# **PRODUCT CHANGE NOTICE**

## **Test Site Change for the Listed Intersil Products**

**Refer to:  
PCN14017**

**Date: April 21, 2014**

April 21, 2014

To: Our Valued Intersil Customer

Subject: **Test Site Change for the Listed Intersil Products** – *Carsem (CAS) Ipoh, Malaysia*

This notice is to inform you that Intersil is transitioning the final electrical test, solder dip, visual, Quality Conformance Inspection (QCI) testing and, packing operations for the listed products to the Carsem (CAS) facility located in Ipoh, Malaysia. The current facility STATS ChipPAC (SCM) located in Kuala Lumpur, Malaysia has officially announced plant closure by end of year 2014.

<http://www.statschippac.com/news/newscenter/2013/news06282013.aspx>;

Intersil will migrate from the current facility, STATS ChipPAC (SCM), to Carsem (CAS) upon completion of all transfer activities, TRB approval and DLA notification. The product and site-specific verification activities are scheduled to complete in September 2014.

The Carsem (CAS) facility is ISO 9001:2008 and ISO/TS 16949:2009 certified and currently qualified as a primary supplier to Intersil for high volume testing of Commercial and Industrial packaged products. The following summarizes the activities that will be conducted prior to production release to confirm there is no impact to form, fit, function, or interchangeability of the product.

- Intersil supplied test software and product specific hardware will be used at CAS.
- The test equipment validation plan involves the testing of control units and a correlation lot of select products at the CAS and current facility. The list of products selected as the correlation vehicles for this activity is included on the next page.
  - Control units will be tested at the current test site and retested at CAS, their performance recorded, and the results analyzed to validate the set-up.
  - A correlation lot of approximately 200 units (incl rejects) will be tested at the current test site and retested at CAS. The test results from each site will be compared.
  - Continuous monitoring and comparison of the data from lots processed at multiple sites are an ongoing function of the responsible product engineers.
- The Post Test Operations; solder dip, visual/mechanical and QCI will be audited and confirmed to be compliant to MIL-PRF-38535 and MIL-STD-883 as applicable prior to implementation.

Product affected by this change is identifiable via Intersil's internal traceability system

The Post Assembly qualification plan is designed using MIL-PRF-38535 to confirm there is no impact to form, fit, function, or interchangeability of the product. The remainder of the manufacturing operations (wafer fabrication and assembly) will continue to be processed to previously established locations, conditions and systems.

There is no QML Class V or Radiation Hardened product impacted by this change.

If you have concerns with this notice, Intersil must hear from you promptly. Please contact the nearest Intersil Sales Office or call the Intersil Corporate line at 1-888-468-3774, in the United States, or 1-321-724-7143 outside of the United States.

Regards,

Jeff Touvell
