Description

The F6101 is an 8-channel receiver silicon IC designed using a SiGe BiCMOS process for Ku-Band SATCOM phased array applications. The core IC has 6-bit phase control coupled with more than 30dB gain control on each channel to achieve fine beam steering and gain compensation between channels. The device has 15.5dB nominal electric gain and -23dBm IP1dB. The core chip achieves an RMS phase error of 2.5° and RMS gain error of 0.25dB over the frequency of operation. The typical total power consumption is 0.34W (43mW per channel).
