RENESAS Tool News

Hardware Tool Released in February 2014

We released the optional product for the E1 emulator described below this February.

1. For MCUs of RH850 and RL78 Families

Isolator for the E1 emulator R0E000010ACB20

The R0E000010ACB20 is an isolator for the E1 emulator. It is used to debug your systems under the condition where a potential difference exists in between the GND pins of the user and emulator systems.

NOTE:
For using the isolator together with systems designed with MCUs of the RH850 family, CubeSuite+ V2.02.00 or later is necessary.
The marketing of CubeSuite+ V2.02.00 will start in April 2014.

For details of the product, see the user's manual on the Web page from here.

2. Ordering information

Product name	Orderable part number
R0E000010ACB20	Same as left
