S-RIO Linux Support

The latest version of the Linux kernel code tree with support for IDT RapidIO devices is available for download from the public repository at www.kernel.org.

To browse the latest RapidIO code and Linux device drivers before downloading:

1. Go to the main gitweb repository page at **git.kernel.org/?p=linux/kernel/git/torvalds/linux.git**;a=tree.

2. For top-level RapidIO code, navigate to **drivers/rapidio**.

3. For switches or device drivers, navigate to the specific directory.

To list the RapidIO subsystem code updates history, search the Git repository using keyword "rapidio".

All patches and change proposals are also sent to main Linux kernel development mailing list vger.kernel.org.
