
ISL72813SEH

Neutron Test Report

Introduction

This report summarizes results of 1MeV equivalent neutron testing of the [ISL72813SEH](#) 32-channel driver circuit with an integrated decoder. The test was conducted to determine the sensitivity of the part to Displacement Damage (DD) caused by neutron or proton environments. Neutron fluences ranged from $5 \times 10^{11} \text{n/cm}^2$ to $1 \times 10^{14} \text{n/cm}^2$. This project was carried out in collaboration with Honeywell Aerospace and their support is gratefully acknowledged.

Product Description

The ISL72813SEH is a radiation tolerant, high-voltage, high-current driver fabricated using the proprietary PR40 silicon-on-insulator process technology to mitigate single-event effects. This device uses a complementary Darlington output configuration to integrate 32 current drivers that feature high-voltage, common emitter, and open-collector outputs with a 42V breakdown voltage and peak current rating of 600mA.

To further reduce solution size and increase system power density, the ISL72813SEH integrates a 5-bit to 32-channel decoder (plus enable pin) and level shifting circuitry to reference the output of the decoder to a negative voltage. This allows you to select 1 of 32 available current driver channels. The inputs to the decoder are TTL/CMOS compatible allowing easy integration to CPUs, FPGAs, or microprocessors.

The ISL72813SEH operates across the military temperature range from -55°C to $+125^{\circ}\text{C}$ and is available in a 44 Ld hermetically sealed Ceramic Lead-Less Chip Carrier (CLCC) package.

1. Test Description

1.1 Irradiation Facility

Neutron fluence irradiations were performed on the test samples on June 25, 2018, at the WSMR Fast Burst Reactor (FBR) per Mil-STD-883G, Method 1017.2, with each part unpowered during irradiation and all leads shorted. The target irradiation levels were $5 \times 10^{11} \text{n/cm}^2$, $2 \times 10^{12} \text{n/cm}^2$, $1 \times 10^{13} \text{n/cm}^2$, and $1 \times 10^{14} \text{n/cm}^2$. As neutron irradiation activates many of the heavier elements found in a packaged integrated circuit, the parts exposed at the higher neutron levels required (as expected) some cooldown time before being shipped back to Renesas (Palm Bay, FL) for electrical testing.

1.2 Test Fixturing

No formal irradiation test fixturing is involved, as these DD tests are considered bag tests, which means the parts are irradiated with all leads shorted together.

1.3 Radiation Dosimetry

[Table 1](#) shows the TLD and Sulfur pellet dosimetry from WSMR indicating the total accumulated gamma dose and actual neutron fluence exposure levels for each sets of samples. This dosimetry process is traceable to NIST (IAW ASTM E722).

Table 1. ISL72813SEH Neutron Fluence Dosimetry Data

TLD		Sulfur Pellet						
TLD #	cGy(Si)	Pellet #	Distance (inches)	Exposure ID	Flu >3MeV (n/cm ²)	% Unc	Total Fluence (n/cm ²)	1Mev Si (n/cm ²)
291	1.215E+02	6477	26.6	Free Field	7.693E+10	7.1%	6.221E+11	5.35E+11
278	3.918E+02	6414	13.45	Free Field	2.739 E+11	7.1%	2.161E+12	1.92E+12
262	1.796E+03	6487	24	Free Field	1.395E+12	7.1%	1.119E+13	9.68E+12
258	1.770E+04	6483	8	Free Field	1.230E+13	7.1%	9.657E+13	8.63E+13

Notes:

- 1cGy(Si) = 1rad(Si)
- The Uncertainty (% Unc) column is applicable only to the Fluence > 3MeV.

1.4 Characterization Equipment and Procedures

Electrical testing was performed before and after irradiation using the production Automated Test Equipment (ATE). All electrical testing was performed at room temperature.

1.5 Experimental Matrix

Testing proceeded in general accordance with the guidelines of MIL-STD-883 TM 1017. The experimental matrix consisted of five samples irradiated at $5 \times 10^{11} \text{n/cm}^2$, five samples irradiated at $1 \times 10^{12} \text{n/cm}^2$, five irradiated at $1 \times 10^{13} \text{n/cm}^2$, and five irradiated at $1 \times 10^{14} \text{n/cm}^2$. Three control units were used.

ISL72813SEH samples were drawn from Lot X7C0JBEHA. Samples were packaged in the standard hermetic 44 Ld hermetically sealed Ceramic Lead-Less Chip Carrier (CLCC) package. Samples were processed through burn-in before irradiation and were screened to the SMD limits at room, low, and high temperatures before the start of neutron testing.

2. Results

Neutron testing of the ISL72813SEH is complete and the results are reported in the balance of this report. It should be understood when interpreting the data that each neutron irradiation was performed on a different set of samples; this is *not* total dose testing, where the damage is cumulative.

2.1 Attributes Data

[Table 2](#) summarizes the neutron exposure test results.

Table 2. Attributes Data

Fluence, (n/cm ²)		Sample Size	Pass (Note 3)	Fail
Planned	Actual			
5x10 ¹¹	5.35x10 ¹¹	5	5	0
2x10 ¹²	1.92x10 ¹²	5	5	0
1x10 ¹³	9.68x10 ¹²	5	5	0
1x10 ¹⁴	8.63x10 ¹³	5	0	5

Note:

3. 'Pass' indicates a sample that passes all SMD limits.

2.2 Variables Data

The plots in [Figures 1](#) through [13](#) show data plots for key parameters before and after irradiation to each level. The plots show the mean of each parameter as a function of neutron irradiation. The plots also include error bars at each down-point, representing the minimum and maximum measured values of the samples, although in some plots the error bars might not be visible due to their values compared to the scale of the graph. While the applicable electrical limits taken from the SMD are also shown, it should be noted that these limits are provided for guidance only as the ISL72813SEH is not specified for the neutron environment.

All samples passed the post-irradiation SMD limits after all exposures up to and including 1x10¹³n/cm², and although the parts were still functional, many parameters failed the SMD post-irradiation limits after 1x10¹⁴n/cm².

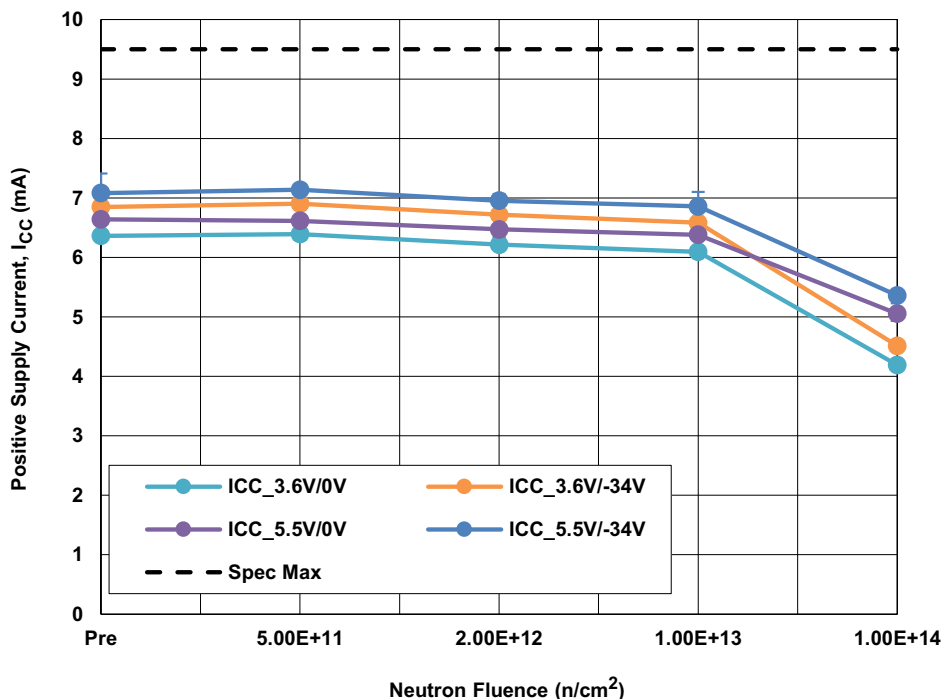

Figure 1. ISL72813SEH supply current (I_{CC}) at $V_{CC} = 3.6V$ and $5.5V$ and $V_{EE} = 0V$ and $-34V$ as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is 9.5mA maximum.

Figure 2. ISL72813SEH quiescent supply current (I_{CCQ}) at $V_{CC} = 3.6V$ and $5.5V$ and $V_{EE} = 0V$ and $-34V$ as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is $0.85mA$ maximum. Note: The $V_{EE} = 0V$ and $-34V$ lines are coincident.

Figure 3. ISL72813SEH negative supply current (I_{EE}) at $V_{CC} = 3.6V$ and $5.5V$ and $V_{EE} = -34V$ as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is $-45mA$.

Figure 4. ISL72813SEH quiescent supply current (I_{EEQ}) at $V_{CC} = 3.6V$ and $5.5V$ and $V_{EE} = -34V$, as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is $-0.10mA$.

Figure 5. ISL72813SEH output collector leakage current (I_{CEX}) at $V_{CC} = 3V$ and $5.5V$ and $V_{EE} = -34V$, as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is $40nA$ maximum. Note: This limit is set by temperature, typical $25^{\circ}C$ values are $0.01nA$.

Figure 6. ISL72813SEH collector emitter saturation voltage ($V_{CE(Sat)}$) with $V_{CC} = 3V$ and $4.5V$ with $I_C = 530mA$, as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is 1.5V maximum.

Figure 7. ISL72813SEH collector emitter saturation voltage ($V_{CE(Sat)}$) with $V_{CC} = 3V$ and $4.5V$ with $I_C = 500mA$, as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is 1.45V maximum.

Figure 8. ISL72813SEH collector emitter saturation voltage ($V_{CE(Sat)}$) with $V_{CC} = 3V$ and $4.5V$ with $I_C = 350mA$, as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is $1.4V$ maximum.

Figure 9. ISL72813SEH collector emitter saturation voltage ($V_{CE(Sat)}$) with $V_{CC} = 3V$ and $4.5V$ with $I_C = 200mA$, as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is $1.3V$ maximum.

Figure 10. ISL72813SEH high-level threshold (V_{IH}) and low-level threshold (V_{IL}) voltages at $V_{CC} = 3V$ and $5.5V$ as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limits are 2V minimum for V_{IH} and 0.8V maximum for V_{IL} .

Figure 11. ISL72813SEH input high current (I_{IH}) and input low current (I_{IL}) at $V_{CC} = 3V$ and $5.5V$, with tested logic input = 2V, as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is -500nA.

Figure 12. ISL72813SEH enable turn-on time (t_{EN}) at $V_{CC} = 3.0V$ and $5.5V$, with $V_{EE} = -34V$ and $R_{LOAD} = 64\Omega$ as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is $10\mu s$ maximum.

Figure 13. ISL72813SEH disable turn-off time (t_{DIS}) at $V_{CC} = 3.0V$ and $5.5V$, with $V_{EE} = -34V$ and $R_{LOAD} = 64\Omega$ as a function of neutron dose to each level. $V_{CC} = 5.5V$ as a function of neutron dose to each level. The error bars, if visible, represent the minimum and maximum measured values. The SMD limit is $50\mu s$ maximum.

3. Discussion and Conclusion

This document reports the results of 1MeV equivalent neutron testing of the ISL72813SEH 32-Channel Driver Circuit with an Integrated Decoder. Parts were tested at $5 \times 10^{11} \text{n/cm}^2$, $2 \times 10^{12} \text{n/cm}^2$, $1 \times 10^{13} \text{n/cm}^2$, and $1 \times 10^{14} \text{n/cm}^2$. The results of key parameters before and after irradiation to each level are plotted in [Figures 1](#) through [13](#). The plots show the mean of each parameter as a function of neutron irradiation, with error bars that represent the minimum and maximum measured values. All samples passed the SMD limits after all exposures up to and including $1 \times 10^{13} \text{n/cm}^2$, but failed many parameters after $1 \times 10^{14} \text{n/cm}^2$ although the parts were still functional. Although the figures show the applicable electrical limits taken from the SMD, it should be remembered that these limits are provided for guidance only as the ISL72813SEH is not specified for the neutron environment.

4. Appendices

4.1 Reported Parameters

Limits are taken from Standard Microcircuit Drawing (SMD) 5962-17208.

Table 3. Reported Parameters

Figure	Parameter	Symbol	Low Limit	High Limit	Units	Conditions
1	Supply Current	I_{CC}	-	9.5	mA	$V_{CC} = 3.6\text{V}, V_{EE} = 0\text{V}, C_x = \text{OPEN}, EN = V_{CC}$
						$V_{CC} = 3.6\text{V}, V_{EE} = -34\text{V}, C_x = \text{OPEN}, EN = V_{CC}$
						$V_{CC} = 5.5\text{V}, V_{EE} = 0\text{V}, C_x = \text{OPEN}, EN = V_{CC}$
						$V_{CC} = 5.5\text{V}, V_{EE} = -34\text{V}, C_x = \text{OPEN}, EN = V_{CC}$
2	Quiescent Supply Current	I_{CCQ}	-	850	μA	$V_{CC} = 3.6\text{V}, V_{EE} = 0\text{V}, C_x = \text{OPEN}, EN = 0$
						$V_{CC} = 3.6\text{V}, V_{EE} = -34\text{V}, C_x = \text{OPEN}, EN = 0$
						$V_{CC} = 5.5\text{V}, V_{EE} = 0\text{V}, C_x = \text{OPEN}, EN = 0$
						$V_{CC} = 5.5\text{V}, V_{EE} = -34\text{V}, C_x = \text{OPEN}, EN = 0$
3	Supply Current	I_{EE}	-45	-	mA	$V_{CC} = 3.6\text{V}, V_{EE} = -34\text{V}, C_x = \text{OPEN}, EN = V_{CC}$
						$V_{CC} = 5.5\text{V}, V_{EE} = -34\text{V}, C_x = \text{OPEN}, EN = V_{CC}$
4	Quiescent Supply Current	I_{EEQ}	-100	-	μA	$V_{CC} = 3.6\text{V}, V_{EE} = -34\text{V}, C_x = \text{OPEN}, EN = 0$
						$V_{CC} = 5.5\text{V}, V_{EE} = -34\text{V}, C_x = \text{OPEN}, EN = 0$
5	Output Collector Leakage Current	I_{CEX}	-	40	nA	$V_{CC} = 3.6\text{V}, V_{CX} = 0\text{V}, V_{EE} = -34\text{V}, EN = 0\text{V}$
						$V_{CC} = 5.5\text{V}, V_{CX} = 0\text{V}, V_{EE} = -34\text{V}, EN = 0\text{V}$
6	Collector Emitter Saturation Voltage $V_{CE(SAT)} = V_{CX} - V_{EE}$	$V_{CE(SAT)}$	-	1.5	V	$I_C = 530\text{mA}, V_{CC} = 3.0\text{V}, V_{EE} = -34\text{V}, EN = V_{CC}$
						$I_C = 530\text{mA}, V_{CC} = 4.5\text{V}, V_{EE} = -34\text{V}, EN = V_{CC}$
7			-	1.45	V	$I_C = 500\text{mA}, V_{CC} = 3.0\text{V}, V_{EE} = -34\text{V}, EN = V_{CC}$
						$I_C = 500\text{mA}, V_{CC} = 4.5\text{V}, V_{EE} = -34\text{V}, EN = V_{CC}$
8			-	1.4	V	$I_C = 350\text{mA}, V_{CC} = 3.0\text{V}, V_{EE} = -34\text{V}, EN = V_{CC}$
						$I_C = 350\text{mA}, V_{CC} = 4.5\text{V}, V_{EE} = -34\text{V}, EN = V_{CC}$
9			-	1.3	V	$I_C = 200\text{mA}, V_{CC} = 3.0\text{V}, V_{EE} = -34\text{V}, EN = V_{CC}$
						$I_C = 200\text{mA}, V_{CC} = 4.5\text{V}, V_{EE} = -34\text{V}, EN = V_{CC}$
10	High-Level Threshold	V_{IH}	2	-	V	$V_{CC} = 3.0\text{V}$
						$V_{CC} = 5.5\text{V}$
	Low-Level Threshold	V_{IL}	-	0.8	V	$V_{CC} = 3.0\text{V}$
						$V_{CC} = 5.5\text{V}$

Table 3. Reported Parameters (Continued)

Figure	Parameter	Symbol	Low Limit	High Limit	Units	Conditions
11	Input High Current	I_{IH}	-500	-	nA	$V_{CC} = 3.0V$, Tested Logic Input = 2.0V
						$V_{CC} = 5.5V$, Tested Logic Input = 2.0V
	Input Low Current	I_{IL}	-500	-	nA	$V_{CC} = 3.0V$, Tested Logic Input = 0.8V
						$V_{CC} = 5.5V$, Tested Logic Input = 0.8V
12	Enable Turn-On Time	t_{EN}	-	10	μs	$V_{CC} = 3.0V, 5.5V, R_{LOAD} = 64.4\Omega$
13	Disable Turn-Off Time	t_{DIS}	-	50	μs	$V_{CC} = 3.0V, 5.5V, R_{LOAD} = 64.4\Omega$

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.
6. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
11. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
