A New MCU Group Supported by Compact Emulator M34282T2-CPE

We have added a new MCU group to the line supported by the M34282T2-CPE compact emulator.

1. ## Description

    The M34282T2-CPE, which emulates the 720 series MCUs, newly supports the MCU shown in the table below. The table also lists the MCU data file involved.

MCU Group	MCU	MCU Data File
4283	M34283G2GP	M34282M2.DAT *

    NOTE:

    * Though this MCU data file is for the 4282 group which has already been supported, it can also be used for the 4283 group of MCUs.

    To debug any MCU in the above MCU group, you need not update your M34282T2-CPE.
