This notice is to advise our customer of the die revision change from Rev E to Rev F. This is a metal layer change only with the purpose as follows:

1. **Yield Improvements**
   - Bandgap Accuracy – Trim change to re-center and eliminate yield issue.
   - BST (BST-AC) leakage – Minor changes to improve yield.

2. **Change HVOD threshold from 80%/90% to 90%/95% setting to provide improved set-point resolution & flexibility.** The new settings allow the HVOD to operate closer to the VRECT AMR limits.

   Firmware are being changed to reflect the hardware changes.

   All changes were tested and proper functionality verified at the bench which show no impact in the device's performance.

   Prior revision will no longer be available once the supply is exhausted.
