RENESAS Tool News

The Document Updater Revised to V.1.20.04

We have revised the Document Updater from V.1.20.03 to V.1.20.04. This utility, based on information about the target MCU selected at creating a workspace on the High-performance Embedded Workshop, shows the documents related to the target MCU that have been published on Renesas's Web site via Internet.

1. **Supporting Compiler Packages**
   The Document Updater is supported by the following compiler packages:

   (1)   C/C++ compiler package for the SuperH RISC engine
         family V.9.00 Release 04 and later

   (2)   C compiler package for the M32C/90, M32C/80, and
         M16C/80 series M3T-NC308WA V.5.40 Release 00 and
         later

   (3)   C compiler package for the M16C/60, M16C/30, M16C/20,
         M16C/10, M16C/Tiny, and R8C/Tiny series M3T-NC30WA
         V.5.40 Release 00 and later

   The Document Updater can be used together with the evaluation versions of the above compiler packages.
   For the compiler packages other than the above, we are going to make them support the Document Updater one after another when they are revised.
   → June 1, 2006: Supporting C/C++ compiler package for the H8SX, H8S, H8 family V.6.01 Release 02 and later

2. **Descriptions of Revision**

   (1)   Function for identifying proxy servers introduced.
         The Document Updater is invoked by using the proxy
         server settings in Internet Explorer. So, if the ID and
         password for identifying the proxy server is needed, the
         Document Updater cannot be invoked.
         In the Document Updater V.1.20.04, Opening the Help

menu and selecting the Proxy Settings command after invoking the updater opens a dialog box, into which you can enter information on the proxy server manually.

(2)   Directory modified to which are downloaded PDF files selected in the Document that required update tab.
The PDF files downloaded using the Document Updater are usually saved in
   C:¥Program Files¥Renesas¥Documentupdater¥RenesasManual
On the other hand, the PDF files selected in the Document that required update tab are downloaded to
   C:¥Program Files¥Renesas¥Documentupdater
In the Document Updater V.1.20.04, all the PDF files are downloaded to the following directory:
   C:¥Program Files¥Renesas¥Documentupdater¥RenesasManual

(3)   Web information always accessed in order not to be affected by the network cache.
Because the previous V.1.20.03 accesses the network cache to obtain information, the latest one cannot be obtained in some cases.
The Document Updater V.1.20.04 always accesses Renesas's Web information; not the network cache.

3. **How to Update Your Product**

Free-of-charge online update is available. If you are using the product concerned, download the executable file of the Documewnt Updater V.1.20.04 from the following download sites of the supporting compiler packages:

(1)   C/C++ compiler package for the SuperH RISC engine family

(2)   C compiler package for the M32C/90, M32C/80, and M16C/80 series

(3)   C compiler package for the M16C/60, M16C/30, M16C/20, M16C/10, M16C/Tiny, and R8C/Tiny series

The compiler packages (2) and (3) above can detect the Document Updater by the auto-update utility. If it is detected, download it by following the instructions of the auto-update

utility.

We plan to provide the compiler package (1) above with the auto-update utility in its next release.
