

RTKA223011DR0040BU

Demonstration Board

The RTKA223011DR0040BU demonstration board is a high voltage buck converter that demonstrates a low-cost high performance non-isolated AC/DC conversion from a universal input of $85V_{AC} \sim 265V_{AC}$ to a 24V output with output current up to 200mA.

The board has built-in overcurrent, short-circuit, input brownout, and over-temperature protections.

RTKA223011DR0040BU comes with a RAA223011 in TSOT23-5 package.

Key Features

- Universal input
- Standby power less than 13mW
- No audible noise
- Low cost external components

Specifications

This board is optimized for the following operating conditions:

- Input voltage: $85V_{AC} \sim 265V_{AC}$
- Output voltage: $24V_{DC}$
- Output current: 200mA max (at $230V_{AC}$ or higher)
- Efficiency: >74% at 100% load; 82% at 50% load
- No-load power: 11.3mW at $120V_{AC}$; 12.4mW at $230V_{AC}$
- Load regulation: -2.3%, load range 10% to 100%
- Operating temperature: $-45^{\circ}C \sim 70^{\circ}C$
- Board dimension: 29mm x 52mm

1. Circuit Description

The RTKA223011DR0040BU is a buck regulator implemented with a high-side float-switching topology, with switching frequency up to 30kHz. Its input has D1, D5, D6, and D7 operating as a full-bridge rectifier. FR is a 1W fusible resistor providing input overcurrent protection and inrush current limiting.

C1, L1, and C2 consists of the input filter that provides the energy buffer after rectification and reduces conducted EMI noises to the input. L2, D2, and C_{OUT} are the buck converter components. RFB1, RFB2, CFB2, and CFB1 provide the output feedback signal to the IC. D4 and R2 provide V_{CC} biasing current after startup, to increase the efficiency. They can be optional for low-cost, low-power applications. C_{VCC} is the IC supply capacitor.

1.1 Recommended Equipment

- AC power supply capable of generating AC voltage from 85V_{AC} to 265V_{AC} at 60Hz/50Hz, with at least 100mA output current capability.
- Load resistor box with adjustable value of 120Ω and up, or an electronics load that can emulate a resistor load or current load up to 200mA.
- Multi-meters to measure the output voltage and current.
- Power meter to measure the AC input power.

1.2 Quick Start Guide

1. Program the AC power supply with a voltage between 85V_{AC} and 265V_{AC} at the corresponding frequency of 60Hz or 50Hz.
2. While the AC power supply is off, connect the output cables of the AC power supply to the L and N terminal of the RTKA223011DR0040BU. An optional power meter can be added in between AC power supply output and the input of the board.
3. Connect the load to the output terminals VOUT and GND.
4. Connect a voltage meter to VOUT and GND and connect a current meter between board outputs and the load.
5. Turn on AC power supply.
