To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: http://www.renesas.com

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (http://www.renesas.com)
Send any inquiries to http://www.renesas.com/inquiry.
Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.

2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.

3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.

4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.

5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.

6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.

7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depend on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

   “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.

   “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.

   “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.

8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.

9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.

10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.

11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.

12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

1. This document is provided for reference purposes only so that Renesas customers may select the appropriate Renesas products for their use. Renesas neither makes warranties or representations with respect to the accuracy or completeness of the information contained in this document nor grants, any license to any intellectual property rights or any other rights of Renesas or any third party with respect to the information in this document.

2. Renesas shall have no liability for damages or infringement of any intellectual property or other rights arising out of the use of any information in this document, including, but not limited to, product data, diagrams, charts, programs, algorithms, and application circuit examples.

3. You should not use the products or the technology described in this document for the purpose of military applications such as the development of weapons of mass destruction or for the purpose of any other military use. When exporting the products or technology described herein, you should follow the applicable export control laws and regulations, and procedures required by such laws and regulations.

4. All information included in this document such as product data, diagrams, charts, programs, algorithms, and application circuit examples, is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas products listed in this document, please confirm the latest product information with a Renesas sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas such as that disclosed through our website. (http://www.renesas.com)

5. Renesas has used reasonable care in compiling the information included in this document, but Renesas assumes no liability whatsoever for any damages incurred as a result of errors or omissions in the information included in this document.

6. When using or otherwise relying on the information in this document, you should evaluate the information in light of the total system before deciding about the applicability of such information to the intended application. Renesas makes no representations, warranties or guarantees regarding the suitability of its products for any particular application and specifically disclaims any liability arising out of the application and use of the information in this document or Renesas products.

7. With the exception of products specified by Renesas as suitable for automobile applications, Renesas products are not designed, manufactured or tested for applications or otherwise in systems the failure or malfunction of which may cause a direct threat to human life or create a risk of human injury or which require especially high quality and reliability such as safety systems, or equipment or systems for transportation and traffic, healthcare, combustion control, aerospace and aeronautics, nuclear power, or undersea communication transmission. If you are considering the use of our products for such purposes, please contact a Renesas sales office beforehand. Renesas shall have no liability for damages arising out of the uses set forth above.

8. Notwithstanding the preceding paragraph, you should not use Renesas products for the purposes listed below:
   (1) artificial life support devices or systems
   (2) surgical implantations
   (3) healthcare intervention (e.g., excision, administration of medication, etc.)
   (4) any other purposes that pose a direct threat to human life

Renesas shall have no liability for damages arising out of the uses set forth in the above and purchasers who elect to use Renesas products in any of the foregoing applications shall indemnify and hold harmless Renesas Technology Corp., its affiliated companies and their officers, directors, and employees against any and all damages arising out of such applications.

9. You should use the products described herein within the range specified by Renesas, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas shall have no liability for malfunctions or damages arising out of the use of Renesas products beyond such specified ranges.

10. Although Renesas endeavors to improve the quality and reliability of its products, IC products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Please be sure to implement safety measures to guard against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other applicable measures. Among others, since the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.

11. In case Renesas products listed in this document are detached from the products to which the Renesas products are attached or affixed, the risk of accident such as swallowing by infants and small children is very high. You should implement safety measures so that Renesas products may not be easily detached from your products. Renesas shall have no liability for damages arising out of such detachment.

12. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written approval from Renesas.

13. Please contact a Renesas sales office if you have any questions regarding the information contained in this document, Renesas semiconductor products, or if you have any other inquiries.
Regulatory Compliance Notices

European Union Regulatory Notices on Electromagnetic Compatibility

CE Certifications:

This product complies with the following European EMC standards.

- EMC Directive 2004/108/EC
  - EN 55022 Class A

  WARNING: This is a Class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

- EN 55024

Information for Traceability:

- Authorized representative
  Name: Renesas Technology Corp.
  Address: Nippon Bldg., 2-6-2, Ote-machi, Chiyoda-ku, Tokyo 100-0004, Japan

- Manufacturer
  Name: Renesas Solutions Corp.
  Address: Nippon Bldg., 2-6-2, Ote-machi, Chiyoda-ku, Tokyo 100-0004, Japan

- Person responsible for placing on the market
  Name: Renesas Technology Europe Limited European Headquarters
  Address: Dukes Meadow, Millboard Road, Bourne End, Buckinghamshire, SL8 5FH, U.K.
United States Regulatory Notices on Electromagnetic Compatibility

FCC Certifications:

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Section 1 Connecting the Emulator with the User System

1.1 Components of the Emulator

The H8S/2218F E10A-USB emulator supports the H8S/2218 group (H8S/2218F, H8S/2218UF, H8S/2218CUF, H8S/2217CUF) and H8S/2212 group (H8S/2212F, H8S/2212UF, H8S/2212CUF, H8S/2211F, H8S/2211UF, H8S/2211CUF, H8S/2210CUF). Table 1.1 lists the components of the emulator.

</table>

**Note:** Additional document for the MCUs supported by the emulator is included. Check the target MCU and refer to its additional document.
1.2 Connecting the E10A-USB Emulator with the User System

Before connecting an E10A-USB emulator (hereafter referred to as the emulator) with the user system, a connector must be installed in the user system so that an user system interface cable can be connected. When designing the user system, refer to the connector and recommended circuits shown in this manual.

Before designing the user system, be sure to read the E10A-USB emulator user’s manual and the hardware manual for related MCUs.

The H8S/2218 group and H8S/2212 group supported by this emulator are referred to as the MCU unless the description is specific to either of them.

Connect pins 8, 9, 10, 12, 13, and 14 of the user system connector to GND firmly on the PCB. These pins are used as electrical GND and to monitor the connection of the user system connector.

Note the pin assignments of the user system connector.

![Diagram of connecting the user system interface cable to the user system](image)

**Figure 1.1 Connecting the User System Interface Cable to the User System**

Notes:
1. The pin number assignments of the 14-pin connector differ from those of the E8a emulator; however, the physical location is the same.
2. When designing the connector layout on the user board, do not place any components within 3 mm of the connector.
1.3 Pin Assignments of the User System Connector

Figure 1.2 shows the pin assignments of the user system connector.

![Pin Assignments of the User System Connector](image)

</tbody>
</table>

Notes:
1. Input to or output from the user system.
2. The symbol (#) means that the signal is active-low.
3. By detecting GND on the user system, the emulator decides whether the user system is connected or not.
4. Connect Vcc with the Vcc of the MCU.
5. The P75 to P77 and PG0 port functions of the H8S/2212 group cannot be used.
6. RES(in) is not the pin name of the MCU. It cannot be directly connected to the MCU pins.
1.4 Example of Emulator Connection

The figure shown below is an example of connecting the user system to the emulator.

- RES(in)# of pin 4 of the user system connector is a signal line in which the emulator outputs signals to the MCU. RES(in)# (pin 4) and the user logic reset circuit for the signal line must be connected to the MCU as shown above.

- RES(out)# of pin 7 of the user system connector is a signal line in which the emulator monitors the RES# signal of the MCU. The RES# must be pulled up before it is connected to pin 7 of the H-UDI port connector.

- Alphanumerics in parentheses indicate the signals of the H8S/2212 group.

Figure 1.3 Example of Emulator Connection
Notes: 1. TRST#, TCK, TMS, TDO, and TDI are used by the emulator for the H8S/2218 group. TRST#/NC, TCK/P76, TMS/P75, TDO/P77, and TDI/PG0 are used by the emulator for the H8S/2212 group. Pull up and connect the emulator and the MCU pins.

2. If the emulator is not connected to the user system, ground pin EMLE of the MCU, and when the emulator is connected to the user system, pull up the EMLE.
3. RES(in)# of pin 4 of the user system connector is a signal line in which the emulator outputs signals to the MCU. RES(in)# of pin 4 and the user logic reset circuit for the signal line must be connected to pin RES# of the MCU as shown in figure 1.6.

RES(out)# of pin 7 of the user system connector is a signal line in which the emulator monitors pin RES# of the MCU.

The RES# must be pulled up before it is connected to pin 7 of the user system connector.

![Figure 1.6 Connection of Pin RES#](image)

4. Pin FWE must be pulled up if the emulator is connected to the user system.

![Figure 1.7 Connection of Pin FWE](image)

5. Ground pins 8 to 10, and 12 to 14 of the user system connector.

6. Pin 11 of the user system connector must be connected to the user system Vcc (power supply). The amount of voltage permitted to input to the user system connector must be within the guaranteed range of the MCU.

7. When the H8S/2212 group in use is connected to the emulator, the pin functions listed below are not available.

<table>
<thead>
<tr>
<th>Table 1.2 Pin Functions Not Available</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>H8S/2212 Group</strong></td>
</tr>
<tr>
<td>P75 to P77 and PG0</td>
</tr>
</tbody>
</table>
8. The H8S/2218 group incorporates a boundary scan function. When the H8S/2218 group and the H8S/2212 group are used without connecting the emulator, refer to the description in section 13.5, Usage Notes, in the hardware manual of the MCU, and connect the MCU to the emulator.

![Diagram of TRST# of the H8S/2218 Group](image)

**Figure 1.8 TRST# of the H8S/2218 Group (Reference)**
Section 2 Specifications of the Software when Using the H8S/2218 Group and H8S/2212 Group

2.1 Differences between the H8S/2218 group, H8S/2212 group, and the Emulator

1. When the emulator system is initiated, it initializes the general registers and part of the control registers as shown in table 2.1. The initial value of the MCU is undefined. When the emulator is initiated from the workspace, a value to be entered is saved in a session. For the registers shown in table 2.1, values other than PC or CCR are not changed even if the CPU reset command is issued. If ER7 (SP) is changed as an odd value, it must be modified in the [Register] window.

Table 2.1 Register Initial Values at Emulator Power-On

<table>
<thead>
<tr>
<th>Register</th>
<th>Initial Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>PC</td>
<td>Reset vector value in the vector address table</td>
</tr>
<tr>
<td>ER0 to ER6</td>
<td>H'0</td>
</tr>
<tr>
<td>ER7 (SP)</td>
<td>H'10</td>
</tr>
<tr>
<td>CCR</td>
<td>1 for I mask, and others undefined</td>
</tr>
<tr>
<td>EXR</td>
<td>H'7F</td>
</tr>
</tbody>
</table>

2. System Control Register

In the emulator, the internal I/O registers can be accessed from the [IO] window. However, be careful when accessing the system control register. The emulator saves the register value of the system control register at a break and returns the value when the user program is executed. Since this is done during a break, do not rewrite the system control register in the [IO] window.

3. Memory Access during Emulation

If the memory contents are referenced or modified during emulation, realtime emulation cannot be performed because the user program is temporarily halted.

4. The emulator communicates with the MCU by using the RES#, TRST#, TCK, TMS, TDO, and TDI pins. These pins cannot be used.

5. The power consumed by the MCU can reach several mA. This is because the user power supply drives one IC to make the communication signal level match the user-system power-supply voltage.
6. Do not use an MCU that has been used for debugging.
   If the flash memory is rewritten many times, and the emulator is left for a few days, data may
   be lost due to retention problems.
   If the flash memory is rewritten many times, the data will not be erased. If an error message is
   displayed, exchange the MCU for a new one.

7. Program Flash Mode
   Sum data, which is displayed in the ‘Program Flash’ mode, is a value that data in the whole
   ROM areas has been added.

8. Note on Executing the User Program
   The initial value is rewritten since the emulator uses flash memory and registers during
   programming (Go, Step In, Step Out, or Step Over) of the flash memory.

9. MCU Operating Mode
   The emulator does not support modes 4 and 5 (expanded mode with on-chip ROM disabled
   mode). Use the emulator in mode 6 (expanded mode with on-chip ROM enabled) or mode 7
   (single-chip mode).

10. Loading Sessions
    Information for [JTAG clock] in the [Configuration] dialog box cannot be recovered by
        loading a session. Thus, the initial value after booting up will invariably be TCK.

11. Value Set in the [System Clock] Dialog Box when Connecting the Emulator
    Input the frequency of the oscillator in use in the [System Clock] dialog box (this also applies
    when the MCU is multiplied by the PLL circuit).

![Figure 2.1 System Clock Dialog Box](image)
12. Emulation on Programming or Erasing the Internal Flash Memory
   A break cannot be generated while the program for programming or erasing the internal flash memory is being called. Note that the following processing also cannot be performed:
   • Execution of the [STOP] button
   • Auto-update of the watch function and use of the tool-chip watch function
   • Memory operation during executing emulation

13. Initial Value of the JTAG Clock (TCK)
   The initial value for the JTAG Clock (TCK) is set as a suitable TCK value according to the frequency input to the [System Clock] dialog box when the emulator was connected.

14. Table 2.2 shows a list of devices supported by the H8S/2218 group and H8S/2212 group emulator.

   **Table 2.2  A List of Devices Supported by the Emulator**

<table>
<thead>
<tr>
<th>Project Target</th>
<th>Device</th>
</tr>
</thead>
</table>

15. Medium-speed mode, low-power-consumption mode
   During a break in user program execution in medium-speed or a low-power-consumption mode, the CPU is forcibly switched to the high-speed mode so that it performs operations at high speed.
2.2 The H8S/2218F E10A-USB Emulator Specific Functions and Notes

Notes: 1. Do not use an MCU that has been used for debugging.
2. If the flash memory is rewritten many times, and the emulator is left for a few days, data may be lost due to retention problems.
3. If the flash memory is rewritten many times, the data will not be erased. If an error message is displayed, exchange the MCU for a new one.

2.2.1 Emulator Driver Selection

Table 2.2 shows drivers which can be selected in the [E10A-USB Driver Details] dialog box.

<table>
<thead>
<tr>
<th>Type Name</th>
<th>Driver</th>

2.2.2 Hardware Break Functions

**Hardware Break Conditions:** In the H8S/2218F E10A-USB emulator, conditions of Break Condition 1, 2 can be set. Table 2.3 lists the items that can be specified.

<table>
<thead>
<tr>
<th>Items</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address bus condition</td>
<td>Breaks when the MCU address bus value matches the specified value.</td>
</tr>
<tr>
<td>Data bus condition</td>
<td>Breaks when the MCU data bus value matches the specified value. High or low byte or word can be specified as the access data size.</td>
</tr>
<tr>
<td>Read or write condition</td>
<td>Breaks in the read or write cycle.</td>
</tr>
</tbody>
</table>
Table 2.4 lists the combinations of conditions that can be set in the [Break condition] dialog box.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Read or Write Condition</td>
<td>O</td>
</tr>
</tbody>
</table>

Note: O: Can be set by checking the radio button in the dialog box.

Table 2.5 lists the combinations of conditions that can be set by the BREAKCONDITION_SET command.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Channel</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Break condition 1</td>
</tr>
<tr>
<td>Address Bus</td>
<td>O</td>
</tr>
<tr>
<td>Data Condition</td>
<td>O</td>
</tr>
<tr>
<td>Read or Write Condition</td>
<td>O</td>
</tr>
</tbody>
</table>

Note: O: Can be set by the BREAKCONDITION_SET command.

**Notes on Setting the Break Condition:**

1. When [Go to cursor], [Step In], [Step Over], or [Step Out] is selected, the settings of Break Condition are disabled.
2. The settings of Break Condition are disabled when an instruction to which a BREAKPOINT has been set is executed.
3. When step over function is used, the settings of BREAKPOINT and Break Condition are disabled.
### 2.2.3 Notes on Setting the [Breakpoint] Dialog Box

1. When an odd address is set, the address is rounded down to an even address.
2. A BREAKPOINT is accomplished by replacing instructions. Accordingly, it can be set only to the flash memory or the RAM area. However, a BREAKPOINT cannot be set to the following addresses:
   - An area other than flash memory or RAM
   - An instruction in which Break Condition is satisfied
3. During step execution, a BREAKPOINT is disabled.
4. A condition set at Break Condition is disabled immediately after starting execution when an instruction at a BREAKPOINT is executed. A break does not occur even if a condition of Break Condition is satisfied immediately after starting the execution.
5. When execution resumes from the breakpoint address after the program execution stops at the BREAKPOINT, single-step execution is performed at the address before execution resumes. Therefore, realtime operation cannot be performed.
6. Settings of BREAKPOINT and Break Condition are invalid while the STEP OVER function is being used.

### 2.2.4 Note on Using the JTAG Clock (TCK)

When the JTAG clock (TCK) is used, set the frequency to lower than that of the system clock. The value of the JTAG clock (TCK) becomes the initial value at execution of [Reset CPU] or [Reset Go].

### 2.2.5 Trace Function

The emulator uses the branch-instruction trace function in the MCU. It displays the branch-source address or the mnemonic, and operand can be acquired in realtime.
Renesas Technology Corp. Sales Strategic Planning Div. Nippon Bldg., 2-6-2, Ohte-machi, Chiyoda-ku, Tokyo 100-0004, Japan

RENESAS SALES OFFICES

Renesas Technology America, Inc.
450 Holger Way, San Jose, CA 95134-1368, U.S.A
Tel: (1) (408) 382-7500, Fax: (1) (408) 382-7501

Renesas Technology Europe Limited
Dukes Meadow, Millboard Road, Bourne End, Buckinghamshire, SL8 5FH, U.K.
Tel: (44) (1628) 585-100, Fax: (44) (1628) 585-900
