### Notes on Using Event Link Controller (ELC) for RX210

1. **Notes**

   When "RSPI0 transmit end signal" is selected as an event signal for the ELC (the ELSRn register value is 56h), the event signal may not be relayed to the corresponding peripheral module.

2. **Measure**

   When "RSPI0 transmit end signal" is selected as an event signal for the ELC (the ELSRn register value is 56h), select SPI operation (SPCR.SPMS = 0) or master mode (SPCR.MSTR = 1) for RSPI0.
