Sample Project of Real-time OS RI850MP for V850E2M Dual core Updated (Supported by CubeSuite+)

We have updated the sample project included with the real-time OS RI850MP for V850E2M Dual Code.

1. Product and Version Concerned

Real-time OS RI850MP for V850E2M Dual Core V1.00.01

2. Description

The following 2 points were updated in a sample project of RI850MP.

2.1 Deletion of .entry Section (only in CubeSuite+ Version)

The .entry section was deleted as it was not being used.

2.2 Change to a Variable Type

Name of the concerned file: usrown.c

When the target dependent functions listed below were used in the concerned file, an interrupt request generated during issuing of a `dis_int()` or `ena_int()` service call would be cancelled in some cases if the factor number of the request corresponded to a parameter specified by the service call. This problem was resolved in the updated sample project.

```
_kernel_usr_dis_int(INTNO intno)  
_kernel_usr_ena_int(INTNO intno)
```

3. Updating Your Product

Online updating is available free of charge. To update yours, download the updating program of the product and its manual from:

https://www.renesas.com/ri850mp_download

Then follow the instructions on the manual to update yours.

This Web site will be opened on November 6.
