

HI-201HS/883

High Speed Quad SPST CMOS Analog Switch

FN8265
Rev.0.00
April 9, 2012

The HI-201HS/883 is a monolithic CMOS analog switch featuring very fast switching speeds and low ON resistance. This integrated circuit consists of four independently selectable SPST switches and is pin compatible with the industry standard HI-201 switch.

Fabricated using silicon-gate technology and the Intersil dielectric isolation process, this TTL compatible device offers improved performance over previously available CMOS analog switches while eliminating the problem of latch-up associated with other fabrication processes. Featuring maximum switching times of 50ns, low ON resistance of 50Ω maximum, and a wide analog signal range, the HI-201HS/883 is designed for any military application where improved switching performance, particularly switching speed, is required. (A more detailed discussion on the design and application of the HI-201HS/883 can be found in Application Note [AN543](#).)

The HI-201HS/883 is available in a 16 Ld CerDIP package and is specified over the temperature range of -55 °C to +125 °C.

Features

- This Circuit is Processed in Accordance to MIL-STD-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- Low “On” Release 50Ω Max
- Wide Analog Signal Range ±15V
- Turn-On Time 50ns
- Analog Current Range (Continuous) 25mA
- TTL/CMOS Compatible
- No Latch-Up
- Pin Compatible with Standard HI-201

Applications

- High Speed Multiplexing
- High Frequency Analog Switching
- Sample and Hold Circuits
- Digital Filters
- Op Amp Gain Switching Networks
- Integrator Reset Circuits

NOTE:

- Parameters listed in Table 3 are controlled via design or process parameters and are not directly tested at final production. These parameters are lab characterized upon initial design release, or upon design changes. These parameters are guaranteed by characterization based upon data from multiple production runs which reflect lot to lot and within lot variation.

NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH.
