Note on Using CubeSuite+

When using CubeSuite+, take note of the following problem:

- With converting projects created by High-performance Embedded Workshop to those for CubeSuite+
-

1. Products Concerned

- The CubeSuite+ whose common programs are of V1.02.00
- The evaluation editions of CubeSuite+ whose common programs are of V1.02.00

2. Description

If projects for the SH, R8C, M16C, H8SX, H8S, or H8 family of MCUs created by High-performance Embedded Workshop are read into any of the CubeSuite+ concerned as projects for the V850, RX, or RL78 family of MCUs, the following error message appears, and no projects can be converted to those for CubeSuite+:

Error (E0202002)
Opening a project failed.

[Direct Error Cause]

The project uses an unsupported toolchain: Toolchain ***(E0292005)

NOTE: The symbol *** denotes the character string representing the MCU family involved.

3. Solution

We plan to fix this problem in the next version of the common program to the CubeSuite+ (to be published on July 2012).

If you need to take measures against this problem up to the above time, please consult your local Renesas Electronics marketing offices or distributor.
