

NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark. Alternately, a tab (dimension k) may be used to identify pin one.
2. If a pin one identification mark is used in addition to a tab, the limits of dimension k do not apply.
3. This dimension allows for off-center lid, meniscus, and glass overrun.
4. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness. The maximum limits of lead dimensions $b$ and $c$ or $M$ shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
5. $N$ is the maximum number of terminal positions.
6. Measure dimension S1 at all four corners.
7. For bottom-brazed lead packages, no organic or polymeric materials shall be molded to the bottom of the package to cover the leads.
8. Dimension $Q$ shall be measured at the point of exit (beyond the meniscus) of the lead from the body. Dimension $Q$ minimum shall be reduced by 0.0015 inch $(0.038 \mathrm{~mm})$ maximum when solder dip lead finish is applied.
9. Dimensioning and tolerancing per ANSI Y14.5M-1982.
10. Controlling dimension: INCH.
11. The basic lead spacing is 0.050 inch $(1.27 \mathrm{~mm})$ between center lines. Each lead centerline shall be located within $\pm 0.005$ inch $(0.13 \mathrm{~mm})$ of its exact longitudinal position relative to lead 1 and the highest numbered $(\mathrm{N})$ lead.
