The Emulator Debugger--M3T-PD72M--Specific to the Compact Emulator for the 720 Series Revised to V.1.01 Release 00

We have revised the emulator debugger M3T-PD72M, specific to the compact emulator for the 720 series, 720 MCU family, from V.1.00 Release 02 to V.1.01 Release 00.

1. Descriptions of Revision

(1) The revised product can be used with the M34286T2-CPE, the compact emulator for the 4286 group of MCUs.

The M34286T2-CPE (released on Sep. 1) has bundled with the M3T-PD72M V.1.01 Release 00.

(2) The data file of the M34286G2 MCU has been introduced.

(3) The compact emulator with which you want to use the revised product can be selected from the pull-down list.

(4) A system clock can be selected from the pull-down list in the Init dialog box.

(5) In the program for 4286 group of MCUs, any of the instructions for changing system clocks (the CCK instruction and so on) can be placed anywhere.

In the ASM72 assembler included with the revised product, the specification of the 4286 group of MCUs has been added.

2. How to Update Your Product

Download the installer of the M3T-PD72M V.1.01 Release 00 from the Web site at:

http://www.renesas.com/m34282t2_cpe_download

Then execute it.

If you are using the M34282T2-CPE compact emulator and you see "2008.09.01" on the surface of the CD-ROM that is included with the emulator, the CD-ROM contains M3T-PD72M V.1.01 Release 00. So install

M3T-PD72M on your PC. (Online update is unnecessary.)

How to Check the Version Number of M3T-PD72M

Open the Help menu and select About. In the Version dialog box that appears, the version number of M3T-PD72M will be displayed.
