Description

The iW1608 is a high performance AC/DC power supply controller with output current limit configuration capability that uses digital control technology to build peak current mode PWM flyback power supplies. The device operates in quasi-resonant mode to provide high efficiency and includes a number of key built-in protection features while minimizing the external component count, simplifying EMI design and lowering the total bill of material cost. The iW1608 removes the need for secondary feedback circuit while achieving excellent line and load regulation. It also eliminates the need for loop compensation components while maintaining stability over all operating conditions. Pulse-by-pulse waveform analysis allows for a loop response that is much faster than traditional solutions, resulting in improved dynamic load response. The built-in power limit function enables optimized transformer design in universal off-line applications and allows for a wide input voltage range.

Dialog’s innovative proprietary technology ensures that power supplies built with the iW1608 can achieve both the highest average active efficiency and low no-load power consumption, and have fast dynamic load response in a compact form factor in typical 10W applications. The iW1608 has unique user-configurable light-load operation modes to allow optimization of the system cost and performance according to the application requirements of dynamic load response and no-load power consumption.

The iW1608 allows configuration of output current limit on-the-fly through CFG Pin. For example, CFG pin can be used to detect the input voltage and adjust the output current limit accordingly.

Features

- User-configurable output current limit
- User-configurable light-load operation modes for optimized dynamic load response and no-load power consumption
- No-load power consumption < 30mW at 230VAC with fast dynamic load response in typical 10W compact adapter/charger when a secondary-side controller with Active Voltage Positioning (AVP) function is used (iW676-30)
- No-load power consumption < 75mW at 230VAC along with fast dynamic load response in typical 5V, 2A 10W compact adapter/charger applications without a secondary-side AVP controller
- Tight constant-voltage and constant current regulation across line and load range
- Primary-side feedback eliminates optoisolators and simplifies design
- Intelligent low power management achieves ultra-low operating current (~250μA) at no-load
- Proprietary optimized 89kHz maximum PWM switching frequency with quasi-resonant operation achieves best size, efficiency and common mode noise
- 150mV cable drop compensation
- EZ-EMI® design enhances manufacturability
- Adaptive multi-mode PWM/PFM control improves efficiency
- Complies with CoC Version 5 Tier 2 and DOE level VI energy-efficiency specifications with ample margin
- Built-in single-point fault protections against output short-circuit, output over-voltage and output over-current
- On-chip internal over-temperature protection
- No audible noise over entire operating range
- Space-saving SOT-23 package

Applications

- Compact AC/DC adapters/chargers for media tablets and smart phones
- AC/DC adapters for consumer electronics

RoHS Compliance

Dialog Semiconductor’s suppliers certify that its products are in compliance with the requirements of Directive 2011/65/EU of the European
Parliament on the restriction of the use of certain hazardous substances in electrical and electronic equipment. RoHS certificates from our
suppliers are available on request.
