O	0 to 2.30	VDC
Full-load	100	ADC
PWM Frequency	300	KHz

Recommended Equipment

- (Qty. 1) Adjustable 20V, 15A power supply (for V_{IN})
- (Qty. 1) Fixed 5V, 100mA power supply (for V_D)
- (Qty. 1) Fixed 12V, 100mA power supply (for the dynamic-load generator)
- (Qty. 1) Adjustable constant current electronic load
- (Qty. 1) Digital voltmeter
- (Qty. 1) Four-channel oscilloscope

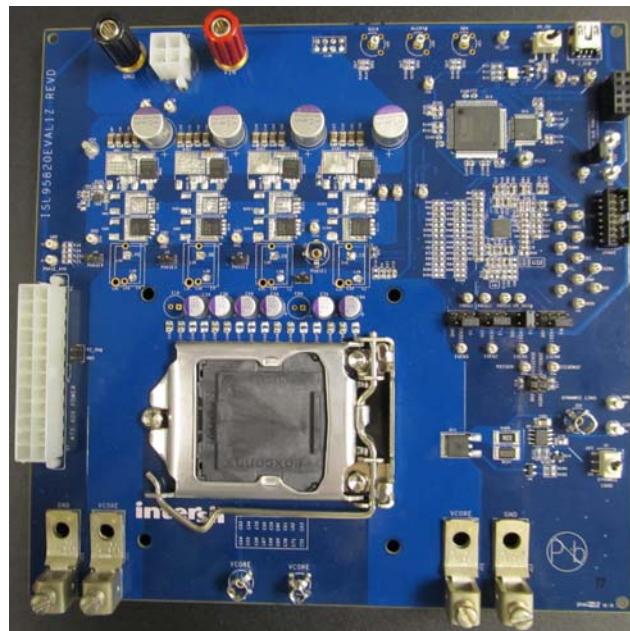

Interface Connections

- V_{IN}: Input voltage to the power stage
 - J5: V_{IN} positive power input
 - TP18: V_{IN} positive voltage sense
 - J6: V_{IN} return power input
 - TP32: V_{IN} return voltage sense
- CPU V_{CORE}: CORE regulated output voltage
 - J11 and J12: V_{CORE} positive power output
 - J13 and J14: V_{CORE} return power output
- +5V: +5V input voltage
 - TP29: +5V positive input
 - TP16: +5V sense
 - TP30: +5V return input
- +12V: Input voltage for the dynamic-load generator
 - TP3: 12V positive input
 - TP2: 12V return input

Switch Descriptions

- S3: Enable
 - OFF: Short the VR_ON pin to GND (disable PWM)
 - ON: Allow the VR_ON pin to pull-up to +5V (enable PWM)
- S2: Dynamic load for CPU
 - OFF: On-board dynamic load disabled
 - ON: On-board dynamic load enabled

Evaluation Board Photograph

Application Note 1902

The ISL95820 evaluation board features an Intel processor socket (reference designator U2), intended for the installation of an Intel VRTT (Voltage Regulator Test Tool) Interposer. This device is required for VR platform validation, to establish compliance with various Intel platform performance specifications.

Test Set-Up

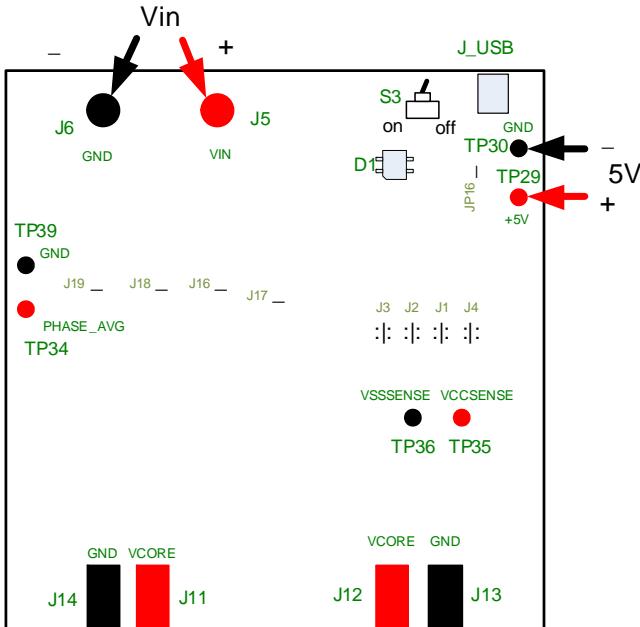

FIGURE 1. TEST SET-UP

- Apply V_{IN} (recommend +12V) to J5/J6 and apply +5V to TP29/TP30. LED D1 should be red when S3 is off. Then flip on S3 to start up controller. The following facts need to be established for a good board:
 - LED D1 turns green.
 - Voltage meter measurement on TP35/TP36 shows ~1.70V.

SVID Test Procedure

- Connect the evaluation board and PC using USB-mini USB cable inserted into the J_USB receptacle.
- Power on the evaluation board as previous test set-up procedure.
- Start up Intersil SVID control software. Select the SVID/PMBus Control tab. The USB interface status will turn green for correct connection.
- Using the SVID section of the interface, with SVID address 0h, set VID to 1.800V, then click "SEND". One "ACK" message will be received for correct communications.
- Voltage meter measurement on TP35/TP36 for ~1.80V will indicate a good on-board SVID emulator.

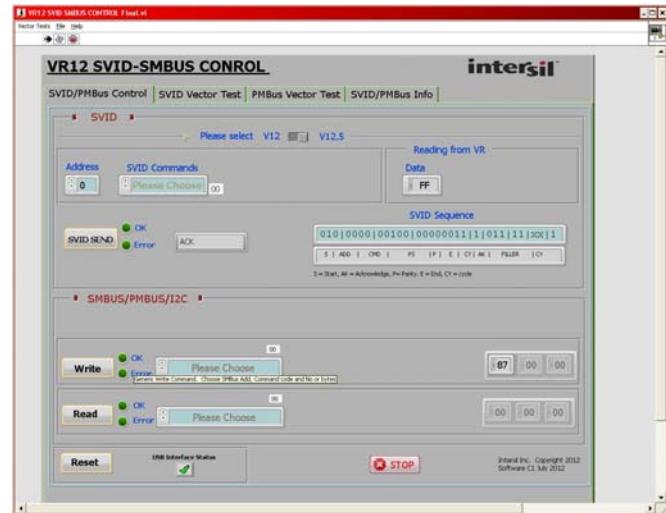

FIGURE 2. SVID/SMBus EMULATOR SOFTWARE

Operation of the PMBus interface requires an Intersil-supplied interface module, as shown in Figure 3. See the ISL95820 datasheet for information about the PMBus interface.

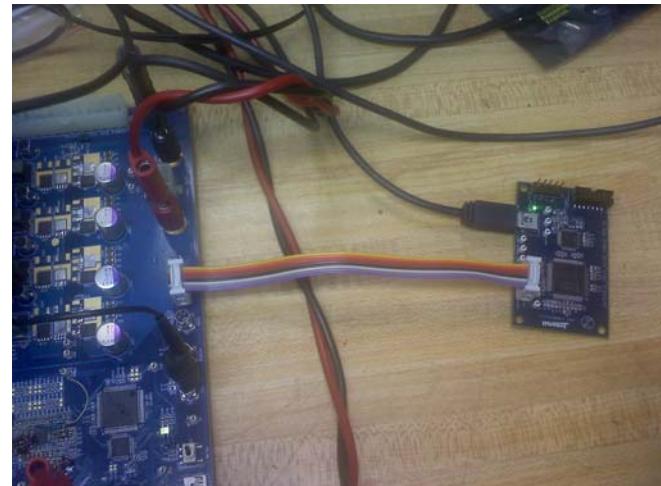

FIGURE 3. PMBUS INTERFACE MODULE CONNECTION TO THE EVALUATION BOARD

Jumper and Connector Descriptions

In the following sections, jumpers, connectors, and test points are ordered by reference designator. Items with related functions may be grouped by color.

- **JUSB:** USB cable connection, for running the Intersil SVID control software
- **JHDR2:** Required for programming the USB-to-SVID interface
- **JTAG1:** Required for programming the USB-to-SVID interface
- **JCON:** Ribbon cable connection to the PMBus interface module.
- **J1:** Set ISEN1 connection. Connect ISEN1 to driver (the middle jumper) for 1-, 2-, 3-, or 4-phase operation.
- **J2:** Set ISEN2 connection. Connect ISEN2 to driver (the middle jumper) for 2-, 3-, or 4-phase operation. If ISEN2 is connected to +5V, phase-2 (and phase-3 and phase-4) will be disabled.
- **J3:** Set ISEN3 connection. Connect ISEN3 to driver (the middle jumper) for 3-, or 4-phase operation. If ISEN3 is connected to +5V, phase-3 (and phase-4) will be disabled.
- **J4:** Set ISEN4 connection. Connect ISEN4 to driver (the middle jumper) for 4-phase operation. If ISEN4 is connected to +5V, phase-4 will be disabled.
- **J5:** VIN banana receptacle (red)
- **J6:** VIN return (ground) banana receptacle (black)
- **J7:** ATX 12V connector
- **J8:** ATX AUX POWER connector
- **J11:** VCORE screw lug, for external load connection
- **J12:** VCORE screw lug, for external load connection
- **J13:** Ground screw lug, for external load connection
- **J14:** Ground screw lug, for external load connection
- **JP16:** If the jumper is installed, the +5V rail supplies the +3.3V, +2.5V, 1.2V rails to the auxiliary circuit on the board. When measuring board efficiency, remove the jumper and apply +3.3V to TP37.
- **J16:** Install the jumper to include Phase 2 in the PHASE_AVG resistive sum test point. With the jumper removed, the pin closest to L2 can be used as a Phase 2 test point.
- **J17:** Install the jumper to include Phase 1 in the PHASE_AVG resistive sum test point. With the jumper removed, the pin closest to L1 can be used as a Phase 1 test point.
- **J18:** Install the jumper to include Phase 3 in the PHASE_AVG resistive sum test point. With the jumper removed, the pin closest to L3 can be used as a Phase 3 test point.
- **J19:** Install the jumper to include Phase 4 in the PHASE_AVG resistive sum test point. With the jumper removed, the pin closest to L4 can be used as a Phase 4 test point.
- **J23:** ATX AUX POWER PS_ON# grounding jumper

Test Point Descriptions

TEST POINT	DESCRIPTION
TP1	VR_ON, active high
TP2	VIN return (ground) for 12V dynamic load supply
TP3	VIN for 12V dynamic load supply
TP4	COMP pin. This is the voltage feedback error amplifier output, which is the input to the R3™ Modulator.
TP5	Ground
TP6	FB pin
TP7	VR temperature sense NTC pin
TP8	VR_HOT#, open-drain temperature fault output pin, pulled up to VTT
TP9	IMON pin, DC output current monitor and programming
TP10	ISEN1 pin, phase 1 current balance input
TP11	ISEN2 pin, phase 2 current balance input
TP12	ISEN3 pin, phase 3 current balance input
TP13	PGOOD pin, open-drain voltage good status output, pulled up to +3.3V
TP14	VSEN, kelvin sense of the output voltage at the load (the U2 Interposer), also response pin for loop transfer function testing.
TP15	VSEN1, kelvin sense of the output voltage at the load (the U2 Interposer), also excitation pin for loop transfer function testing.
TP16	+5V, VDD (and optional 5V driver) supply sense pin
TP17	3.3V return (ground) sense
TP18	VIN (12VDC) supply test point
TP19	ISUMP pin, part of the output current sense mechanism
TP20	ISUMN, part of the output current sense mechanism
TP21	ISUMN1, on the ISUMN pin, part of the output current sense mechanism
TP22	ISEN4 pin, phase 4 current balance input
TP23	UG1, phase 1 upper FET gate signal
TP24	PROG1 pin
TP25	PROG2 pin
TP26	PROG3 pin
TP27	VDR, phase 4 external driver supply post and test point
TP28	FB2 pin

Application Note 1902

Test Point Descriptions (continued)

TEST POINT	DESCRIPTION
TP29	+5V supply input connection post. Clip +5V VDD (and optionally +5V driver) supply to this post.
TP30	+5V supply return (ground) input connection post. Clip the ground return connection for VDD (and optionally +5V driver) supply to this post.
TP31	VCCP pin, phase 1-3 integrated driver supply post and test point
TP32	PGND sense, VIN return (ground) sense point
TP33	LG1, phase 1 lower FET gate signal
TP34	PHASE_AVG, the resistive summation of the (jumper installed) phase signals
TP35	VCCSENSE, kelvin sense of the output voltage at the load.
TP36	VSSSENSE, kelvin sense of the output voltage return (ground) at the load.
TP37	3.3V rail, output of U9 LDO
TP38	VTT, 1.05V rail, output of U8 LDO
TP39	Ground
TP40	Ground
TP41	Ground
TP42	Ground
TP44	Ground
TPW4	PWM4
J9	VCORE oscilloscope grounded-barrel probe connection, for small barrel probes
J10	VCORE oscilloscope grounded-barrel probe connection, for large barrel probes
J15	Dynamic load current sense, oscilloscope grounded-barrel probe connection, for large barrel probes
J17	PHASE1 test point (pin nearest L1). This is also part of the PHASE_AVG test point jumper network.
J16	PHASE2 test point (pin nearest L2). This is also part of the PHASE_AVG test point jumper network.
J18	PHASE3 test point (pin nearest L3). This is also part of the PHASE_AVG test point jumper network.
J19	PHASE4 test point (pin nearest L4). This is also part of the PHASE_AVG test point jumper network.

Test Point Descriptions (continued)

TEST POINT	DESCRIPTION
J20	ALERT#, open drain SVID bus signal, oscilloscope grounded-barrel probe connection, for large barrel probes
J21	SDA, SVID bus data signal, oscilloscope grounded-barrel probe connection, for large barrel probes
J22	SCK, SVID bus clock signal, oscilloscope grounded-barrel probe connection, for large barrel probes
J24	4-pin differential-probe VCORE test point. These four pins are arranged to permit differential voltage sensing (with pin-insertion socket diff-probes on 0.1" centers) of (a) VCCSENSE-VSSSENSE; (b) VCORE-GND; (c) VSSSENSE-GND; and (d) VCCSENSE-VCORE. Pins are labeled in the silkscreen.
J25	PHASE1 oscilloscope grounded-barrel probe connection, for large barrel probes

Application Note 1902
